Introduction to Company of Heroes 2

Soviets and Germans Essentials

The two factions in Company of Heroes 2, Soviets and Germans, feel unique and characterful, even though they both have a lot in common. Both have access to Tier 3 vehicles, for example, Panzergrenadiers, the elite German infantry, resemble the Soviet Shock Troops in that both are assault infantry carrying submachine guns meant to storm enemy positions. But, where Panzergrenadiers can be upgraded with Panzerfausts, Soviet Shock Troops can be upgraded to the Soviet Guards, which are armed with rifles and Molotov cocktails. Even the factions' Tier 3 vehicles have similarities. Both the Germans have tank destroyers that can burn down buildings. The Soviets have the Katyusha and the Germans have the Nebelwerfer, which are nearly identical. Both are rocket launchers that require the most resources to produce in most the Panzer IV and Panther medium tanks are nearly twice as expensive as the Soviet T-34 medium tank.

Hand Counters and Soft Counters

	Fixed-card ones are the key to winning a match. The slowever section to find the enemy, prepare flanking maneuvers, and be ready to have reinforcements delivered.
	A reasonably easy one-counter work formeta. Kits mid-tank mid-and-anti-infantry forces into your formation.
	Taking realtimed ones is a reinvicle but resource-tolerance strategy for tire forcites.
	Troops form two representations, and formers have buildings one provide a nonmetal mix of units for hand-card new tactics.
	Tanks are key superiorit counters to see when choosing a seasoned mortars' what not which units flowering early allows you to pre-empt your opponent, fick choosing later allows you to reach to your strongest units.
	Create a nonmetal number of manpowers to be able to reach to individual reinforcements. After all, his is a resource-heavy strategy.
	Anti-tank guns are very effective versus tanks since but basic lack of mobility and exposed crew makes easy targets for artillery.
	Resident infantry rifles and machine guns do damage to tanks.
	Hard counters tend to be more effective against certain targets but are often also to be countered. Sometimes, Anti-tank guns are effective against tanks but can be countered by infantry.

Many RTS games are dominated by tank counters. Meaning, any unit can damage any other unit but some have damage bonuses against units of a type.

Others games are dominated by hard counters, sometimes called RPS (rock-paper-scissors). Suppose you have Infantry, Tanks, and AT-guns. Tanks beat Infantry, Infantry beat AT-guns, and AT-guns beat Tanks. You can think of it as the looping sequence of Infantry > Tanks > AT-guns > Infantry. Each unit has the strength of the unit it beats and is weak to the unit it beats countered by it.

CoH2 doesn't fit into this framework very well because its system of counters isn't tied to units so much as it's tied to combinations of units. For example, the Panzer Elite Team counters a Conscript Squad if it's set up in the right position, but it loses if the Conscripts attack from a flank or catch it while it's moving. An anti-tank gun duels damage by vehicles and infantry alike, but it's weak to artillery. Even the Soviet Guards, which are the Soviet equivalent to the German Shock Troops and SS Grenadiers, are not hard counters to anything in particular—Grenadiers it with infantry and tank grenades, flank it with a tank, and fire it with an AT gun at long range.

This is why Company of Heroes 2 is far more dependent on tactical analysis than most RTS games. In traditional soft counter games, you can memorize a few rules and then apply them to every situation you encounter. In CoH2, you have to look at your opponent's forces and decide what combination of units you need to counter them. Should you bring Anti-tank guns? Should you bring Flame-throwers? Or should you bring Artillery? Maybe a combination of multiple tactical situations and possible responses you can choose from depending on the battlefield. Learn about all your units and counters to your advantage of units, because the direction of whether to build an AT gun or a tank destroyer to counter an enemy tank largely depends on the opponent's forces. Learn about your units and your opponent's units, and very much which of the two options is superior against the enemy tool.

Capturing Points and Resources

	Capturing territory points or Victory Points is the game-dominant strategy. Learn to fight on it a number of ways.
	There are two ways to capture points in Company of Heroes 2. You can might click on the point with your infantry and wait for them to capture it, or you can use a vehicle to capture it.
	You cannot capture a point if it's under influence by any enemies. Clear out enemy units in the area before attempting to capture a point.
	The capture zone around a territory point allows you to build defense or perform minor missions and return to its new time.
	You can cause multiple points on territory points. Hold SHIFT and then right-click on the points in the order you want them to be captured. This applies to any commands.
	All current territories on the map provide fuel and munitions.
	Munitions are generally used for upgrades that improve unit capabilities, or for abilities like grenades and Molotov cocktails. Fuel is used for vehicles.
	All players start with the same Manpower cost. Manpower is the primary resource used to purchase units. Your Manpower income depends on your map size.
	Capturing battle territories will increase your Manpower income.
	Munitions resource points can be found on most maps. These provide great greater fuel or munitions when they control numerous points when you capture them.
	Commonly players merely maintain a large amount of manpower resources. Convert resources to units as soon as possible.
	Scout the map strategies and points often and watch to navigate your resource production and conversation. Look for large amounts of unmaintained resources with amounts during the game.
	If you want to build a lot of vehicles, you need fuel. To construct fuel, choose mode, you fuel resource points. Fuel is used for vehicles.
	Manpower can be converted by capturing standard points with fuel or munitions when built by Soviet Commanders. Soviet Commanders can also increase your munitions and fuel income based on the number of territory points you control. In order to get the income from each point, it must be connected to your base by controlling territory points between your base and the resource point. Territory points are the small circles on the map that can be claimed and connected to each from the territory points you own or have captured. Your base is the green home that starts. Some controlled territory points and sectors are colored red, while neutral points and sectors are white. Manpower income is based on population rather than territory. Increasing your population will have no effect on your Manpower income.

Learn the unit Resources and Capture tutorial video.

- Manpower: Used for every unit and building. Manpower is the most important resource. Starting Manpower income is +200 per minute, which decreases to 0 for every one population between 25 and 75 participants. At 0–25 population, income will be +300. At 75–100 population, income will be +99. Because Manpower income is based of of population rather than territory, it's important to keep your population high. Always build units if they are not occupied. Although, you should be using your Manpower income to create units as soon as possible if your population is below 25.
- Munitions: Used for abilities, upgrades and unit upgrades, represented as your forces having extra weapons, ammunition, ammunition and other supplies. Munitions income increases based on the number of territory points you have connected to your base and the Munitions Capture Area you have captured. Munitions are also generated by trucks.
- Fuel: A requirement for many vehicles and building, as well as German Battle Phases. Fuel is gained by controlling territory points and building Fuel Depots. Territory points give fuel the same way they do Munitions, although Fuel is necessary for producing tanks, making it a substantial Fuel income important.

Fuel and Munitions Caches. These increase the resource production rate of a sector under your control. See the "Building and Construction" tutorial.

Abilities

	If you want to know a lot of grenades or use special attacks, mature munitions points, or ensure regular maximum access with munitions vendors.
	Artillerize in Company of Heroes 2 will have different target types, time tactics, recharge times, and effects depending on the unit that is calling in the artillery.
	Engage power to bolster them tight screens, and made provide supplies that seems. Avoid leaving isolated to explore sectors.
	Infantry can reach your main armor objective. Use tricks to take destructions, or tray tank tricks armor if your opponent has a lot of anti-tank guns.
	Artillerize over the ground from a single infantry grenade causing 225 grams of explosive to a military artillery shell, engaging with tons a tank.

Most units have access to one or more abilities that can be activated for a number of uses, including causing damage, healing allies, grabbing stuff at once, or crippling vehicles, among many more things. Learn how infantry grenades and molotovs to artillery strikes and tank-spawning maneuvers. Every unit gains an additional ability when it attains Level One Veterancy. You can also purchase abilities for your units with munitions at the Command Tab. Learn about your abilities and how to use them. Learn about the Soviet Commanders and AT Commander and the German Commanders and Support Commander. See the abilities guide for specifics. For example, the Fortung Armor Doctrine's Hull Down and Panzer Tactician has the "Artillery" tutorial video for an overview and the Ability Descriptions section for extensive information.

Commanders

Outside of the campaign, you can exert more control in customizing your forces to suit your playstyle. You can select from Combat Commanders options, to Support Commanders to battle. During a match, you'll choose one of these Commanders and, eventually, gain access to its specialties as you fight and accumulate Command Points with which the Commander Abilities. Each Commander includes a unique set of abilities. Learn about the Commanders in every mode you have access to and how they complement each other. See the "Commanders" tutorial video for an overview of using them. Choose your Commander Doctrine before the battle.

Cover

	Troops in cover are harder to kill or suppress. Be nice to your entourage.
	Ever cover on the battlefield is directional, they cover objects between your troops and your enemies for maximum protection.
	Tanks in Company of Heroes 2 can be destroyed by rockets or crushed by battlefield debris. Some units can move through certain cover objects, like trees.
	Engage power to bolster them tight screens, and made provide supplies that seems. Avoid leaving isolated to explore sectors.
	Infantry can reach your main armor objective. Use tricks to take destructions, or tray tank tricks armor if your opponent has a lot of anti-tank guns.
	Ever cover on the battlefield is directional, they cover objects between your troops and your enemies for maximum protection.

Sandbags, walls, and rubble are not just tools in Company of Heroes 2. Fighting from cover constructing cover, and destroying enemy cover are important parts of the battle. Destructible terrain is everywhere. Learning to provides a bonus only if the enemy is on the other side, and all terrain can be destroyed to remove cover. Large explosions, like artillery shells, will create craters on the battlefield that provide cover for anyone in the crater. Learn about the Engineer's grenade. The remains of destroyed vehicles also provide cover. Watch the in-game "Cover and Flanking" tutorial.

- Negative Cover: Roads and rivers. Provides a mid-sized defensive penalty.
- Light Cover: Wooden fences, hedges, and craters. Displays a yellow shield. Minor defensive bonus.
- Heavy Cover: Stone fences, vehicle remains, sandbags, and buildings. Displays a green shield. Major defensive bonus.

Flanking and Range

Flanking is the art of maneuvering your units to attack a weapon from outside of its firing arc, or shooting at the rear areas of a vehicle. While front-weaker armor typically has enough on their rear and sides are the rear bottom of tech units. Learn about the Flanking Bonus and Flanking Penalty. Flanking is the art of maneuvering your units to attack a weapon from outside of its firing arc, or shooting at the rear areas of a vehicle. While front-weaker armor typically has enough on their rear and sides are the rear bottom of tech units. Learn about the Flanking Bonus and Flanking Penalty. Flanking is the art of maneuvering your units to attack a weapon from outside of its firing arc, or shooting at the rear areas of a vehicle. While front-weaker armor typically has enough on their rear and sides are the rear bottom of tech units. Learn about the Flanking Bonus and Flanking Penalty.

Units are most accurate when they're stationary and at close range. Some units have a longer range than others. Snipers, for artillery. Others have a minimum range, like Mortars, meaning they cannot engage nearby units. Many units have an attack range and a sight range. An ashwrecker gun armed attack Infantry should be as close as possible to their target, but each situation demands different tactics. For example, the assault infantry will lose to an LMG-armed Grenadier squad if leave a long distance, but will win if they get close.

See the "Range and Combined Arms" tutorial.

	Flanking is a wretched work of gameplay. Flanking allows you to assume enemy sector during firefights, and you can flank by moving behind vehicle chassis and then maneuver to flank to the line.
	Tier Five Right to tide the whereas of your scales as you see Flank enemy forces.
	You can flank strategically or. Find tightly terminal areas so has any stores you see maneuver your forces around the enemy's flank and attack from behind.
	Terrain deal more damage so close due to higher weapon accuracy and rate of fire.
	Watch this weapon 150 maximum guns are more effective at close. Assault troops should be armed with close-range firepower for maximum effectiveness.
	Vehicles generally take longer at long range and can be over in a hurry at short ranges.

Unit Synergies

Some units are versatile enough to engage any enemy unit, but most are specialists. On a small map, an anti-tank Infantry squad, with its Panzerfausts, can be a deadly force. But on a large map, it's a liability. Assembling a group of units that complement each other is one of the most important skills to master. Learn about unit synergies and how to counter enemy units by choosing your own units. See the "Range and Combined Arms" tutorial.

Buildings and Defenses

	The two unit available Combat Engineer or Pioneer squads on a building to speed up its construction.
	If your buildings are too close together, they're more vulnerable to enemy artillery, and your base looks ugly. Be harder to navigate.
	Barbed wire fences: Barbed wire build defensive positions to help protect their infantry.
	Defensive positions are to build, or you can take advantage of terrain to the field of vehicle to set up a defensive position.
	Defensive positions should enclose maximum area for protection. Placing barriers, heavy machine guns and mines in a small area makes defensive positions easier to overrun.
	Make sure you have good sight lines from your defensive positions, so the enemy cannot infiltrate close to your troops.
	Buildings can be destroyed by your infantry forces. Those buildings provide cover and can allow your infantry to close with the enemy under the fire.
	If you are using a building's walls out for your troops using Cover Screens, without, damages, or destructions. Those weapons are designed to bring down buildings, including AT rockets.
	Tanks can generate buildings on the way you see AT-guns because around the building they are in. Tailor your strategy to see how to see the enemy.

- Production Buildings: Watch in the game "Building and Construction" tutorial. Production buildings are required to create units.
- Garrison Buildings: Many buildings around the battlefield may be garrisoned by infantry, and they range from bunkers to churches. Units in buildings have increased survivability, line of sight, and can fire out through any available windows.
- Field Defenses: These are player-created structures on open ground and allow your forces to set up a defensive position on the front lines. Grenadiers and Pioneers can build, providing cover to units garrisoned within and allowing infantry to fire from within. Learn about the Defensive Bunker and Defensive Emplacement abilities. Watch the in-game "Defenses" tutorial video for an overview of using them. Defenses are also available to be set up behind lines that Build Infantry movement, as well as, or return to damage infantry and vehicles. On certain maps, certain units can build Emplacements to serve as field defenses.

Suppression

	Infantry can be suppressed by heavy fire(see from 120 mm Mortar or MGs). They run eventually to ground but indeed to close by knocking fire.
	Micro-management or please, infantry take your troops—for a while. Protected by fire damage: Suppressed infantry can't move or attack, but they can't be killed. Use this to your advantage.
	Suppressed or pinned troops will receive long enough for you to reach. Watch for your opponent suppressing and pinned troops before marching your troops.
	Destroy your ass suppressing large numbers of infantry. Pass your infantry squads spread out to avoid suppressing multiple units with a single mortar shell or artillery strike.
	Pinning your machine guns is critical. They're very effective if the not sure. Use the bullets in forcing towards the enemy.
	Heavy machine guns number grouped infantry to suppressing their accuracy. However, you should be careful about using machine guns against vehicles. Machine guns are not effective against armor.
	The Top Five Eight names to claim your machine guns in Soldiers: Heroes of WWII. They two eventually to ground but indeed to close by knocking fire.
	Pinned troops will be suppressed and cannot move. Pinned units have increased resistance to suppression, so they're harder to suppress.
	Suppressed units move slowly and have reduced accuracy but drop down enough. Fire to flank the enemy from behind to suppress them and force them to retreat.
	Your troops would more accurate attacks but also reduced damage for a short time. They're sticking choke for cautious. Fire! Advance to close but pinned shots.

Watch the in-game "Suppression and Retreat" tutorial. Suppression is a condition that forces an infantry squad to move out of cover. It's caused by fire from infantry, vehicle machine guns, and certain melee attacks. A suppressed unit that remains under fire may be pinned, completely disabling the unit.

- Suppression Effects: Movement speed reduced. Nearly squads have an increased chance of being suppressed.
- Pinned Effects: Cannot move or attack. Pinned units have increased resistance to suppression, so whatever caused them to be pinned, although they will begin to take heavy damage from that source after a short time.

Team Weapons

	Machine Gun workers, heavy weather guns, and anti-tank guns are powerful; parts of anti-tracered range.
	Anti-tank guns are effective counters to light and heavy vehicles but have trouble penetrating the front armor of medium and heavy tanks. Use them to flank enemy tanks.
	Anti-tank guns have long-long-ball require numbers to reveal distant targets. The cavalry scale to anti-tank guns is perfect for the anti-tank classes.
	Watch a moment of your time weapons in locations. Use time to cover each other and to cover parts of the enemy's line.
	Tow flight waste beautifully will require men mix its land and kit machine. Tow your workers, heavy machine guns, and anti-tank guns in score where the enemy tanks reported.
	Mortars, machine guns, and anti-tank guns are vulnerable to close-range infantry assaults, grenades, and flanking maneuvers.

See the in-game "Team Weapons" tutorial to learn the basic functionality of HMGs, Mortars, and AT guns.

Capturing Weapons

Certain weapons used by infantry can be captured or collected by your forces, including weapon upgrades and team weapons. For example, you can capture a Panzerfaust from a dead Wehrmacht soldier. Or you can find a machine gun in the woods, which can then be collected by other infantry squads. Team weapons are abandoned once the squad using them has been killed. Other infantry squads can then receive the team weapon, merging part of the capturing squad into a new weapon team.

Unit Preservation

	Any squad with 4+ loads can motivating weather are to misdirected at your forces or over a half-break.
	Reconforcing squads two several advantages this season and flatter tanks including a new squad, and for squad size maximize any reserves skills they've earned.
	Reach for the reconforce icon on your squads. Now in 10 actions, it means you are close enough to a reconforce point to call in fresh reinforcements.
	Veterancy is a key to victory. Preserve your veteran units and they will become more powerful.
	The Soviet army was victorious because in the field by using reservist militants. Reservists can merge with their strongest squads of nearly any type.
	Heroes: Every six-size reinforce three boosters upgraded to a Standard Pack.
	Retreat, two buildings, and bridges can all be reached to Soldier Engineers or Pioneers.
	Preserving your units allow and maintain their veterancy by reconforcing units before they reach veterancy. Veterancy is a key to victory. Preserve your veteran units.
	Reconforcing is critical to pulling units out of danger so they can fight another day.
	Suppressed infantry can retreat to your lines by giving them a retreat order.
	Once on the Eastern Front, Grenadiers can sometimes the better part of vision. Pulling back to your base can allow you to receive reserve troops by reconforcing your squads.
	Sometimes you must reconforce a squad on almost any veterans.
	Veterans units are siphoned by stores over their territorial. Lesson: Those units perform better than their inexperienced counterparts.
	Tiny veterans units allow and maintain their veterancy by reconforcing units before they reach veterancy. Veterancy is a key to victory. Preserve your veteran units.

Retreat

See the in-game "Suppression and Retreat" tutorial.

Introduction to Company of Heroes 2

Controls

	Advancing a location (available on 'attack move' during which units will stay to fight enemies along their path instead of blindly running to their destination)
	The F1-F4 keys select your two buildings. Double tap the key to move the camera to the building's location
	Hold the `tab` to zoom to view the Hot Dispatch.
	Left-clicking on the mini-map will move the camera to that location on the map.
	Hold CTRL and press a number key to set your selection as a group.Tap a number key you've used to recall those squads. Double tap the number key to move the camera to the key position of the group.
	You can select multiple units by clicking and dragging across the screen.
	ALT-SPACEBAR to move the camera to the most recent important event on the map.
	You can hold the ALT key and press ENTER to toggle between playing in a window and fullscreen.
	Use the arrow keys to move the camera.
	To ensure you're moved using the arrow keys, by moving the mouse cursor to the edge of the screen, or by holding down the middle mouse button.
	Double tap the INTERPOSE key to reset the camera view.
	Hold down the ALT key to rotate the camera.
	Double-clicking or holding CTRL and clicking on a squad will select all squads on screen of the same type.
	Hold the SHIFT key while issuing commands to queue them up to be executed one after another.
	Hold multiple squads anywhere, tilt left to sub-select squads. Others work in this mode will only be sent to the sub-selected units.
	In Multiplayer modes, pressing the save key on the numpad will open and close the Territory Map.

Tip

Turn up your mouse sensitivity. It will feel weird at the start, but once you're accustomed to it, you can execute commands far more rapidly—it actually begins to feel more natural.

Attack Ground

When given a standard Move order, units that can fire while moving will automatically engage when they're in range of enemy units, but other units like Snipers, Mortars, AT guns, and HMGs will continue moving to their destination even if an enemy squad runs up and begins attacking. Attack Move avoids this problem by causing your squad to stop and begin firing when it comes into contact with an enemy unit. This is an especially useful hotkey to use with Snipers to ensure they don't walk straight to their deaths when you aren't paying attention.

Tip

Use Attack Ground to aim at the ice rather than at the largest vehicle—striking a unit can be a short path to victory, even against a more powerful adversary.

Attack Move

The unit's ground Move order, units that can fire while moving will automatically engage when they're in range of enemy units, but other units like Snipers, Mortars, AT guns, and HMGs will continue moving to their destination even if an enemy squad runs up and begins attacking. Attack Move avoids this problem by causing your squad to stop and begin firing when it comes into contact with an enemy unit. This is an especially useful hotkey to use with Snipers to ensure they don't walk straight to their deaths when you aren't paying attention.

Queuing Orders

You can queue orders with Shift-Click. This is especially useful when giving a unit multiple orders to capture a series of sectors or when building a series of field defenses like mines or barbed wire. You can also queue a retreat order if you want to finish capturing a sector or pick up a dropped weapon before your infantry squad runs back to the HQ.

Camera Control

The best way to move your camera to a new area is by double-clicking on a unit in the Global Unit Control, at the top right of your screen, which will center the camera on that unit. This can also be done by pressing the number of a control group hotkey, such as "5." The next best way is to click on the minimap or use the tactical map. Only scroll using your mouse when you're moving short distances and moving during a battle. You do not need to be looking at your base to build units. All of your unit construction should be done using hotkeys so that you do not have to return to your base to build a single unit.

Hotkeys

Hotkeys and Control Groups are essential to controlling your units as quickly as you would like. Use production-building hotkeys (F1 through F3) for creating units and use grid-based hotkeys for unit actions (if you want to use a unit's special ability, it's always the same key).

Interface

	The Global Unit Control can be expanded and customized, according to the small arms error to the Global Unit Control.
	Right-click arrows through your idle infantry and vehicles to make sure you don't leave valuable troops standing around doing nothing.
	Each squad has an icon that keeps track of how many of its number of veterans it has attained.
	The small attack icons on each downstairs indicates an idle squad.
	Weapon upgrades such as flamethrowers are indicated by white silhouettes beneath the squad's insignia.
	Veterancy activations can provide bonuses to market effectiveness, set skills, or even unlock new units. Some activations do not need to be activated to provide bonuses.
	A blue dot(s) indicates a squad is dressing to death. See how to a fire or into shelter quickly or it's going to be a long day.
	Many vehicles activations must wait for a short time before being used again. This 'cooldown' is represented by a timer on the vehicle's icon.
	Assume your worst enemy is standing throughout the match. When the clock appears, you have 45 seconds to prepare before the Axis or Soviet AI is launched into action.
	Engineer-held equipment icons no less show how good you are, but also how much you've invested in the battle.

Note

Popup Notifications: Pay attention to the "artillery strike" and "unit sniped" messages that pop up. If you click on the latter, your scout will be sniped to the location of the unit in question. Flashing red icons also appear on your minimap when artillery and mortars are detected.

Minimap

The minimap helps keep you aware of what is going on around the map. Information such as controlled territories, built Fuel and Munitions caches, unit locations, territories being captured by the enemy, and more can be seen on the minimap. Instead of looking at the minimap, have the camera to know where your units are or if the enemy is attacking, you can simply look at the minimap.

How to use: Selected units can be given orders on the minimap by left-clicking them to move long distances or to capture points. The minimap should be viewed as much as possible during any free time so that you can respond to any events that occur, such as the enemy capturing territory or a unit being shot at. Look at the minimap when you're building units. Look at the minimap when you don't need to be moving. Look at the minimap every few seconds even when you're micro'ing.

Tactical Map

The tactical map is an expanded version of the minimap that allows you to see the whole battlefield at once. Each unit is represented by an icon, and unlike on the minimap, you can left-click units and give them orders on the tactical map. How much you use it is a matter of player preference. Some players like to use the tactical map, while others rely on the minimap instead.

Introduction to Company of Heroes 2

Units

Unit Roles

The more you know about your options, the better your choices will be.

> **Note**
>
> Players often refer to production buildings using a “tier” number rather than by name—these have all been listed.

Unit Roles

Each unit’s role is mentioned in its description along with any upgrades or abilities that change its role or allow it to fill another role. These are all discussed in greater detail in the Multiplayer Strategy section under Units and Synergy.

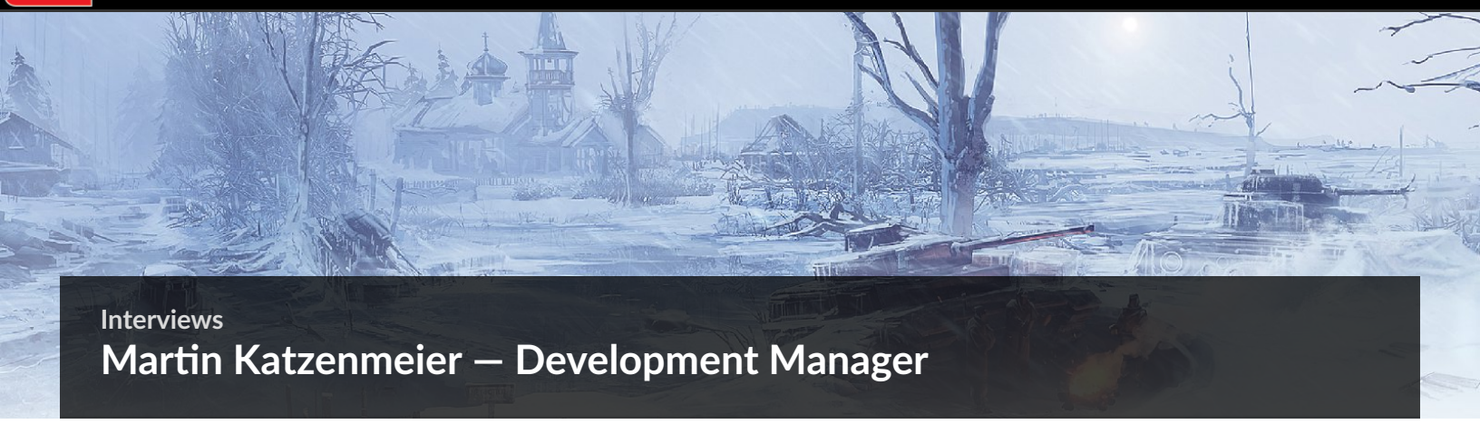

- Support: Increase the effectiveness of other units (non-upgraded Half-tracks, Engineer/Pioneer, Artillery Field Officer).
- Mainline: Versatile units that can function independently and in both offensive and defensive capacities (Grenadiers, Conscripts).
- Assault: Units with high mobility and short range (Panzergrenadiers, Shock Troops, PPSH Conscripts, Scout Cars).
- Anti-Garrison: Units that can deal high damage to targets garrisoned in buildings (Engineers/Pioneers with Flamethrower, Penal Battalion with Flamethrower, Conscripts with Molotov Cocktails, Panzergrenadiers with Bundled Grenade).
- Anti-Vehicle: Units with heavy weapons that excel against vehicles (Guards, Panzergrenadiers with Panzerschrecks, Conscripts with AT Grenades, Grenadiers with Panzerfaust).
- Fire Support: Units that have low mobility and long range (Sniper, Mortar, MG, AT Gun, Elefant).

Units

Commissar Rota 43

Commissar Rota 43

Commissar Rota 43 is a Soviet Commissar unit in Company of Heroes 2. He is a Commissar unit that can be built from the Soviet Command Post. He is a Tier 3 unit that costs 300 manpower and 100 fuel. He has 1 population and 1 squad size. He has 1 veterancy level and 1 weapon. He has 1 ability and 1 upgrade. He has 1 weapon and 1 ability. He has 1 upgrade

Interviews

Martin Katzenmeier — Development Manager

Developer Interview

Where did you start in your game industry career, what was your first title, and what do you like most about working in the game industry?

Started at Electronic Arts Canada as a QA tester working on FIFA 97 Super Nintendo. Was stoked to be getting paid to play video games!

What is the most challenging aspect of your job in general? What was most challenging in working on CoH2?

Aligning the game requirements and team together to get features done on time.

If you played the original Company of Heroes, which faction was your favorite?

Wehrmacht

Describe your style of play in CoH2: Do you build your army around certain units? How aggressive or conservative are you? What would you name your style?

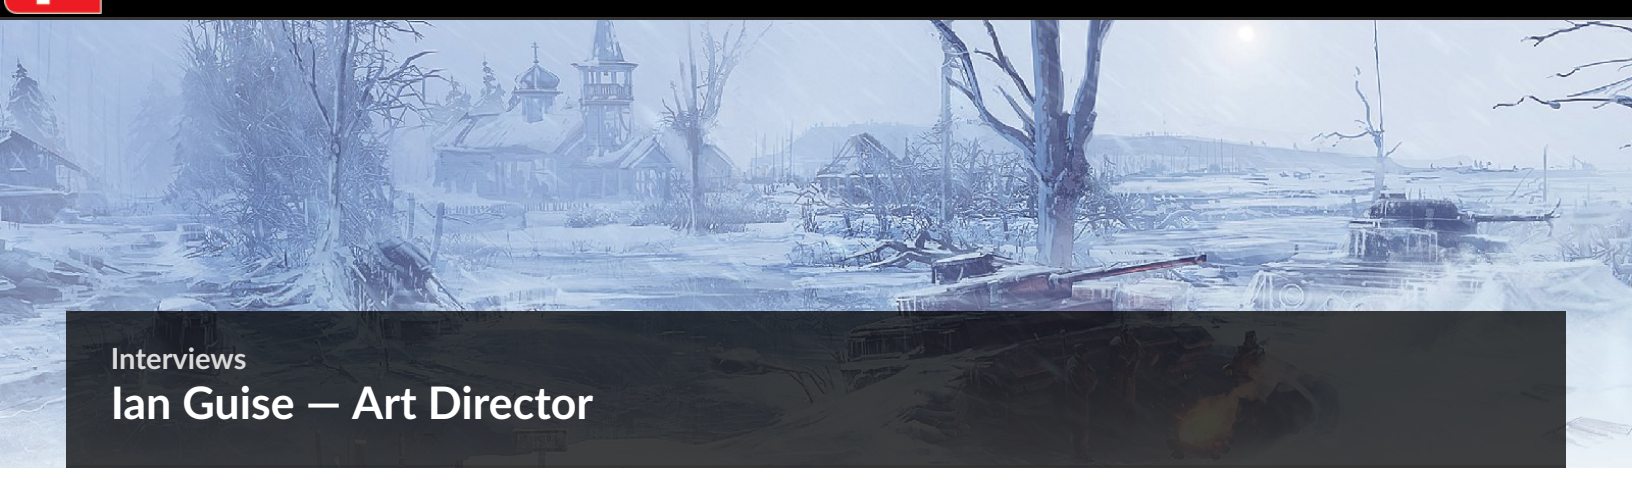

I focus on capturing territory and back capping the enemy. I will also aggressively attack the enemy base to make them think about defense and rattle them early on.

What's your favorite way to play CoH2? (e.g., 1 vs. 1 automatch, 4 vs. 4 annihilation custom matches with friends/family, 2 vs. 2 leagues in the office)?

Team Automatch with a friend 2 vs. 2, 3 vs. 3 and 4 vs. 4.

What would you tell a player who wants to know how to have the most fun with CoH2's Theater of War and multiplayer modes?

Start with completing the campaign to get the basics down, then play some Theater of War before moving onto Automatch games.

Interviews

Ian Guise — Art Director

Developer Interview

Where did you start in your game industry career, what was your first title, and what do you like most about working in the game industry?

My game career started as a modeler at Mainframe Entertainment. I transitioned into the game industry when I got hired at Relic to work on the original Company of Heroes game. The thing I like most about the game industry is getting to pursue my passions for a living.

How does an average day at Relic look as Art Director for CoH2? What are your major responsibilities and what skills do you must commonly use?

As an Art Director on CoH2 I was responsible for creating the art vision for the game. As the project progressed my focus went more towards environment art and campaign experience.

What is the most challenging aspect of your job in general? What was most challenging in working on CoH2?

The most challenging aspect of my job is in finding time to add all the features I wanted into the game. On CoH2 we were lucky enough to gain a bit of extra time on our project. We used this extra time to push the quality of our art and were able to fully realize the feature set we desired.

Who do you work with most often? Which parts of your job are more collaborative and which are more autonomous?

On an average day I worked most often with the campaign designers and the environment artists. The work we do to create maps for our game is very collaborative and extends beyond our two disciplines.

What's the process of doing research for a game like CoH2? Did you go on the trip to Russia or any other trip? What's your best and funniest Russia or travel story?

For CoH2 I was privileged with the opportunity to go on a research trip to both St. Petersburg and Berlin. Getting to visit the locations of several of the key Eastern Front battlefields was very insightful and heavily influenced the look of the environments for CoH2.

When you're telling people stories about "that time you worked on CoH2" in a few years, what experiences or events will always stick in your mind?

My fondest memories on CoH2, was when we first announced our sequel to the public. The response from our fans was overwhelmingly positive. Our team was feeling positive about the work we were doing on this sequel and the response from the public reaffirmed that we were on the right track to producing a great game.

How would you describe CoH2 to someone who is unfamiliar with it to convey how awesome it is?

Strategic tactical warfare in an interactive environment.

What about your work during CoH2's development would have most surprised you to hear when you first started on the project?

The most surprising development on CoH2 was that we are now a Sega product.

How do you manage the balance of realism and fun/accessibility/simplicity in your area of CoH2?

The art on this project is a stylized semi-realistic approach. By this I mean that the game is authentic, but not tightly constrained reality.

In your area, how much were you able to draw from the original CoH and its expansions in developing CoH2? What improvements did you specifically seek to make?

I have worked on all of the CoH products and was definitely influenced by its history. I sought to upgrade the visual quality of our game assets and to take advantage of the graphic improvement developed over the last few years. I also worked to improve the interactive quality of our environments and to make our weather an active force in our game.

What are the craziest ideas that found their way into the game?

Interactive Ice. Creating ice that has a walkable surface, is destructible, and can be re-frozen was a great technical feat.

If you played the original Company of Heroes, which faction was your favorite?

Commonwealth.

Which CoH2 faction do you prefer to play? What's your favorite commander? What's your favorite unit?

I prefer to play as the Soviets and my favorite units are the Sniper and the Katyusha Rocket Truck.

Describe your style of play in CoH2: Do you build your army around certain units? How aggressive or conservative are you? What would you name your style?

I like artillery and soldiers. I am a conservative player and my style is probably best described as turtling.

What's your favorite way to play CoH2? (e.g., 1 vs. 1 automatch, 4 vs. 4 annihilation custom matches with friends/family, 2 vs. 2 leagues in the office)?

I enjoy 4 vs. 4 games because they provide the resources and time to fully explore the army tech trees.

How difficult is it to become good at CoH2? Do you need to be good to enjoy it?

The learning curve on CoH2 can be challenging, but even with limited knowledge modes like Theater of War and campaign can be very enjoyable.

What would you tell a player who wants to know how to have the most fun with CoH2's Theater of War and multiplayer modes?

Play against the computer and just experiment with the different units. Don't focus immediately on winning, but rather on how to build your army.

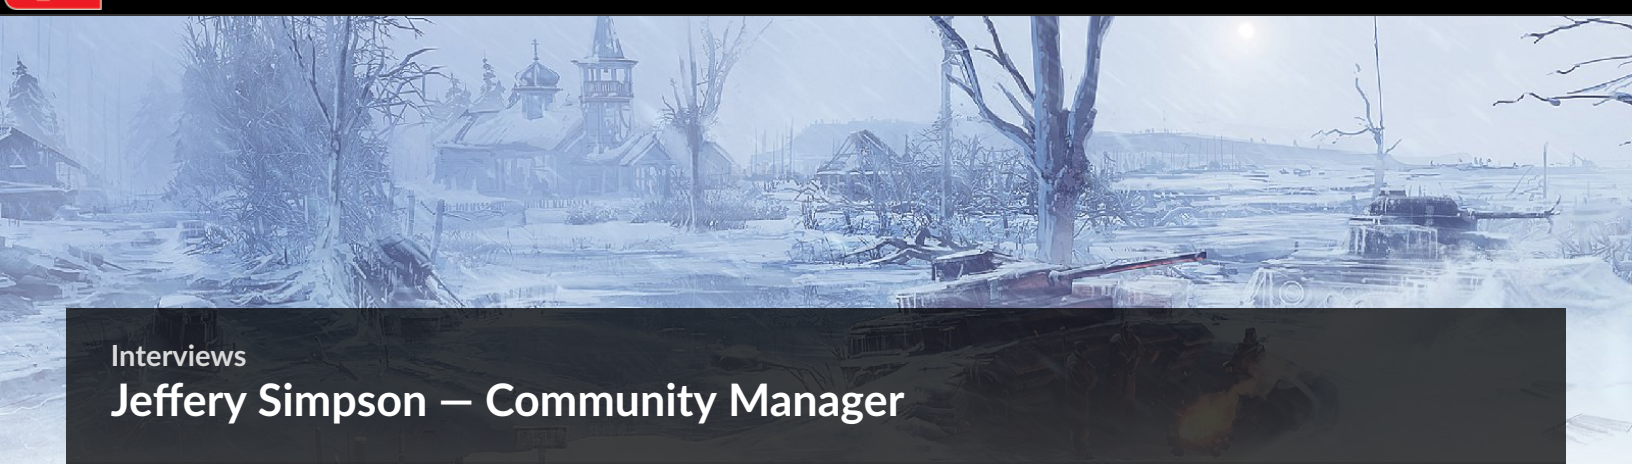

Questions about Art

How do you make the winter characterful and varied?

For our winter maps we focused first on creating appealing layouts with unique elements to their design. Once we have a good layout we layer on snow to enhance our layout and push the look of the winter visuals. Strong lighting on top of this gives our maps a strong unique quality.

Tell me an entertaining story about the development of CoH2's art.

One of first experiments with a multi-season map was on Semois from the original CoH. I had played this map hundreds of time in summer version and had developed gameplay patterns for playing this map. I was playing this map for the first time in winter and I was not doing too well. My opponent had set up a bunch of defenses near a choke point coming on a river crossing and I kept throwing away units trying to push him away from this point. I played this way for about two-thirds of the game before I remembered that the waterways were frozen and I could just go around his defensive line. I had been so use to playing this map as a choke point map, that the realization that the map was now open was rather startling. This moment solidified the idea that ice would be a game changer in our game.

Interviews

Jeffery Simpson — Community Manager

Developer Interview

Where did you start in your game industry career, what was your first title, what do you like most about working in the game industry?

I started here at Relic and I came aboard just before Company of Heroes: Online launched. I'm tempted to say that the thing that I like most about the industry is that there's no dress code, but truthfully it's all about getting to work on some of the best games in the world. That's what I love.

How does an average day at Relic look as a Community Manager for CoH2? What are your major responsibilities and what skills do you must commonly use?

I start by reading the forums and fan email. I check to see what kind of feedback we're getting on Twitter and Facebook and then get to work talking with the fans. There's a community whose members I check in with regularly, but for the most part it's just being out there talking to people. Later on in the day I take time to start planning some of the community events that we're working on holding for the fanbase.

I like to try to get at least one game of CoH 2 in just after lunch, and then it's back to work.

What is the most challenging aspect of your job in general? What was most challenging in working on CoH2?

In general I find the most challenging part of the job is taking the very technical aspects of what's going on with the development team and finding a way of explaining that to our fans, so that they know what's up with us. On CoH2 particularly the most challenging part of the job has been returning to Relic so late in the process and trying to get up-to-speed with everything.

Who do you work with most often? Which parts of your job are more collaborative and which are more autonomous?

I work with everyone on the team, so it's hard to pick one person in particular who I work with most. I think all aspects of my job are tremendously collaborative, though being the only Community Manager in the studio I do work alone a lot.

What's the process of doing research for a game like CoH2? Did you go on the trip to Russia or any other trip? What's your best and funniest Russia or travel story?

I'm not a designer, but early on in the development process, before I left Relic, we took a trip to a local military museum and I took a lot of the reference photographs that the team used. I was hoping to get a game credit for that! There was also a lot of documentary watching. For myself I have a history degree with a focus on the Twentieth Century and the Second World War was a large part of that study.

I didn't go on the Russia trip, but I lived in France as an exchange student in high school. Growing up in Canada it's hard to understand just how connected to that history that the people and the land of Europe still is. The school I went to still had bullet holes from fights between German and Allied soldiers, and had been used as a German Garrison.

When you're telling people stories about "that time you worked on CoH2" in a few years, what experiences or events will always stick in your mind?

The most exciting part for a Community Manager is after the game is launched, so I'll have to get back to you on that one!

How would you describe CoH2 to someone who is unfamiliar with it to convey how awesome it is?

CoH2 is the sequel to the highest rated real-time strategy game ever, and it's even better than the first one!

If you played the original Company of Heroes, which faction was your favorite?

I loved playing as the Germans.

Which CoH2 faction do you prefer to play? What's your favorite Commander? What's your favorite unit?

I've played mostly with the Russians since they're the new kids on the block. I wouldn't want to tell you who my favorite commander or unit are, though, that's all part of my strategy!

Describe your style of play in CoH2: Do you build your army around certain units? How aggressive or conservative are you? What would you name your style?

I suppose I'm more conservative. I guess my style would be called the Maginot Line. It's about as effective!

What's your favorite way to play CoH2? (e.g., 1 vs. 1 automatch, 4 vs. 4 annihilation custom matches with friends/family, 2 vs. 2 leagues in the office)?

I've mostly done comp stomps so far.

Do you have any weird CoH2 habits or beliefs about things that always seem to happen to you in games?

Well I don't know if I can tell you about the Relic Leprechaun that's programed into all of our games. If you catch him in the game you get a pot of gold!

How difficult is it to become good at CoH2? Do you need to be good to enjoy it?

It's not hard to pick up CoH2, but it's one of those games that you can always be learning, especially when you play against other people.

What would you tell a player who wants to know how to have the most fun with CoH2's Theater of War and multiplayer modes?

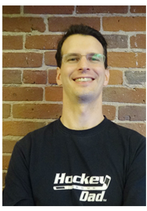

Play with friends. There's nothing better than having your friends playing with you when you pull off that masterful strategy and last-minute victory!

Interviews

Remy Saville — Lead Engineer

Developer Interview

General Questions

Where did you start in your game industry career, what was your first title, what do you like most about working in the game industry?

My first game was a shareware game called Game Derby, it was a video game about video games. It sold poorly so I had to get a real job and shipped Sega Soccer Slam. If you want to see what I looked like back then there is a secret code to replace the ball with my head. I never really had any career choice. My parents didn't buy me a game console; they bought me a Commodore 64 and not a lot of games and told me if I wanted more games I had to make them myself. Unlike today where kids can make some amazing games with Unity mine were quite a lot worse than the commercial games of the day. Watching the industry change so much from then is what keeps me here; it is very difficult and constantly changing. There are always new enthusiastic people ready to make something great. You just don't get that excitement in many other jobs, programming or otherwise.

How does an average day at Relic look as a Lead Programmer for CoH2? What are your major responsibilities and what skills do you must commonly use?

As Lead Programmer I spent more time at a making sure things were going in the right direction with the other discipline leads than contributing specific features. Although I did get to contribute a couple cool things, the credit really goes to the great team for this game. The quality of the group that built CoH2 is top-notch.

What was most challenging in working on CoH2?

The biggest challenge for CoH2 was to limit scope. When we started, everybody had grandiose dreams of all the things we could refactor and change. They ranged from technical implementations where the source code had accumulated cruft from all the different people touching it under deadline pressure to fundamental game mechanics. We had to keep in mind we're making a sequel that needs to feel like Company of Heroes, not build a cool new unrelated game that happens to be called Company of Heroes 2.

What's the process of doing research for a game like CoH2? Did you go on the trip to Russia or any other trip? What's your best and funniest Russia or travel story?

I was fortunate enough to be part of the trip to Russia and Germany. Being on the Company of Heroes franchise for almost a decade I picked up a lot of respect and even a little interest in World War II, even though I started with none. I now record the WW2 shows around Remembrance Day, and when visiting France I was sure to check out Juno beach to witness the D-day sites and pay my respect.

For the eastern front, I knew nothing of how it differed. I had read A Writer at War by Vasily Grossman before going on the trip. This book was illuminating and a great start. But only a start.

In the first museum I went to in St. Petersburg they had a series of absolutely haunting photographs which start with a beautiful young woman at the start of the Siege of Leningrad. When blockade ended just a couple of years later she had aged decades and was unrecognizable. When people see movies or entertainment about the heroism of WW2, people lose sight of the human cost and impact on the civilians.

War is horrible. How do you make something people will choose to play for fun when it is about something horrible? The tragedy that WW2 was is the lowest point of mankind's history anybody alive can remember. How [do you] do your duty of being respectful and not trivialize the atrocities and suffering, yet still make a game of it?

While in a German museum I realized what had to be done when we had hired an old Veteran as a guide. It was obvious he was not happy with us turning WW2 into a game, into entertainment. However by the end, once he found out how much our Lead Designer knew and understood, he really warmed up to what we were doing.

I realized we can't fit all the stories of WW2 into a single video game. And it isn't our job as a video game to teach people about the Holocaust or history. It is simply our job to be accurate and honest, and provide the best entertainment possible so people become interested in history. When somebody has a great time playing CoH2 and experiencing the taste of history we can show in a game they are more likely to pick up a book and learn more in a medium that can do a proper job of teaching. We succeed by making a great game that earns awards and fans because that keeps people aware and increases the odds they'll choose to learn more on their own.

When you're telling people stories about "that time you worked on CoH2" in a few years, what experiences or events will always stick in your mind?

A lot of my favourite stories involve the AI. In a 2 vs. 2 match on high difficulty it had managed to box in one of the AI programmers bad enough he had to rage quit.

Other times it was finding problems before the top players. One day a balance bug was introduced that basically had a mortar fire two shells instead of one. Then an AI bug was logged that the AI built too many mortars. It turns out there was no AI bug, our game was temporarily imbalanced such that mortars were extremely overpowered and the AI was just exploiting this before any human players on the team realized it.

How would you describe CoH2 to someone who is unfamiliar with it to convey how awesome it is?

I feel CoH2 is a must play game for 2013. No other game lets you control an army like this with the same detail. It has a fantastic depth, beyond a great single-player campaign it is has hours of entertainment playing with or against the AI or other players. This is where I find its real charm lives.

In your area, how much were you able to draw from the original CoH and its expansions in developing CoH2? What improvements did you specifically seek to make?

Being on the project for a long time let me see many people come and go and come again. I was able to see what some common pain points were for developers to target our improvements at them. Also as an active CoH1 player throughout development I was able to see places where our old technology wasn't able to address the concerns moving forward and made sure we allocated appropriate resources to improving these systems.

I'm happy that I was able to fight for enough time for top guys to build the improvements we did for the AI and UI.

If you played the original Company of Heroes, which faction was your favorite

I love the way Wehrmacht veterancy worked. Even though I like victory point more than annihilate matches, their late game armour and veterancy combo was hard to compete against.

Which CoH2 faction do you prefer to play? What's your favorite commander? What's your favorite unit?

Definitely German. The German army lets me save up my munitions for a few passive upgrades to make them stronger. The Soviet army requires much more brain power to constantly spend the munitions on temporary abilities for a larger army. While in the hands of an expert player this is devastating, I am usually able to hold my opponent at bay until I can roll out the wicked German armour, my favourite of which is the medium Panzer IV.

Describe your style of play in CoH2: Do you build your army around certain units? How aggressive or conservative are you? What would you name your style?

I like to play larger battles and play the role of forcing the battle from mid to late game. I usually build three to five Tier 1 units to stalemate around the centre of the map and then build some fuel depots to go straight for Tier 3 tanks. Often opponents will enter mid game only to find I've basically skipped it. I can usually claim enough of the map with my early tanks that my allies can roll out Tier 4 units and we'll clean the map. It's a very different strategy than you'd use in a 1 vs. 1!

What's your favorite way to play CoH2? (e.g., 1 vs. 1 automatch, 4 vs. 4 annihilation custom matches with friends/family, 2 vs. 2 leagues in the office)?

I'm a traditional comp stomper. When I started playing CoH1 online right after it shipped I got discouraged that I, as a developer, wasn't competitive online in PvP. I found I knew enough to be a very useful teammate when fighting against the AI. I had a great time getting started doing 4 vs. 4 matches against the AI and will always have a soft spot in my heart for 4 vs. 4 AI battles. It's a great way to close out a night of intense PvP battles.

These days I like playing 4 vs. 4 with friends on Ventrilo against real players. Having that out of band communication really helps. I like 4 vs. 4 much more than 1 vs. 1 because you've got support if you make a mistake or get an unlucky hit that would be a game ender in a 1 vs. 1.

Do you have any weird CoH2 habits or beliefs about things that always seem to happen to you in games?

In CoH2 you get an alert when a squad is under attack. You're supposed to hit the space bar to go to that event as soon as it happens so you can make sure your unit is in cover or retreat. I swear I sometimes don't get those audio alerts and end up losing a squad. As much as I swear it isn't my lack of skill for losing a squad nobody can reproduce this "bug"!

How difficult is it to become good at CoH2? Do you need to be good to enjoy it?

CoH2 is a game for gamers. We assume our players have a certain minimum amount of skill. This is a good thing; we're not targeting the same audience as Bejeweled.

To become a good player doesn't take that much effort, but it definitely takes a few matches. The Soviet and German armies had a lot of specialized units, it will take a few matches to become familiar with the them, even if you played CoH1. Obviously even if you've played through the single-player campaign and know what the units do you can't expect to go online and win your first game against people that have done the same, but already played 10 matches online. However you've got a good chance to beat the easy AI and become a good online player.

It doesn't take that many matches to be able to go from beating easy AI to beating hard AI. If you can beat just normal or hard AI you're already a very good player. If you can beat Expert you're definitely in the top few percent overall.

The journey from being a completely new player who has never played anything like this through the campaign, Theatre of War, easy, normal, hard AI, and into multiplayer is the experience that is Company of Heroes. You don't have to be good to enjoy it because as you enjoy it you will become good.

What would you tell a player who wants to know how to have the most fun with CoH2's Theater of War and multiplayer modes?

Get friends. If you have a match either with or against a skilled player, invite them to be a Steam friend. Get a headset with a microphone and chat with them. Don't play in isolation, you're missing out on too much.

Questions about Programming/AI

What have you done differently for Company of Heroes 2 to improve it from the first Company of Heroes? How different is the engine? Etc.

The work was in doing more on a big scale. CoH1 ran great for 1 vs. 1 matches, but for large 4 vs. 4 matches with all the weather effects active your needed a hefty CPU. The Soviet army won due to sheer numbers and the coldest winter on record. We needed to be able to run well in these settings. CoH2, with all the fancy new features, out performs CoH1 when both are running similarly heavy settings!

On top of that you've got new Fog of War that opens up all kinds of new gameplay. In old games the main character would have footprints stick around for a few seconds, but now we've got the memory to have hundreds of soldiers and vehicles moving around, leaving 3-D footprints in the snow for the entire duration of the match, which are properly occluded by the FoW.

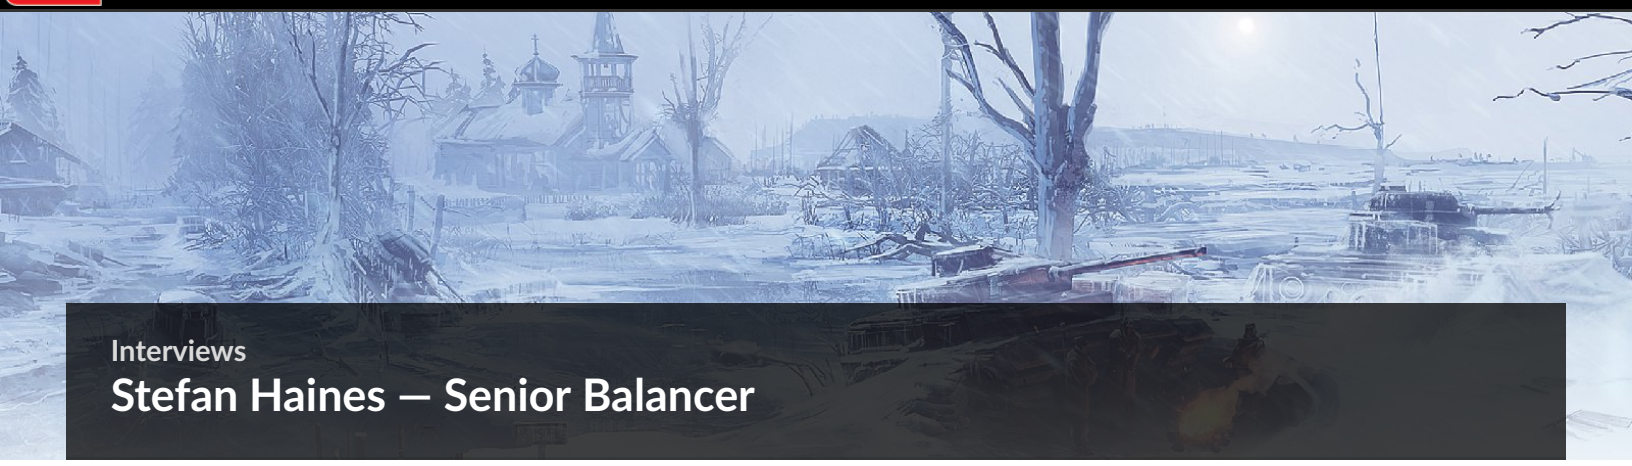

How did you go about deciding what game engine to use for CoH2? What were your goals with the Essence 3 engine?

The aim was to make a great game like Company of Heroes. To have the scale we needed and be able to have new features like ice that would crack and weaken as you drive tanks over it there was nothing we could buy to do this. We had to build it in house.

What about the technology powering CoH2 would surprise a player the most?

I think the audio. Right off the bat when you listen to the orchestral music in the front end everybody can recognize you need to turn up the volume when you play this game. When you get into a match you'll agree we've taken a step forward with audio.

Gamers won't ever experience the big changes moving from Doom in the early 90s to a 3-D polygon game like Quake. When you upgrade from older games and watch a tank leave depressions in the snow and then hold alt to tilt the camera as you watch the tank slide on the ice you may or may not notice the way the sunlight correctly reflects differently on the ice that was just cracked by the tank. It just feels like this is the way it should be. Unless you're a connoisseur of this kind of thing you probably won't appreciate you're playing with the #1 technology in these areas.

Interviews

Stefan Haines — Senior Balancer

Developer Interview

You've likely played CoH2 more than anyone. What is your favorite unit? Favorite ability? Favorite campaign mission? Favorite Theater of War mission? How did this change from when you first started playing the game to now?

Favorite unit: ISU-152; favorite ability: Sector Artillery; favorite campaign: Mission 7; favorite Theatre of War mission: Blitzkrieg challenge. Unit balance changed a lot over time and some unit roles also were adjusted. Early on, normal infantry were more preferred; balance eventually lead to more late-game units being employed. Campaign missions didn't exist in a reformed state for a period of time and Theatre of War as a feature came later. My preference for Theatre of War was established early and stayed.

In multiplayer, what is your favorite early build order to use with each faction? Favorite strategy? Favorite commander? Favorite map?

I prefer to make large numbers of basic infantry units and win early on; this strategy is also the most entertaining against weaker opponents who may feel cheated when their more varied approaches are beaten by brute force. To go along with this, I like to bring commanders with the "Hit the Dirt" ability or the Light Infantry Package upgrade. My favorite map is Kholodny because it's small.

Were any units comically overpowered or underpowered at some point during development?

There has been a lot of variance in what was considered strong during development. There was a period of time where the Soviets could dispatch Conscript squads without a resource cost that was generally considered grossly unbalanced.

Are there any bugs that were eventually turned into features?

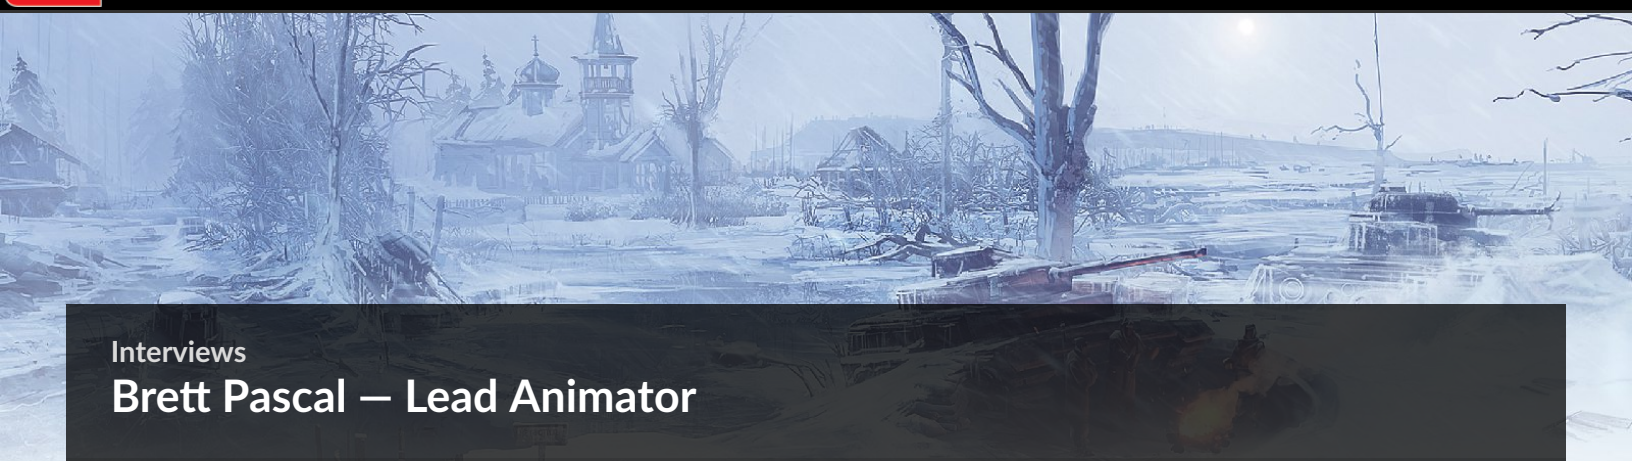

Not sure if anything started as a bug and became a feature, but many design features are often logged as bugs.

What has been the most difficult thing to balance?

Subjective features on units such as movement speed or range have always been difficult to value in the game, as a lot of our balancing is based around statistics.

What's the silliest bug that you saw?

The Pak 43 used to be a mobile unit and for a period of time it could garrison inside buildings. It looked quite funny when garrisoned inside a building that it was larger than.

Interviews

Brett Pascal — Lead Animator

Developer Interview

Tell me about the process involved in animating infantry and vehicles: How did you make the vehicle animations so immersive when paired with different vehicle states and atmospheric effects?

We gathered a ton of reference. We video capture ourselves running with our weapon props … we rip videos down off of movie footage or YouTube clips … and anywhere we can get good realistic source material. In some cases our tech artist Alun, or our Design Director Quinn would offer input on the reference so we got it right. We also had one of our animators build a pre-visualization of how we wanted our vehicles to behave. From that we targeted weight as our key feature with the vehicles. You'll notice they lurch when they start and stop, or change gears. They have a ton of weight when firing. And it's super satisfying to blow one up with the death animations. Also, several vehicles have soldiers climbing out to save themselves when the vehicle is near death. They are immersive because of the designers setting all of the behaviors they required. We just worked with them to ensure we supported the behaviors with an animation that matched our goals for the look.

What is your favorite infantry animation? What is your favorite vehicle animation?

My favorite animation is actually the vaulting animations. I think it's so nice to see a sense of strategy in the units moving over obstacles. It was something that frustrated me in the old CoH—that if I want to shortcut, I can't. Having the option to direct squads over low walls and fences offers a ton of new strategy to employ in battle. As for vehicles, I love the abandon animations. Some of the tanks (Su-76 comes to mind) have exposed crews, and those animations are great as well, but when the tank is on fire and near death, watching the soldiers attempt to flee is incredible. It's equally interesting and horrifying at the same time.

Describe the most impressive visual effects in CoH2 from your perspective – how long did they take to create and what's special about them?

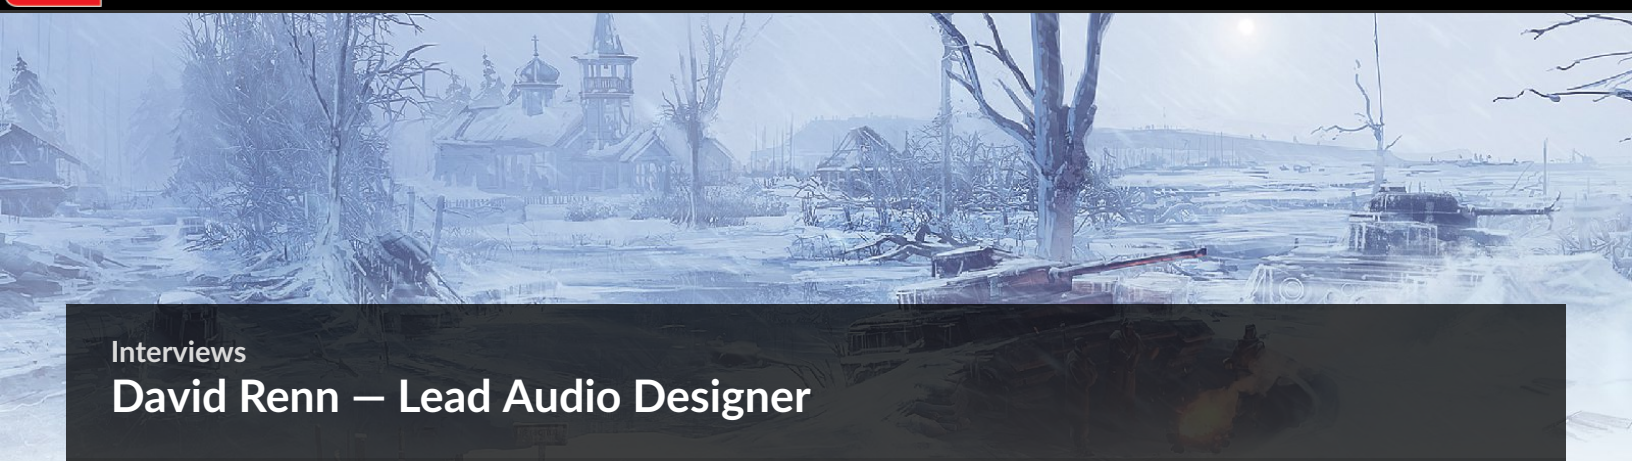

I don't know how long each effect took to create, but I love the burning buildings. Watching the Flamethrower paint fire on a building until you see it catch and start to burn—it's horribly beautiful. Fire is hard to make look good, but our FX team knocked it down.

What's the most challenging aspect of making units and abilities feel real?

It's the same challenge with all game animation—making the weight and movements seem realistic actually means you have to push it PAST realistic. Looking at an animation in the art package (3ds Max) and in the game with everything together is two completely different things. So animators actually need to make it look more surreal than you think in order to get a realistic perception from a player.

Tell me an entertaining story about the development of CoH2's graphics.

Our cinematics pipeline was incredible. We had a great compositor/lighter/artist called Bartek on the cinematics team, and we started trying to hit a high visual target, but resources and schedule had us reining it in to look almost exactly like what you would see real-time in game, but with a little depth of field, and maybe some basic color correction. Still a great look, but we ultimately wanted more. At about mid-project we got a headcount for an intern compositor/artist. He ended up being an artist called Ben, and originally we though he would come in and just help us keep the schedule on track. Little did we know what would happen when you mixed Ben with Bartek. These guys brought so much to the table. Of course, it was always our goal to create great cinematics, but now with these two guys pouring their passion in, suddenly we're looking at masks, 2-D and 3-D FX, better lighting, better models, better atmosphere. Of course we raised the eyebrows of our Production department, but we kept them in the loop and in turn they supported us immeasurably. Luckily we moved Ben into a full-time position (well earned I might add). It was just one of those lightning in a bottle type of things: You have x time and x money, but suddenly you find an extra value somewhere. And everyone is so passionate about doing great work at Relic, even though on paper it doesn't look possible. Somehow you pull it off.

Interviews

David Renn — Lead Audio Designer

Developer Interview

What are your thoughts on unit speech?

Speech in the Company of Heroes franchise has always had a unique identity, and an intense complexity—players were hearing new lines of speech even after years of play. Building on the same system that drove the original, and with nearly 17,000 lines of dialogue, we've added and refined the CoH2 speech design to again deliver a rich and contextually accurate experience. Squads are aware of their surroundings, and listening to what they have to say can alert you to both dangers and opportunities—that and what they might have had for dinner last night.

What unit/ability are you most proud of in terms of sound?

There isn't one specific unit or ability, but rather three categories of sound that I am especially proud of.

Vehicles like tanks and armored transports need to convey the power and size of their real-life counterparts, and to that end we've added many behaviors to give them as much dynamic life as possible. In addition to the engines, there is a host of contextual sounds such as gear shifts, braking, and suspension movement. These all give the vehicles a lot of character, and their sound signatures can be useful if you listen for them. One of my favorite moments in the game is hearing the approach of enemy armor before I can see them, their echoing rumble floating out of the fog of war.

Weapon fire sound effects in the Company of Heroes franchise have always been very strong, but we felt that they could still improve. For CoH2, we recorded nearly all of the guns in the game using authentic weaponry. The results are great—all of the weapons sound as they should, and sound great. Some of my favorites are the chug of the DP-28, the crack of the Kar98, and of course the terrifying MG42.

The score for Company of Heroes 2 surpassed my expectations tenfold. Working with composer Cris Velasco, the score evolved to become something great. It perfectly captures the central themes of CoH2, and provides an emotional backstory to the action.

What was the most challenging part of the game's audio?

Because they have so many components that all must work in harmony, the vehicles were a big challenge in terms of sound design and tuning. It was a long process to give each army and each vehicle a unique character while keeping them all cohesive.

The audio mix itself was a challenge as there is so much going on at any given time. We've added a lot of detail in the world—from material-specific debris on explosions and impacts, to the jangle of an MG42 being carried cross-country. The challenge was to create a dynamic mix that would react to the state of the game and be well balanced in the quiet moments as well as the loud.

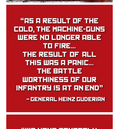

"AS A RESULT OF THE COLD, THE MACHINE-GUNS WERE NO LONGER ABLE TO FIRE. THE RESULT OF ALL THIS WAS A PANIC... THE BATTLE WORTHINESS OF OUR INFANTRY IS AT AN END"
- GENERAL HEINZ GUDERIAN

"WE HAVE SEVERELY UNDERESTIMATED THE RUSSIANS, THE EXTENT OF THE COUNTRY AND THE TREACHERY OF THE CLIMATE. THIS IS THE REVENGE OF REALITY!"
- GENERAL HEINZ GUDERIAN

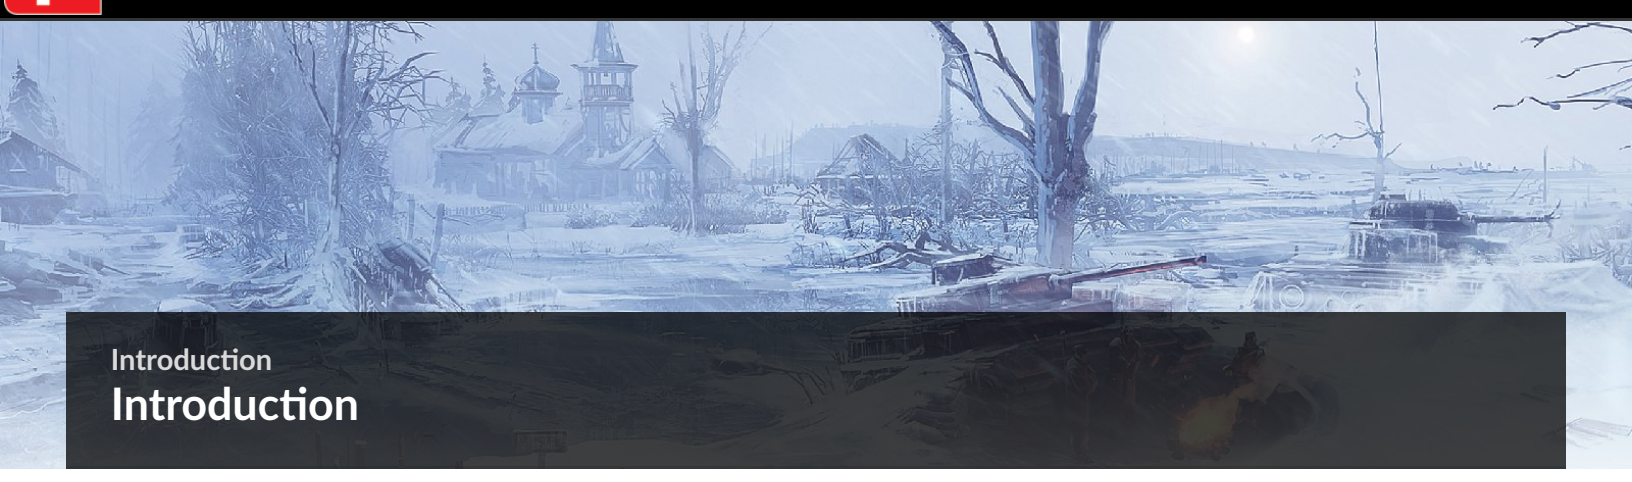

"THE FRIENDSHIP OF THE PEOPLES OF GERMANY AND THE SOVIET UNION, CEMENTED BY BLOOD, HAS EVERY REASON TO BE LASTING AND FIRM."
- JOSEF STALIN
(TELEGRAM TO THE GREETING TO HITLER, 1939)

Introduction

Introduction

The Company of Heroes 2 campaign follows the story of Lev Abramovich Isakovich, a Soviet Lieutenant who fights against the Germans in World War II. He recounts what he remembers of the war years from a Siberian prison camp in 1952. The German forces began to invade the Soviet homeland at Hitler's command, forcing the Russians to defend the Motherland with every last man. You will battle through the Russian countryside and towns to the German stronghold of Berlin, during both the warm summers and harsh winters. You will command the Soviet soldiers as they fight and die, not for glory but out of necessity. Experience war on the Eastern Front from the perspective of a Soviet commander and defeat the German menace.

Use the Mobilize ability. Conscripts are readily available to capture territory and abandoned weapons/vehicles.

Use grenades to damage enemies behind cover or in structures.

Look for dropped weapons on the battlefield. These can be picked up and used by squads.

Don't be afraid to sacrifice Conscripts. Soviet doctrine considers troops expendable in furtherance of the tactical or strategic objectives.

Engineers can plant demolitions charges, effective against all targets, and detonate them when enemies approach.

Combat Engineers are extremely useful. They can plant mines and demolitions, build structures, repair vehicles and equip flamethrowers.

Flamethrowers are area weapons that ignore cover, ignite structures, and strike fear in the hearts of your enemies.

Combat Engineers are extremely useful. They can plant mines and demolitions, build structures, repair vehicles and equip flamethrowers.

Flamethrowers are area weapons that ignore cover, ignite structures, and strike fear in the hearts of your enemies.

Engineers can plant lethal anti-tank and anti-personnel mines. Try placing these on expected enemy routes.

Ice can be destroyed by explosive, ballistic, and flame weapons. If ice breaks beneath a squad, the squad will submerge and die.

German Panzergrenadiers are elite troops with powerful submachine guns and bundled grenades.

Basic infantry weapons such as rifles and submachine guns are nearly useless against tanks and other armored vehicles.

Use your Maxim squads (or captured MG42s) to suppress enemy squads. Once pinned, enemy squads can't move or attack.

Face your heavy machine guns and anti-tank guns. They do you no good if they're pointing the wrong way.

Deep snow greatly reduces infantry movement speed.

Units exposed to extreme cold will eventually die. Watch the thermometer gauge and seek warmth or shelter before the gauge empties.

Infantry squads and weapon teams can be reinforced when near a friendly half-track.

Due to training and equipment, Soviet Snipers are immune to extreme weather, but they are still slowed by deep snow.

Freezing troops can warm themselves by fires or inside structures.

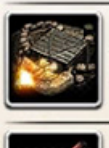

Getting into cover stops (but does not remove) the cumulative effects of extreme cold.

The Katyusha Rocket Truck excels at producing massive, rapid swaths of destruction, but its accuracy is poor.

Armored vehicles are always more vulnerable from the rear.

Tanks are one of your best tools to deal with enemy emplacements such as bunkers and machinegun nests.

Engineers with the Hazard Removal Package upgrade can safely detect and defuse enemy mines.

Scout cars, trucks and half-tracks are especially vulnerable to anti-vehicle weapons.

Scout cars are effective counters to enemy snipers.

The HM-38 120mm heavy mortar has a large, devastating area of effect, but be sure to keep friendly troops out of the impact zone.

The German 88mm PaK43 is capable of defeating any tank on the battlefield, at very long range. Use mortars, airstrikes, artillery, or infantry assault to take these out before sending your armor in.

The SU-76 is effective against light or medium tanks and can barrage an area with indirect fire, but it is vulnerable from the rear.

Infantry units can be equipped with a variety of anti-vehicle weapons, from anti-tank grenades to anti-tank rifles.

Enemy vehicles can easily be tracked in the snow.

Long-range artillery strikes are useful for weakening enemy defenses before attacking.

Smoke grenades or barrages can be used to block line of sight, covering your approach to enemy defenses.

In 1944 the Red Army began producing T-34 tanks with 85mm main guns, vastly improving the tank's armor penetration against late-war Panzers.

The Panzerwerfer 42 mounts a ten-tube 15cm Nebelwerfer launcher on an armored half-track chassis. The saturation barrage is deadly against infantry and other light targets.

Ania and her snipers can build a cover object that provides camouflage.

Ania can light a campfire to attract enemies and ambush them.

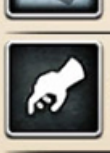

Polish snipers will hold fire until given an attack command. Try to attack from maximum weapon range, and prioritize dangerous enemies.

The Soviet ISU-152 is a heavy tank and can crush things that medium tanks cannot.

Ice can support the weight of heavy tanks, but it is considerably weakened and more vulnerable to breaking under artillery fire.

Berlin's streets were a maze of rubble and discarded items during the final days. Check every corner and alleyway for salvageable equipment.

When you mobilize Conscripts or Penal Battalions, Order 227 will be enacted for a short time. While active, retreating soldiers may be shot by the Soviet Commissar near your HQ.

Mission 1
Mode 1

Achievements

Compassion in War: Rescue the trapped civilians.

- Described within the mission walkthrough.

Combat Engineering Kit a German tank with a German AT Gun.

- Received through normal completion of the mission.

Soviet Zeal: Complete Mission 01 without calling in additional Shock Troops.

- Requires continuing all of the Shock Troops, keeping them in cover and allowing your Soviet allies to take as much fire as possible. Use grenades to take out enemies. Free-run away instead of sitting in cover close to them.

Walkthrough

Greetings, comrade. Your first mission as a commander sets you in Stalingrad, where your forces have just exited a ship and are ready to fight the Germans. Under your command are two squads of Shock Troops, elite infantry with body armor and submachine guns. Move your Shock Troops off the docks before they are blown up by German air support. Follow the T-34 as it moves forward. Your Shock Troops will follow it. Use the tank's armor to protect your troops from enemy fire. Advance behind the tank. Follow tanks cover, try to take cover behind burnt-out objects and vehicles that provide Green cover, which is designated by the green circles when you click on a unit and receive behind objects. Order the units to take cover by right clicking near cover. Destroy the enemy tanks and infantry that are attacking your forces. Once the tank reaches the end of the road, it will destroy a wall to let you through. Be careful, as the tank's armor can be used as Green cover for your forces. Once the enemy units are forced to retreat, your commanding officer will tell you of the current battlefield situation.

Tip

If you lose your first couple Shock Troops squads at the beginning of the mission, you will be given new squads at no cost. After you receive the Mobilize Shock Troops commander ability, you won't be granted additional squads except by the use of that commander ability.

Caution

When you start hearing the dive bomb while looking at the T-34, you know that trouble is coming. Any unit near it will be killed, get your units away from the T-34 to keep them alive.

After the short cutscene, you are granted the commander ability Mobilize Shock Troops, which allows you to call in additional squads. Use this ability to call in two more squads of Shock Troops for the fight, as shown on the resource bar. These are free and unlimited as long as you meet the population requirement.

To eliminate the German Heavy Machine Gun causing trouble for the Soviet forces, you must take one of two paths to flank it, which means coming from a side angle where it cannot shoot your forces. If you click on the Heavy Machine Gun (HMG), it displays the range it can shoot at you. Stay out of this range. Your first path to the HMG is to the left of the HMG's position. This path has a flanking path two enemy squad clustered for defense. Take care of the squads with your Shock Troops, using cover to your advantage. Move further up the path and around the side of the HMG, then throw a grenade to kill the crew member. This will destroy the HMG and eliminate the threat to your forces. Your second path is to the right of the HMG's position. The more crew members a weapon team has, the longer they can last and the more likely they will survive a grenade.

Once the HMG has been taken care of, continue to move your squads through the city. Make use of cover, especially when near lots of German infantry. Grenades are powerful against clumps of enemy infantry and can be used for the rest of the mission.

Further up, to the west of the left-Hoetzner is an additional objective. Rescue trapped civilians within a building by defeating all of the German soldiers nearby. Move your squads together to kill off the German soldiers. As you are coming up from behind them, they do not have cover and are extremely vulnerable. Feel free to use grenades as much as you like to eliminate the German infantry. Once the area is clear, the civilians will run out of the building. Move your Shock Troops to the area. If any German infantry are taken out, move toward the nearby Hoetzner to receive of a small path east of the building with civilians. It leads directly to the Hoetzner. Move your Shock Troops nearby so they can shoot down the Hoetzner crew, or throw a grenade to eliminate it quickly. Move on to the next Hoetzner for the crew of your position. Keep in mind that you kill a Hoetzner, all nearby German troops will retreat. Tossing grenades at the Hoetzner and then running away saves you from having to deal with the enemy infantry.

German armor has come to stop your advance! Shock Troops are not capable of dealing with tanks, as they are outfitted for taking out infantry. Move your squads to one of the designated areas where the Panzer IV cannot shoot them. After the Panzer IV has pulled back, your commanding officer lets you know that an Anti-tank Gun (AT gun) is nearby and you can take it for yourself. Move your Shock Troops to the AT gun and capture it. Once it is yours, move your squads to the nearby area to open a German HMG on a small path. Follow the onscreen tip to throw a smoke grenade in front of the HMG, blocking its line of sight and allowing you to move your Shock Troops through the area and around to flank the HMG. Toss a couple of grenades to take out the HMG, then continue on to the AT gun.

Another German Panzer IV tank enters the field once the HMG have been destroyed. Move your AT gun forward and set it up to shoot at the Panzer IV. Your AT gun will destroy the Panzer IV in a few shots. Move your Shock Troops to the area to clear out the enemy unit up and to the east. There is a second abandoned AT gun just to the north of where the AT HMG was positioned. Send a squad of Shock Troops to crew the gun and aim it at the Panzer IV. Destroy the tank to acquire your first victory as a Soviet commander.

Volume 2
Mission 2

Achievements

Invaluable Resource Keep the Shock Troops alive throughout Mission 2.

- Keep watch of your Shock Troops throughout the mission and use Commander to merge into their squads as needed.
- Use Commander's Repair Drone to heal your Shock Troops and keep them alive until the end of the mission.

Walkthrough

CLICK HERE FOR THE INTERACTIVE MAP

The first mission is back-to-basics, starting off with a tutorial on the Command Screen. Now, any level without a Sentinel tower with its evacuation is complete and all of its resources have been removed or destroyed. You are granted two Command squads to control, Commander and Shock Troops. Commander is the squad you've been using throughout the campaign, and Shock Troops is another. You are given control of the Shock Troops to start and Commander near their position. To complete the objective of using Merge on the Shock Troops, select your Commander, click on the Merge ability, then left click on one of the squads of Shock Troops. Commander will merge into the Shock Troops squad and become a part of it. Commander will be part of the strength, health and speed of Shock Troops but the movement list will simply and exactly follow Shock Troops. Once the unit is merged, the additional enemy Shock Troops provide you in this area, but they have a cost to their maintenance.

Tip

Collectable canine bones are scattered around the map. They provide extra Resolutions that can be used for promotion and other purposes. To collect one, click on a squad with the canine bone in the same area, then you control the AI unit on it's the previous mission.

The Darkness and some of Infected, to take your position. Keep your Shock Troops in cover and place your Commander nearby to heal them. Use Merge to keep your Shock Troops alive and Commander's Repair Drone to heal them. Commander is also grenades if you find that you are being overrun, although be sure to save Resolution, you will need the entire Armoire later for the mission. Your new Wildfire Flock Command Squad commander ability can be used to call in a new squad of Corvacks—see how to deploy your Command squads that are new to you. Note that sometimes with your objective is complete.

Tip

Throw grenades at enemy Grenadier squads, they're much more dangerous than Zelmagian.

The supply trucks have several run out there are important supplies that could not be moved in time. Once you are given these objectives, you will be tasked with defending the supply trucks from Infected and Darkness. Use Merge to keep your Shock Troops and Commander in their defensive position until your Engineers are done placing the demolition charges. When both Engineers have placed their charges, they will automatically run to the nearest supply truck and begin to repair it. Keep your Shock Troops and Commander in their defensive position until your Engineers and anything nearby.

Tip

Commander with Corvacks often drop their weapon upon Rose up, they're powerful!

Most squadies must be received behind the Darkness over time for more, then the Headquarters, now NOVEL's Powerthrowers are placed on the ground, leaving your Engineers with these are grants that is now ability. Powerthrower Attack, which can be used to destroy the Darkness and Infected. Use Merge to keep your Shock Troops and Commander in their defensive position and cover. Order your Shock Troops to take cover near the buildings to defend the Engineers that comes Infected. Then, when the Engineers have placed their charges and their new ability to open the buildings. Be careful not to get too close as Powerthrowers will cause open cover.

Tip

Powerthrowers are armed for special squads and loosed within buildings. If you Control-select Infected side cover Infected, they'll throw their weapons at the nearest enemy. Powerthrowers are also armed with Infected, which can be used to Powerthrower Attack Infected. Infected Attack is not necessary for the squad's attack, but rather an additional ability that can open up within area.

The final part is to defend the base until until the train departs. You are granted a short time to make sure your defenses are in place. Use Merge to keep your Shock Troops and Commander in their defensive position. Order your Shock Troops to take cover around the Pod Defense building's platform as the Pod Driver, which activates when an enemy comes within your area. Place

Mission 3
Mission 3

Achievements

Achieve Honor: Resist the urge without losing a shield on Grunt difficulty.

- As the final part of the mission is set timed, it is possible to activate any of the [Generators](#) to take out the Hilltop without losing a unit. If this, you'll get to a ride on both sides from the [Tank](#) and weapons teams. Keep your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.

Weapons Rest: Field Pieces at least 10 tiles before the village defense.

- As well as you have control of the three Combat Engineer squads, you'll also be units patrolling areas as well as the Hilltop. Keep your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.

Something Borrowed: Capture at least 3 enemy weapons on the map.

- There are two teams that the end part of the mission which you are definitely going for the Sentinel Arrow using [Engineers](#) and [Snipers](#) units. Keep your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.
- Alternatively, as the final part of the mission is set timed, secure the first two territory points until Alpha and Delmore arrive. Keep your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.

Walkthrough

Walking out to the east of Whitecrest, you are tasked with defending it with some help. The [Sentinel](#) arrives that is [Engineer](#) and [Sniper](#) units. Keep your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.

The target with Grenadier at each of three territories, each under attack by Sentinel and [Grenadier](#). You will arrive in a wounded from the west, the middle territory is wounded from the northwest, and the right territory is wounded from the north. Your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.

The middle territory is the most open and exposed to attack of the three. Sentinel, and as well back and straight into the [Sentinel](#) units. Keep your [Engineer](#) and [Sniper](#) units alive and you'll get the achievement. Be sure to not accidentally kill any of the Jackal or [Grenadier](#) units.

Achievements

Void Marcus: Get all Void Marcus voiceovers in Mission 4 using the Visions.

- This requires you to capture all of the Vanitas quests with the Visions. Eliminate the Darkness cells on sight normally (stealth, but with your Visions) to capture the Vanitas quests.

Revenge: Destroy all 10 Vanitas in Mission 4.

- All Vanitas will be marked on the mission map. Use Demolition Charges to blow up as many cars first. Enemies all in the same radius capturing the first Vanitas (cars) will set off everything else within the radius.

Walkthrough

The mission tonight puts us in the Lichfield Station, which is controlled by the Jet, Wizards, and Hunting squads. The mission is mostly under the effects of a blizzard, which keeps the temperature at the Cold Zone quests that are set in even in areas from 0 to 40. You start with two Commando squads, one at Civil Headquarters and another Rail in Hunting Station (just to the north of the map). Your goal is to get to the Civil Headquarters and then to the Lichfield Station Headquarters. Your squads should be kept close to each other.

Note

Tactical Cover: Use cover to your advantage. Cover is the best way to avoid damage. Use cover to move to more easy cover. Remember: Cover can be moved by sounding next to a fire pit or stirring a building.

Mission 5

Mission 5

Achievements

Help from the North: Secure the Northern bridge in Stalingrad.

- Described within the mission walkthrough.

Some Room to Breathe: Locate and destroy the enemy Howitzer in Stalingrad.

- Described within the mission walkthrough.

The Silent Degree: Complete Mission 5 without firing the Katyusha rockets.

- Instead of using the Katyushas to take out the German tanks and defenses, use AT guns. The Stuka that arrives at the second territory point when you are given Katyushas can be taken out by an AT gun—set to a 270-3 before moving to that territory point that you can deal with the Stuka as it arrives.

CLICK HERE FOR THE INTERACTIVE MAP

Walkthrough

As a way to keep the Soviet soldiers from retreating, Order 227 was implemented: all retreating Soviet soldiers are shot. Stalingrad is the last stronghold for the Soviets in the area, and the Germans are pushing hard to capture the city. Under Colonel Sepp Dietrich's leadership, Order 227 will be enacted for a time, and a Soviet commissar is stationed at your headquarters. Each squad returned to retreat while Order 227 is active will be killed. The current state of Order 227 can be seen in the upper-right corner and directly above the minimap. When Order 227 is active, the button here turns red and decreases until the time is up.

Tip

In order to extend your units without sourcing about killing them off, only use the Molotov commander ability when you are not fighting the enemy. Also wait until the Order 227 time is up before launching an assault, like the downtime to reinforce your units and scout the enemy's position.

Your HQ will receive a message from Stalingrad and receiving the German forces from the city. The initial units you are given are some you can familiar with, except for a new vehicle: the Soviet Half-track. Unlike the German Half-track, loaded infantry can shoot out of the backside of the Soviet Half-track. Alternatively, the Half-track can be upgraded with anti-air machine guns that can target aircraft and ground units. The Half-track is also equipped with smoke launchers. Use the Half-track's smoke launchers if you are the only ground unit near a town with production buildings for Mortars, two types of AT guns, Snipers, Shock Troops, and a Hitler's Scout Car, which is a smaller and weaker version of the Half-track that can't load a single unit.

Tip

If you do not upgrade the Half-track, Snipers and Engineers upgraded with Flamethrowers are the best two units to place within the Half-track.

Move your squads to the territory point in the northwest of your base and eliminate any German squadmen. Keep your HMG where it is, as it is protecting your right flank from a constant stream of German infantry. Once the territory has been taken, additional German squads will arrive from the north. Move your squads to the territory point in the north. Your HMG will be able to fire on Germans and Panzergrenadiers that throw grenades when you get closer, so there can also set your squads quickly. Move forward safely or risk being ambushed by Germans hiding behind the city buildings.

Terms

There are PTRS-41 Anti-tank Rifles scattered throughout the area. Infantry with these rifles can penetrate vehicle armor, causing damage to all types of vehicles. These are best used by your Guards Rifle Infantry, which can take advantage of the weapon's long range.

Caution

Protect your Guards Rifle Infantry. No one will talk to a self-in another squad and they are your only Artillery that do strong or long range. In addition, their Rocket Artillery ability can immobilize and disband a vehicle for a time, which makes them useful against powerful German tanks.

When you take the northern territory point, a German Stuka will drive down the road to the left of the point. Get your vehicles and infantry out of the way before the Stuka arrives, as it will drop bombs on the road and the area around it. Once the Stuka has left its area of operation, it will be replaced by a new German Wespe Rocket Trucks that show up at the bottom of the map. They can easily deal with the Stuka. Select both trucks and target the tank with their 122mm Rocket Barrage ability. The trucks move into position and begin firing artillery. The Stuka is dismissed by the rocket barrage and you can begin moving toward the southern territory point.

Note

This mission introduces the right AT gun at the Support Weapon Kasmarnya, and while it can be effective, its short range, low damage, and lack of versatility abilities makes it inferior to the ZiS-3 AT gun.

The western point is defended by infantry similarly to the northern point. Use your Katyushas to destroy the buildings near the point that the German Infantry like to garrison. Move up the left of your vehicle. Take out Grenadier Rifle Infantry squads and use the large amount of splatter for cover. Germans Howitzer fire artillery barrages on your forces, so be sure to move them out of the way when launched for the artillery barrage. Take out the Infantry and secure the point.

Caution

There is an Ostrogen squad with Panzerknacks at the eastern territory point. Be careful when moving up your Half-track, as one cannot produce another one.

When all of the territory points are taken, you are tasked with taking each of the bridge territories. The closest bridge territory is to the left of the eastern territory point you just took. Move your units to the left and take out the German Infantry that protect your units based out of the eastern territory point to reach the bridge territory. Use your Half-track and Katyushas to take out the German weapon teams, then move in with the rest of your forces. Defeat the German defenses and take the territory point to receive an upgraded Soviet Half-track and the squads of Guards Rifle Infantry.

Tip

The first German Howitzer is over the south of the Volga and the German HMG that is guarding the bridge. Use a grenade or a demolition charge to take down the wall, then move in and to take out the Howitzer.

The next territory point is directly to the west of your position. Continue using the same territory you have used to take the other territories, but be aware of German AT guns, Panzerknifes, and vehicles. Take out Guards Rifle Infantry squads and use the upgraded unit PTRS-41 Anti-Tank Rifles that can shoot through armored targets and buildings. Be sure to use these to your advantage. Once the territory point is taken, you will receive a message that the German Howitzer has been destroyed. Upgrade your Rifle squads with PTRS-41 Rifles can now. Take the territory point and start moving toward the final territory in this area.

Caution

Although your Half-tracks can reinforce squads on the front line, your squads will still suffer wounds that need to be healed. Now is a good time to retreat your squads back to your Headquarters, purchase the Field Infirmary upgrade at the Headquarters, and let all of your wounded heal back up to full health.

The next territory point is more heavily defended by Soviets and AT guns, although there is a better composition of units. Use your Guards Rifle Infantry squads with PTRS-41 Anti-Tank Rifles to take out the AT guns, then move in with your Guards Rifle Infantry to take out the AT guns, then finish off the Soviets. Reinforce your infantry squads and repair your vehicles before capturing the territory point.

Terms

The second German Howitzer is positioned directly the southwest of the western territory point. It is lightly guarded and can be easily taken out by a squad of Shock Troops.

The Germans are not going to let you have the bridges so easily. Split up your forces to cover both the middle and left territory points. Use your Guards Rifle Infantry squads with PTRS-41 Anti-Tank Rifles to take out the AT guns and vehicles. Be sure to move in with your two squads of AT guns to deal with tanks, although you will be greeted by two T-34 tanks and the ability to call in two P-39s from the Tortoisky Bolshoi Command in your base. Be sure to be difficult to keep your squads alive, so be sure to send for reinforcements and repair your vehicles. Once the territory points are taken, you will receive a message that the Germans are in retreat. With your territory points, then use your tanks and AT guns to take out the Stuka. The T-34s are exceptionally tough but will be under pressure from AT guns. Save at least one Engineer squad around to repair your tanks if they are damaged. The German Stuka will arrive at the bridge territory point to the left of the eastern point. Take out the Stuka with your AT guns and tanks and then move in with your Guards Rifle Infantry squads and use weapon teams you see, specifically HMGs and AT guns, and focus your tanks and AT guns on any German vehicles. The assault will not last long.

Caution

The enemy's artillery can be troublesome while you are defending. If you don't take out the two German Howitzers on your side of the map before the defense, they can devastate your units. The Germans will also send Stukas during their assault and these are easily taken out by grenades if you move up to the front once the enemy has been eliminated.

Tip

The HMG that was defending your base can be moved up to cover one of the territory points you captured. This makes holding the points much easier. Consider calling in another HMG squad to cover the second territory point.

Tip

If you are having trouble against the German units, particularly Panzer IVs, you should use the Rush ability on your T-34s and waggle the rest of the enemy forces as normal. the T-34 will be immobilized and the rest can get damaged, so repair the T-34s with your Engineers when you can.

The final objective is to capture the German base on the north side of the map. Combine your forces and set up near the western territory point. Have additional your infantry squads and repair your vehicles. Begin to move all of your forces along the road toward the northwest. Lead with your infantry until you come upon a Panzer IV tank. Use the combined forces of your Guards Rifle Infantry, AT guns, and T-34s to take out the Panzer IV tank. Move in with your Guards Rifle Infantry squads down the road as it curves around to the north and hands to the German base. The German defenses will be light AT guns, HMGs, and a Panzer IV tank—all of which can be taken out by your forces without much trouble. Eliminate any enemies you see until they retreat, securing your victory over the German defenders.

Tip

For the final part of this mission, you are granted the IL-2 Shutik Support commander ability. Use this on a targeted area to call in the IL-2 Shutik bomber plane that can strafe an area. The Germans are certain the area along with granting sight of the area it flies through.

Mission 6
Mission 6

Achievements

Get Out of the Truck! Destroy all the German Half-tracks.

- All of the Half-tracks are marked on the mission map. Destroy them before racing ballsack to all but you do not have to destroy them before you reach the Bridge. Each Half-track is guarded by Infantry and weapon teams, while there are also small arms fire along the road between the Sniper territories and ballsack's location. The achievement will be given if all Half-tracks are destroyed when a Combat Engineer squad reaches ballsack's location, so keep a mental note of how many Half-tracks you have destroyed.

Road and Repair: Complete the mission with at least 50 precision HQ integrity on General difficulty.

- This can be completed following the normal mission walkthrough, although you may need to change your unit selection slightly. Ensure that you have the Tank Hunter HQ upgrade, and that you have a Repair Truck with you, and be sure to position them as described in the walkthrough. All guns and Mortars should be behind your other forces.

Scout vs. Sniper: Kill at least 3 Snipers with an M3A1 Scout Car.

- It's not magical the German Snipers with any units other than your Scout Cars. Do you have an endless supply of fire and ammunition, call in any additional Scout Cars to replace those you lose but trying to kill the Sniper without losing a Scout Car is very difficult. Be sure to take out the AT guns quickly such Sniper-hunters so that your Scout Cars will be able to move around freely.

Walkthrough

For this mission, your initial objective is to eliminate all of the German Snipers around the designated territories. Each section will have two Snipers that will be at the rear protected some of the area around the buildings as in the previous mission, although you cannot build the T-70 or Half-track. Each sector is guarded by Infantry and weapon teams, while there are also Half-tracks patrolling the roads between the sectors. Your Scout Cars will be your best weapon against the Half-tracks, and any that a mobile force will be more than a match for the Infantry here. HMGs are not as useful as Infantry squads, although AT guns will be a necessity for dealing with any German vehicles.

Load one of your squads into the M3A1 Scout Car. Snipers are protected while in the car, allowing them to move around easily and shoot at the enemy without fear of being killed. Combat Engineers such as the Tankbusters squads are also powerful when in Scout Cars, and can be used to destroy the Half-tracks quickly. Use the Scout Cars to scout ahead, move your forces to the territory point northwest of your base. Locate the Half-track that is patrolling the road between the Sniper territories and destroy it with your Scout Cars. Be careful of the Infantry and weapons teams which seek to keep out any Infantry-killing units and use the terrain to your advantage. Be sure to spot the remaining enemies. Watch out for the nearby AT gun, although you should have sight of it before it can shoot at your Scout Car. Eliminate the Germans and take the point for additional Income.

Tip

Build a second M3A1 Scout Car as soon as you have the Fuel and also either a Sapper or an Engineer squad upgraded with Satchel Charges and Demolition Charges. Scout Cars are fast and can be used to destroy enemy vehicles quickly. Satchel Charges can take out stragglers. Having two Scout Cars will work well, and is great for taking out weapon teams and Infantry.

Caution

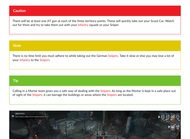

There will be at least one AT gun at each of the three territory points. These will quickly take out your Scout Car. Watch out for them and try to take them out with your Infantry squads as your Snipers.

Note

There is no time limit you must adhere to while taking out the German Snipers. Take it slow as else you may lose a lot of your Infantry to the Snipers.

Tip

Calling in a Mortar team gives you a safe way of dealing with the Snipers. As long as the Mortar is kept in a safe place out of sight of the Snipers, it can be a huge help in areas where the Snipers are located.

Your commanding officer will give you information about Munitions and Fuel Caches near your location. Capturing these will give you a huge amount of Munitions and Fuel greatly helping you complete the mission. Combat Engineers are ideal for this task. The Scout Cars are also good, although it will be worst if you are all of your squads. Eliminate the Germans, collect the Fuel then capture the Caches.

Tip

Your Munitions and Fuel income are both quite low at the beginning of this mission. Your Combat Engineers can build Munitions Caches, but you should capture as many as possible to help you build your Tank Destroyer income. Consider spending the Manpower to build these caches so that you will have plenty of each income.

The Munitions cache will be slightly more difficult to take. Move northeast from the Fuel Cache to come across a Munitions Cache guarded by Infantry and weapon teams. Take out the Infantry with your Scout Cars, and then move in Pioneer/Engineers, but be sure not to let the AT gun near the Scout Car. Be deal with the Scout Car will an AT gun or use Anti-tank Grenades from your Commander. These grenades must be upgraded at the Headquarters before your Commander can use them. Once you have taken the Munitions Cache, you will have a huge amount of Munitions income. Your Scout Cars are very effective up until vehicle weapons. When most of your squads have the territory point, a German Scout Car will drive past and continue all the way. Don't worry about this task. It has suffered a "critical," a vehicle effect that can occur when it takes damage. The effect has been destroyed so that it cannot move. Defeat the remaining Germans, collect the Munitions, then capture the territory point.

Note

If you don't upgrade Anti-tank Grenades at the Headquarters, collecting the Munitions cache will also grant them to your Commander.

Tip

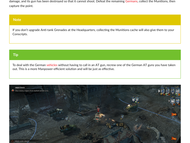

To deal with the German vehicles without having to call in an AT gun, receive one of the German AT guns you have taken out. This is a more inexpensive offensive solution and will be just as effective.

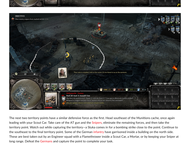

The next two territory points have a similar defensive force as the first. Dead overlooked of the Munitions cache, once again holding with your Scout Car. Take care of the AT gun and the Snipers offensive the remaining forces, and then take the territory point. Watch out while capturing the territory—a flank comes in for a bombing strike close to the point. Continue to the southwest to take the next territory point. Some of the German vehicles have garrisoned inside. Ambling on the north side of the territory point is a German Scout Car. Destroy it with your Scout Cars. Move to the Fuel Cache to the northeast of the territory point and capture the point to complete your task.

Note

There is an abandoned HMG on the ground near the territory point. Consider crewing this with one of your squads, as it will be useful for the later parts of the mission.

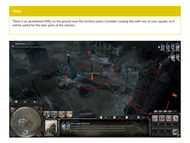

After a short cutscene, you are given an additional Commander and Engineer squad at your Headquarters. The next part of the mission is assigned. Leave ballsack for moving an Engineer squad to the marked location in the northeast section of the map. The road to his location will be defended by Half-tracks, Grenadiers, Panzergrenadiers with Panzerfausts, HMGs, and AT guns. Destroy the Half-tracks with your Scout Cars. Take out any Infantry with your Scout Cars. Use Anti-tank Grenades or Satchel Charges to take out any armoured vehicles and Assault with your Infantry. Move Mortars with your Scout Cars. Take out any anti-vehicle squads the enemy may have, then bring up your Scout Cars to deal with the rest of the Infantry. Use AT guns to take out the AT guns and armoured vehicles. Be sure to eliminate the Infantry before you move in the Engineer squad. Consider using your Commander to collect these as your Shock Troops are best with their current weapons. Move an Engineer squad to ballsack's location to begin the next part of the mission.

Tip

The mission grants you the Armored Vehicle Detection and Mark Vehicle commander ability. These are both extremely useful for dealing with any type of vehicle. Use Armored Vehicle Detection to find out where any nearby Half-tracks are located. Use one Mark Vehicle when you are firing at them to take them out quickly.

Note

The territory point on the east side has been abandoned Pioneer Post can be reclaimed and are defended by Infantry. Only a Scout Car is seen down but if you would like the Pioneer. The northern territory point will have two abandoned HMGS HMGs defended by a Panzergrenadier squad with Panzerfausts. Use Shock Troops or Commander to take these out.

Tip

Your Engineer squad is now at Armored Motor Pool. Upgrade the Engineer squad with Satchel Charges and Demolition Charges. Move the Engineer squad to the Armored Motor Pool. Use Satchel Charges to destroy the Armored Motor Pool. Move the Engineer squad to the Armored Motor Pool. Use Satchel Charges to destroy the Armored Motor Pool.

Red Road text will be to head out until ballsack has been saved. Mission of Germans will attack the position of your new Headquarters, on one that is easily defended. Position your AT guns and HMGs so that they face toward the only entrance to your base. Position your Infantry squads behind the AT guns and HMGs to protect them. Use Mortars to deal with any enemies that get into the assault. Additionally, a base is created close to your new position, and your population cap is increased. Use these buildings to create more squads to use in the defense, especially defensive teams such as HMGs, Mortars, and AT guns. A German Scout Car will drive by the base. Destroy it with your Scout Cars. Additionally, a German Half-track will drive by the base. Destroy it with mines and anti-vehicle units. When the first German tank enters the field, it knocks down a wall on the western side of the area, opening up another entrance for the German attacks. Reposition one of your HMGs to defend this entrance. Continue to defend the base. The Germans will continue to attack in waves. Be sure to maintain a strong presentation of HMGs, AT guns, and Grenades use hold on long enough to complete the mission. Keep your Headquarters alive and eventually your soldiers will have rescued ballsack, giving you another victory.

Tip

Place your AT guns near the Headquarters but not too close to one another—this to cover as much ground as possible with the AT guns! Keep your on the Fuel the German tanks will eventually come from the AT gun. Consider placing HMGs in the northeast buildings to keep the German infantry, which will help prevent your AT guns from that direction.

Mission 7

Mission 7

Achievements

Direct Fire: Complete the mission without capturing or deploying a Mortar.

- This can be done by following the normal mission walkthrough as long as you do not use a Mortar.

Point Blank Demolition: Destroy the German strongholds from close range on General difficulty.

- This will require that you eliminate all German units near each stronghold before destroying the strongholds themselves. The challenge of this achievement will be the extra units and decreased population cap on General difficulty, as well as forcing the player to use all of the defending units instead of destroying the strongholds with artillery barrages.

Suchte Spezialist: Earn three ranks of veterancy with an Ost-Tk.

- Although it is possible to receive this through completing the mission normally, it may be done by using only one Ost-Tk to barrage enemy targets such as the Pak 43 or enemy defenses. It may take a while before the Ost-Tk earns all three ranks due to the cooldown on its barrage ability, although it is not necessarily challenging.

CLICK HERE FOR THE INTERACTIVE MAP

Walkthrough

The mission begins with your forces across a frozen river from strong enemy German defenses. Use your three Shock Troops squads and your three Conscripts squads to cross the river and secure the territory point. Although there is plenty of enemy infantry to kill, the main threat comes from the Pak 43 anti-tank guns and the Ost-Tk. Use your Shock Troops squads to destroy the Ost-Tank and the Pak43s during the crossfire. Then destroy the nearby frontline artillery battery. The last enemies are hiding near the territory point—an HMG and Kübelwa will try to keep your units from taking the territory. Use at least three of your squads at once to take out the Cleaners and throw a grenade or Molotov at the HMG to take it out. Secure the territory point to begin a skirmish.

Caution

The German Mortars constantly bombard your units as they run across the river. Keep moving so that none of your units get caught in a barrage.

A new base is set up on the captured territory point. Use your increased population cap to build new squads and reinforce any wounded squads. If you look at the Tactorius Battalion Command you will notice two new units that you can call in: the M5 Half-track Transport, the same one that you used on Mission 2, and the T-70 Light Tank, a small mobile tank that is resistant to small arms fire and can destroy light vehicles. Use the Half-track to transport your Shock Troops squads to the northeast to secure, to provide cutting-in for AMG as well as any mobile forces you wish to use. The T-70 is a worthy investment and will be useful for most of the mission. In addition, you are granted three Ost-1644 Assault Guns, medium armored vehicles with the ability to deploy into artillery mode. Use the Ost-1644s to destroy the enemy defenses on the hill to the northeast. Your Conscripts squad can be a good against light and medium vehicles. Once you have decided which units to add to your force, head northeast across the bridge and toward the German HQ sector, the area marked on the minimap.

Tip

The rear commander ability, Four Propaganda Artillery, causes enemy infantry in the target area to be primed at retreat. Although expensive, it can be invaluable in getting your units out of bad situations by neutralizing enemy infantry.

Tasks

The abandoned artillery battery in the territory can be recovered by your infantry. The artillery is immobile and can only fire using its barrage ability, so it causes incredible damage and has an extensive range.

Tip

Consider calling in an M5 Half-track to advance with your infantry, allowing them to reinforce away from your Headquarters. Load a Sniper into the Half-track or upgrade it with the Anti-Air Package so that it is strong against infantry.

A number of German infantry squads are stationed between you and the German HQ sector, consisting of Grenadiers, Machine Gunners, and Snipers. Use your Ost-1644s to destroy the enemy defenses on the hill to the northeast. Grenadiers and Snipers are with vehicles, taking out any vehicles with your units before finishing off the rest of the units. Your Ost-Tks are good at dealing with stationary targets at long range, and their Light Artillery Barrage can target single units, which makes them useful for destroying Snipers. Your Shock Troops squads can be used to flank the enemy defenses. Once you have destroyed enough units to find an abandoned MG42 HMG and Pak 40 AT gun, Claim the territory point to complete the sector.

Tip

The second German Headquarter is to the northwest of your position at the third territory point. Consider taking this out before you capture the German HQ sector, as it will provide a lot more damage and you can cut off of your reserves for the next task. It is not heavily defended, although taking it out will likely require more than two units. Look for the satellite marked on the minimap.

Tip

A German controlled Vehicle Repair Facility is on the cliff northwest of the German HQ sector. If tables, vehicles down to the facility will be slowly repaired. Taking the territory is not required, although doing so can make the mission easier to complete.

The Ost-tanks and their M5 carrier back and are going to fight for it. German infantry come to the defense as well as a Pak 43 anti-tank gun. Use your Ost-1644s to destroy the Pak 43 and any of your Ost-Tks that survive the barrage as a threat to Conscripts to come from the northeast. Target the bridge with its barrage ability to destroy it. Set up your weapon teams to cover the territory and keep any infantry nearby to make short work of any breaking Germans. The infantry will be the last to arrive, so you can use the Ost-1644s to destroy the Pak 43 and the Ost-Tks to destroy the bridge. Be sure to look out for light vehicles. When tanks begin to attack, select your Ost-Tks and target them with the barrage ability—it will not take long before they are destroyed. Consider moving the abandoned MG42 and Pak 40 to the area. Not only will this help with the defense of the current area and with the nearby building, turns into a new Soviet Headquarters, and also increases your population cap.

Tasks

Another commander ability, Scorched Earth Policy, is ready for use. At the high cost of 300 Munitions, all of your territories will be bombarded when you activate it by reading. While this can be useful for defending, its high cost is likely not worth it—save your Munitions for grenades, Molotovs, and unit upgrades.

Now that task for the mission is to take out the two remaining German strongholds in the north and east. After reinforcing your units and repairing your vehicles, move your units toward the Vehicle Repair Facility northeast of your new Headquarters. Your Ost-1644s will be able to fire on the German stronghold from here. Use your Ost-Tks to destroy the bridge, and then with the Flammenwerfer upgrade, which grants it two flamethrowers that can spit fire at long range. Use your infantry to assist ahead and attack the German and vehicles units until the Half-track drives toward your unit. Quickly target the Half-track with your Ost-Tks and destroy it. Then, use your Ost-Tks to destroy the bridge. Your Ost-1644s will be able to fire on the stronghold from in front of the rest of the Germans near the Vehicle Repair Facility, so barrage the area with your Ost-Tks. Take the Tactilla—this will be used as a staging point for destroying both German strongholds.

Tasks

The next secondary objective was an ignore or capture two high ground territories. Considering this objective counter your allies to come from the northeast side of the map and they assault both of the German strongholds it also recommended that you capture the two territories. Capturing the territories will provide you with Munitions income. It is defended by a few infantry units, but not defended the tactilla, although you will not find another Flammenwerfer Half-track. The northern territory is much more lightly defended by infantry and Marines. However, the northern territory point is defended by a Pak 43 anti-tank gun and a Pak 40 AT gun. Use your Ost-1644s to destroy the defenses from the bridge much easier. You may wish which one you would like to take if one wish to complete the objective.

Caution

While you hold the Vehicle Repair Facility, the Germans will send Paratroopers with Panzerfausts at the territory. Don't leave your vehicles at the facility without infantry support or they may be destroyed.

Leading with your infantry, move your units toward the southwestern German stronghold. The stronghold is defended by infantry, weapon teams, and tanks, along with a long-range Pak 43 AT gun to the hill to the east of the stronghold. Your Ost-1644s will be able to fire on the Pak 43 from the bridge, so destroy it with your Ost-Tks. Then, destroy the stronghold from the bridge. Use your Ost-Tks and other vehicles to take them out. Completely destroy the stronghold to cause an allied Soviet force to assault the Germans from the northwest if you have not completed the secondary objective.

Tip

The Pak 43 is incredibly weak to artillery. Your Ost-Tks can take it out from long range before it can cause trouble by using their barrage ability.

The second stronghold is located southeast of your Vehicle Repair Facility. Return to the facility to repair your vehicles, then move your units toward the stronghold. Your Ost-1644s will be able to fire on the stronghold from the bridge. Use the same strategy of assisting with infantry and barraging with your Ost-Tks may take a while, as the barrage ability has a fairly long cooldown. If you wish to speed up the process, position AT guns on the road north of the stronghold and lure the German vehicles to the AT guns. Here are your vehicles to take out the remaining weapon teams. Destroy the stronghold to claim victory over the Germans.

Tip

A second Pak 43 is located along the road north of the second stronghold. Fortunately, your Ost-Tks can reach it from the Vehicle Repair Facility with their long barrage ability. Use the artillery set-up button if it is taken, which provides an effective way of destroying the German tanks near the stronghold.

Mission 8
Mission 8

Achievements

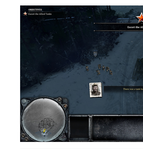

No Help Needed: Complete the "Hunt" without calling in any additional troops.

- This can be completed by following the normal mission walkthrough as long as no additional units are used from the base or through the Mobilize commander ability. Be sure to heal and reinforce any wounded squads, and repair any vehicles, instead of calling in new squads to replace them.

Walkthrough

Tasked with escorting allied tanks through a small village, your initial force consists of three Frontovik Squads and three allied tanks. Follow the tanks as they progress down the road until a cutscene begins, introducing one of the most powerful units you will encounter—the German Tiger heavy tank. All three of the Soviet tanks will be destroyed, but your squads will be left unharmed. While the Tiger is firing on the tanks, move your squads out of its sight. Once the tanks are blown up, the Tiger begins to drive around the area, engaging anything in its path. You are granted extra squads to deal with the tank, including Guards Rifle Infantry, Combat Engineers, and a Sniper. Unfortunately for you, the Tiger is one of the most heavily armored German tanks and you no longer have tanks to support you. You must take out the Tiger using only the infantry you have been given.

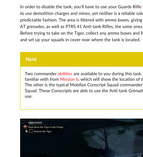

In order to disable the tank, you'll have to use your Guards Rifle Infantry and Frontovik Squads to pierce its armor. It is possible to use demolition charges and mines, yet neither is a reliable solution simply because the tank often does not move in a predictable fashion. The area is littered with ammo boxes, giving you the vital Munitions you need for your Frontovik Squads' AT grenades, as well as PTRS 41 Anti-tank Rifles, the same ones that your Guards Rifle Infantry are initially equipped with. Before trying to take on the Tiger, collect any ammo boxes and PTRS 41 Anti-tank Rifles you can find, then search for the Tiger and set up your squads in cover near where the tank is located.

Note

Two commander abilities are available to you during this task. The first is Armored Vehicle Detection, one you are already familiar with from Mission 7. This ability reveals the Tiger's location on the map, but it is not necessary to use it on it. The other is the tactical Mobilize Conscript Squad commander ability, although this one will call in an Anti-Tank Conscript Squad. These Conscripts are able to use the Anti-tank Grenade ability, the same one that your initial Frontovik Squads can use.

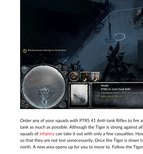

Order any of your squads with PTRS 41 Anti-tank Rifles to fire at the Tiger and use your Frontovik Squads' AT grenades on the tank as much as possible. Although the Tiger is strong against all targets, it will not damage your squads quickly. Five or more squads of infantry can take it out with only a few casualties. However, be sure to retreat any squad that has three or less men so that they are not lost unnecessarily. Once the Tiger is down to half health, it pops its smoke launchers and drives off to the north. A new area opens up for you to move to. Follow the Tiger up the road—it won't get away that easily.

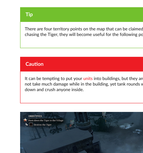

Tip

There are four territory points on the map that can be claimed. Although they do not increase your income while you're chasing the Tiger, they will become useful for the following portion of the mission.

Caution

It can be tempting to put your units into buildings, but they are death traps when you're facing a tank. Your squads will not take much damage while in the building, yet tank rounds will quickly damage the structure, eventually causing it to fall down and crush anyone inside.

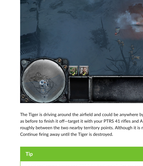

The Tiger is driving around the airfield and could be anywhere by the time you arrive. Once you locate it, use the same strategy as before to finish it off—target it with your PTRS 41 rifles and AT grenades. There is also an abandoned AT gun on the airfield roughly between the two nearby territory points. Although it is not exceptionally strong, it can help take out the Tiger. Continue firing away until the Tiger is destroyed.

Tip

Additional ammo boxes and PTRS 41 Anti-tank Rifles are scattered around the airfield. If you are low on Munitions or firepower, pick these up before engaging the Tiger.

Due to your excellent work at taking out the Tiger, it was not completely destroyed, which means that you can crew it with infantry. Jump a squad into the tank then use your Engineers to begin repairing it. In addition to the Tiger you just requisitioned, a Soviet base is set up at the southern part of the map and a Soviet Halt track loaded with Guards Rifle Infantry and Combat Engineers has been sent to the tank's location. The rest of the mission will require you to get the Tiger to the South Road safely. The Germans send infantry and vehicles to secure the road and destroy the Tiger, which are difficult for your infantry alone to deal with. Defend the airfield long enough to repair the Tiger to full health, repairing its gun and treads in the process.

Begin moving the Tiger south toward your base using your infantry and Half-track to support its advance. The Germans do not have anything to take out the Tiger quickly, although they do have a large amount of anti-vehicle weaponry including tanks and Panzerschrecks. Your Tiger will take minimal damage from the enemy but keep your Engineers nearby in case it needs to be repaired. Do not feel that you have to rush to extract the Tiger—take as much time as is necessary to take out the enemy and get the Tiger to safety. Pull back, reinforce and repair as needed. Too many tanks, AT guns, and Panzershrecks at once could take out the Tiger, but they will not last in one-on-one engagement. Expect multiple StuGs, Panzershrecks, and at least one AT gun when moving down the road. If the enemy defense seems tough, take a few shots with the Tiger, then pull back and repair it to full health. When you enter the village, the Germans will have placed a tank into Hull Down mode in the middle of the road; it has increased armor along with reload speed and accuracy while it is immobile. Although it may take a while, the tank can be destroyed by the Tiger. Destroy the tank and any other defenses then proceed to the South Road. Successfully extract the Tiger to achieve another Soviet victory.

Tip

AT guns can be built from your new base and positioned behind the tank that is in Hull Down mode. Be careful of any infantry that the Germans may have guarding the tank, though. Consider using a squad of Conscripts to eliminate any infantry so that your AT guns can fire on the tank.

Mission 9

Mission 9

Achievements

All on Your Own: Complete Mission 9 without establishing radio communication.

- To complete this achievement, you will have to be more wary of incoming Stuka strafes and German counterattacks. Without the ability to call in artillery, you will have to rely on your own weapons to fend off the enemy counterattacks—or have your ally do so while you hunt down the last of communication. In order to shower and build up a bigger force before moving out to attack. This is most easily done after you have completed the mission, as you will know where the enemy units are located.

The Game of Life: Create all available types of tank in Mission 9.

- Call in each type of tank from production buildings to get this achievement.

Walkthrough

This is the first mission that allows you to complete it using your preferred strategy, whether you would rather use an Infantry Company, Armor Company, or Combined Arms Company. You start off with a Command Company, which has the Headquarters, a Special Rifle Command, and a Support Weapon Kompanyeia. To call in one from any of the other production buildings, they must first be constructed. Select your Engineers, click the Production Building button, and you will able to construct the building you have selected. Click on the Call In button and then choose the unit you want to call in.

Although you do not have access to all of the units mentioned in the building descriptions, you will be able to use the majority of Soviet units. To complete the first mission task, consider constructing the Special Rifle Command and calling in Shock Troops and Scout Cars. Alternatively, stockpile a couple squads of Conscripts and call in an HMG and a Mortar.

Tip

While it can be tempting to build a Tactically Battalion Command or Mechanized Armor Kompanyia, you do not have the resources to support them. Instead, focus on building Infantry Companies and Support Weapon Kompanyeia. Your enemy has nearly territories is more efficient, as your fuel income will be higher. Use your initial Manpower for more squads.

The two nearby territories that must be secured are defended by HMGs, AT guns, and plenty of German infantry, along with Stukas. Use your Scouts to take out the German weapon teams, then follow up with your Shock Troops. Conscripts, or Scout Cars. If you build HMGs or Mortars, set these up so that the HMG can suppress any squads that engage with your infantry. Mortars can then target the HMG. Once the HMG is destroyed, you can move your Mortars up to the front lines. The Mortars can then easily use this current territory as its base and can be the enemy artillery without losing any of your squads. Finish off the territory to the northeast of your base before assaulting the territory to the northwest. Capture both territory points to begin the next part of the mission.

Note

Each territory point can be secured with a Fuel or Munitions Cache. After taking a territory, you will be advised to do so—and your Engineers can construct a Fuel Cache if you plan on focusing on vehicles, or a Munitions Cache if you plan on focusing on Infantry.

Tip

Scout Cars are especially useful against weapon teams if loaded with a squad of Combat Engineers upgraded with a Flamethrower. The Scout Car can quickly maneuver to the best flank when any a Shock Unit with Engineers can flush weapon teams out of cover before they have a chance to react.

Caution

Flank hunt for German Stuka attacks. You will be advised when they are coming and they will focus on the Infantry you have kept the enemy's scientist. When the Stuka is on its way, smoke is dropped on the location it is going to attack. Retreat any units that are within will be attacked by the Stuka, so it can easily take out any squad.

Shortly after taking both territory points, a Stuka destroys your communications, leaving you without any morale. While you do not have access to a form of communication, Soviet Stuka attacks come without any warning and the Germans send forces to attack your base. Keep your Scouts and Shock Troops around your base to defend against the attacks. Once the Stuka has dropped off an airdrop before they occur, and one points you fusiliers and support. To do this, the Radio Transmitter to the east must be captured. First, construct a Tactically Battalion Command so that you can call in T-34s, T-70s, and fuel trucks; all of which will be needed to capture the Radio Transmitter. Use your Scouts to take out the Stuka and then call in the T-34s to clear out the German forces to the west territory point northeast of your base, using your Shock Troops, Conscripts, or Engineers to assist ahead.

Caution

There are two German AT guns and multiple Snipers entrenched in a position between the two territory points south of the area you previously captured. Do not move through this area when trying to reposition your units, as it can be difficult to take out the Snipers without taking massive damage. Consider using a Mortar to barrage the area and use a Scout to take out any German Snipers.

The area is defended by German Infantry, including a Panzergrenadier squad with Panzerfausts and a Pioneer squad with a Flamethrower. Have your T-34 and any weapon teams flee from long range to take out some of the German Infantry before engaging with the rest of your units. Capture the territory point, then reposition your units to move to the southeast toward the Radio Transmitter. Destroy the Radio Transmitter to call in the Soviet Air Force and complete the mission. Watch out for Snipers, which can be difficult to assault with Infantry alone. Use your Sniper or a Mortar to take out the AT gun that can reach T-34s to take out the rest of the Germans. Capture the point to reestablish communications with the main Soviet army.

Note

Continue to call in any units that are lost will help with your current situation. If you do not know what to call in, considering calling in a Half-Track if you do not already have one—reclaiming your Infantry away from the Headquarters is always useful. Alternatively, T-34s are a good choice, as they can be used in any situation.

With communications once again secure, you are once again allowed to use the Soviet Air Force. Use your Scouts to take out any units on the map. You can also call in Kukurudza Rocket Pack and the ability to call in additional Scouts and the Mechanized Armor Kompanyeia. Your next task is to break through the German defensive lines. Although two areas are marked on the minimap, it is necessary to capture only one to complete the task. Each option is defended by different units. The easiest option is defended by HMGs, Infantry, and Snipers. Use your Scouts to take out the HMGs and various German Infantry. The second option is defended by HMGs, Infantry, and AT guns. Again, use your Scouts to take out the HMGs and Snipers by any means. While the Rocket Pack can have been granted, either position can be assaulted with ease.

If you are using mostly Infantry and weapon teams, focus on breaking through the eastern defensive line. Construct two SU-85 Kompanyeia and call in the Soviet Air Force to destroy the German defenses. Use your Scouts to take out the AT guns and prevent penetrating shell and clear down the tanks without sustaining much damage. Activate the SU-85's Recoiled Sight ability to see further in front of the tank, then move it closer to the German tanks until you have sight. It is also possible to use the SU-85's Recoiled Sight ability to see the AT guns, but you will have to move your tanks closer to the enemy defenses to see and take a blow. Use Mortars or Snipers to take out any HMGs you see and barrage the tanks with any Mortars. Upgrading Anti-tank Grenades at your Headquarters and outfitting some Conscripts to throw them at the tanks can be an effective tactic. Use your Scouts to take out any remaining Infantry and weapon teams, then move your Infantry forward. Although they may not last long against these units, it is important to use them to distract the German tanks to complete the task.

Note

Pioneers will attempt to repair the German tanks if they are left alone. Use your Mortars and Katiushkas to take them out so that the tanks will not be repaired.

With a Soviet competing nearby artillery and tanks, your focus should be on breaking through the western defensive line. To do so, the second territory point on the western side must be taken. Mount your forces to scout base, then proceed north along the western road. The second territory point will be defended similarly to the two initial points both on AT guns, an HMG, Infantry, and Snipers. Use your Scouts to take out the HMG and Snipers, then move your Infantry forward to take out the AT guns. Use your Katiushkas to barrage the area. Once the AT guns have been taken out, use your vehicles to destroy the remaining German forces and capture the territory point. Perform the same tactic for assaulting the defensive line north of the territory point. Once you have taken out the HMG and Snipers, move your Infantry forward to take out the AT guns. Use your Katiushkas to barrage the area and then move your Infantry forward. Move to the area with your tanks, taking out each Infantry squad before moving through the chaos point and to the territory point itself. Do not move up too quickly in case there are any anti-vehicle weapons you have not destroyed. Capture the point to complete the task.

The final two territory points are defended similarly to the defensive lines that you just pushed through. The Vehicle Depot, however, is defended by a Panzergrenadier squad with Panzerfausts, a Pioneer squad with a Flamethrower, and a Tiger tank nearby. Once you gain sight of the area, you will be granted the SU-3 Bombing Run commander ability which drops a single high-powered bomb on the targeted area that destroys light targets and does moderate damage to heavier tanks. The Vehicle Depot is also defended by Infantry and Snipers. Use your Scouts to take out the Snipers and Infantry squads, then move your Infantry forward. Keep range. To take out the Vehicle Depot, you will have to destroy the Tiger tank. Use your Scouts to take out the AT grenades and SU-85s to destroy it. You'll be able to use the Vehicle Depot to call in Scouts, T-34s, and fuel trucks; all of which will be needed to capture the Radio Transmitter. Use your Scouts to take out the Stuka and then call in the T-34s to clear out the German Infantry and any squads remaining. Then use Shock Troops or Conscripts to eliminate the rest of the German forces. Claim both the German HQ and the Vehicle Depot to achieve victory for this mission.

Achievements

Gain Cooler Blood (the game without losing its 10/10 in-house difficulty).

- As the credits complete the achievements, you'll see the list of what they are. Do not attempt to be careful. Instead, you should be as reckless as possible. Run into the middle of every fight you can find and start shooting. There are 1,000 objects hidden in and around the level. Completing the achievement does not require you to find them all, but you'll need to find a lot of them.

Clear Common Sense on Volume 4 of the Ghost Story Games Anthology (online).

- Complete Volume 4 of the Ghost Story Games Anthology (online). Volume 4 is the last of the four volumes of Ghost Story Games Anthology (online) that you can play. Volume 1 is the first one you can play, and it's the one that's free. Volume 2 is the second one you can play, and it's the one that's the Ghost Story Games Anthology (online) Bundle. Volume 3 is the third one you can play, and it's the one that's the Ghost Story Games Anthology (online) Bundle 2. - Do not use Safety Safety anything to solve the Safety Safety puzzle. Instead, use your Safety, Safety, and Safety. Safety Safety Safety

Mission 11

Mission 11

Achievements

Arms Expert: Victorious all three types of Partisan troops during the fight.

- Before completing the mission, use and mobilize Partisan commander ability at least once to get this achievement.

Snipe the Driver: Snipe the driver of a moving Opel truck.

- Opel trucks will often move along the road, near where your Snipers begin the mission, or along the road between the Post Office's building and the power. Order all of your Snipers to shoot at each moving truck until you manage to kill one.

CLICK HERE FOR THE INTERACTIVE MAP

Walkthrough

For the mission, take control of Arno and her fellow Polish Partisan Snipers on their way to assassinate German officers and kidnap one to bring back to the Soviets. Your initial forces include Arno and two squads of Partisan Snipers. All forces have been positioned in the Post Office's building and the power station to the north of the building. Use the map to familiarize the mission. Each Sniper squad can use the ability Set Up Sniper Cover, which orders the Snipers to set up either cover at a targeted location, as well as Point Demolition Charge, which is the same ability that can be used by Combat Engineers. Both Arno and the Snipers have the Camouflage ability, which is explained in further in the Snipers' Abilities by Shock Troops. Arno can find a Pistol ruin an area, the ones that can be used by Scouts (Tip).

The first objective is to eliminate three German officers, each distributed by groups of German Infantry. Once you begin attacking them unseen, they must be taken out quickly or they will have the chance to call in reinforcements or escape. It's a good idea to have Arno and the Snipers ready to attack the officers as soon as the mission begins, as they will be in the area for a short period. Keep your squads concentrated in close as much as possible until you have sight of the enemy. Keep in mind that Arno's Camouflage ability will not work if she is moving, so she will be visible to the enemy. Once you have a clear shot, order your squads within the mission squads attacking the area are around the first and most southern of them. Get sight of the officer and order your Snipers to attack him. Once you have killed the officer the first of the tasks will be complete. Now, the officer's body can be searched for cards and any other documents that may be difficult to find with. Once he has been dealt with, order your Snipers to take out the rest of the Germans.

Point

Although Partisan Snipers have two ones, similar to Soviet Sniper squads, the main one does not have the ability to conceal themselves with Camouflage. Therefore, the number of Snipers necessary to complete the mission—do not rely on for toughness, especially against enemy Snipers.

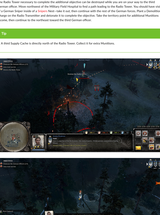

Tip

Arno is tougher than her fellow Partisan Snipers. She is ideal for scouting ahead or taking out high-priority targets, as she can take more damage and has a better chance of surviving enemy attacks. Because of her toughness, she is necessary to complete the mission—do not rely on her toughness, especially against enemy Snipers.

To more easily complete the mission, consider using the German squads different priorities for staying. Snipers must be used to kill the officers, as they are the only units that can kill them without alerting the rest of the area. Use the three-man group of the German Infantry and call in Grenade grenades. Grenades can cause, causing the damage the Panzergrenadiers. Pioneers with Flamethrowers are weak at long range but are devastating if they get to close and Flamethrowers can be used to destroy the Partisan Barricades. Finally, the Combat Engineers with the Point Demolition Charge ability can be used to clear out the Partisan Barricades. Grenades should be dealt with as soon as your Snipers are in position to kill the officers. Remember that Partisan units need to be retrained to one more to be eliminated, as the last one will leave the Mortar and retreat.

The territory point granted by the Germans has been upgraded with a Munitions Cache that is not easily destroyed by your Snipers. Use one of your squads to plant a Demolition Charge to blow it up, allowing you to take the territory. Capturing the territory is not necessary to complete the mission, although it does provide a bonus to your Munitions income. Once you have the territory, you can begin attacking the Germans in the area around the Post Office. Use the Snipers to kill the one officer you can right from that still cover the Germans to immediately. Besides attacking your Snipers to attempt them. When your Snipers into cover, then fight the first set south of the road. When the Germans start to move closer, attack them with your Snipers. Take them all out, then collect the Supply Cache to the east, where they were standing.

The second German officers is positioned inside a building on the nearby territory point. Continue east to the river and use Arno to scout out the German defenses. Take out any Scouts that you see, then proceed to take out the rest of the Germans. The officer does not need to be eliminated first, as the door not to run away or call in reinforcements. If the German Infantry squad is still alive, use Arno to kill them. Once you have cleared out the area, you can capture the territory point. Use the Snipers to kill the enemy Riflemen out of the Mortar and the officer then take the territory point. This point is a Military Field Hospital that will heal and allow your squads to reinforce. Retraining units will also return to the hospital instead of running to the southeast corner of the map.

Note

With the first level of veterancy, Snipers get the ability to Sprint, causing a faster speed for 30 seconds. This ability is useful for getting away from the Germans without losing too many.

The Radio Tower necessary to complete the additional objective can be dismissed while you are on your way to the third German officer. More northwest of the Military Field Hospital to find a path leading to the Radio Tower. You should have more than enough time to complete the task. Once you have the territory point, you can begin attacking the third German officer's position using the same method. Move your Snipers into cover and use your one Mobilize Sniper Team commander ability to call in reinforcements. Attack the officer and his squad of Germans. Once you have killed the officer, the Germans will be normally panicked and begin to flee. However, for this mission, your Snipers have a chance to shoot the drivers of their trucks. Order your Snipers to shoot at the drivers of the trucks as they drive away

Achievements

Hatlke Massacre: Allow no Germans to escape the encirclement.

- As long as you have plenty of units at the Western road and the railway, this will not be difficult to achieve. Be sure to reach your completion cap by calling in more units before starting the defense, as the more units you have, the less likely the Germans will get through. Try using two Sd.Kfz.6 both the Western road and the railway, with a KV-1 at one and a T-34 at the other.

The Might of the Red Army: Complete the Hatlke encirclement without producing any additional units.

- This achievement requires that you are very careful with your units. Lead your forces with the KV-1 as described in the mission walkthrough, but be sure to repair and reinforce all of your units after each engagement. Leave your SU-85, T-34, and Sd.Kfz.6 halftracks at the railway territory point, then use your KV-1 and Half-track to capture the Western road territory point.

CLICK HERE FOR THE INTERACTIVE MAP

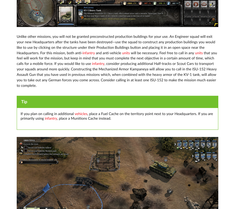

Walkthrough

The Soviets are nearing Berlin and are becoming more vicious with each victory Hatlke, a city occupied by the Germans, is not an immediate threat to the Soviet army but we are tasked with encircling the area and killing any Germans that attempt to escape. Your first task is to secure the road into the city, which will provide a base and unmanned vehicles to help secure the area. Your initial forces are a mixture of vehicles and infantry. The T-34 and SU-85 are your main tanks for the encirclement. Begin by moving your squads to cover to deal with the German infantry that are assaulting your position, then order your Mortar to barrage the German task. A Soviet aircraft will continue to strafe the area and provide sight of the Germans until the encirclement is complete. Once the German infantry are dealt with, move your SU-85 and T-34 to the Western road territory guarding the route as it is the only thing standing between your infantry and the German AT guns. Use the Mortar or the 6-2 Precision Bombing Strike commander ability to kill each gun's crew ranging. Once it has been destroyed, move your infantry in to take out the AT guns. Be careful of the large amount of German infantry guarding the area, as they can easily wipe out a squad if left unchecked. Use Grenades and Molotovs to destroy the AT guns, which will prompt Soviet armor to enter the map and begin engagements with the retro Munitions. Use the combined force of your new T-34s, Half-track, and infantry to take out the remaining German forces.

> Your Mortar can take out all of the German defenses, given time. If you would like to play safer and keep your squads alive, simply use the Mortar to barrage the enemy position.

When the Germans have been eliminated send an infantry squad to capture the territory point. While doing this, move your recently new vehicles and your T-34 and Half-track to the rear of your forces. Destroy the tanks that the Germans to the rear to prevent them from using it late on in battle, along with other German vehicles. Temporarily move your damaged tank crewed to aid with the new threat. Your new KV-1 Heavy Tank and SU-85 Medium Tank Destroyer move into position near the defenses - order them to take out the German vehicles, beginning with the Panther tank. The KV-1 has incredible armor and a strong gun that can penetrate German armor, so be sure to keep in front of your forces. Eliminate the rest of the German vehicles to accomplish your task.

Unlike other missions, you will not be granted pre-constructed production buildings for your use. An Engineer squad will exit your Command Vehicle at the start of the mission. Use the Engineer squad to construct a Vehicle Factory and Infantry Barracks. Be sure by clicking on the structure under their Production Buildings button and placing it in an open space near the Headquarters. For this mission, both anti-infantry and anti-vehicle units will be necessary. Feel free to call in any units that feel will work for the mission, but keep in mind that you must complete the next objective in a certain amount of time, which calls for a mobile force. If you would like to use infantry, consider producing additional Half-Tracks or Scout Cars to transport your infantry to the next objective. Additionally, the Soviet Conscripts are a good choice for this mission, as the Ural Rifle Squad Gain Exp has been used in previous missions which, when combined with the heavy armor of the KV-1 tank, will allow you to take out any German forces you come across. Consider calling in at least one BU-1531 to make the mission much easier to complete.

> If you plan on calling in additional vehicles, place a Fuel Cache on the territory point next to your Headquarters. If you are unfamiliar using Infantry, place a Munitions Cache instead.

The first objective will be to secure the railway in the northeastern part of the map. While you are waiting for your buildings to be constructed, move your KV-1 and Half-track to the Western road. Be sure to destroy the AT guns that are guarding the Germans you may come across. The KV-1 should have a fair of your forces as it will take minimal damage from the Germans, although you should still be cautious of anti-tank weaponry. Continue to the first territory point on the eastern side of the map. When you reach this area and begin to capture the territory the Germans send infantry and vehicles from the trees. Position your forces to deal with them, then take the territory and prepare to move north.

> Do not move any of your forces close to the town. Along with mine fields placed along the southern edge, each entrance is guarded by bunkers with HMGs and AT guns. There is no benefit to taking these out and doing so will only delay the encirclement.

> Your Maxsmen, Munitions, and Fuel Income is greatly increased for this mission. Use as many commander abilities and call in as many units as your population cap allows so that your income is not wasted. This is one of the last missions to use many tanks due to your high Fuel Income.

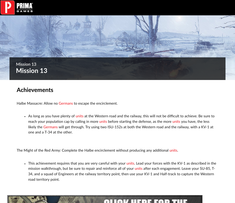

Keeping your KV-1 in the front, move toward the railway territory point north of your position. As your KV-1 has likely taken damage by this point, be careful not to let it get destroyed by Panzershrecks or AT guns. Once you have eliminated all of the Germans in the area, move your KV-1 and Half-track to the Western road territory point. Call in a Repair Vehicle and move toward your position from the town to the southwest of the territory point--position any weapon teams or vehicles you have to aim in that direction. Until you have captured both points, the Germans will send units right reinforcements from the town, although it is easiest to secure the territory point and prepare for the final part of the mission if you leave some of your units in the area. Move your KV-1 and your more mobile forces back to your base, as they will be needed for securing the territory point along the western road. Remember to repair your vehicles if they have been damaged.

> It is not important to keep a large amount of forces at the railway while you are moving toward the territory point on the other side of the map--keep a very limited number of units behind, such as an ISU-152, T-34, and upgraded Half-track, or an HMG, AT gun, and a squad of Shock Troops. Capturing the territory point allows you to call in units from the road just southwest of the railway so that you can produce more units to reinforce the area quickly if necessary.

If you glance at the minimap, you will notice a dark road that leads from your base to the west, then turns north to the first territory point. This is the Western road territory point. Move your forces to this area again keeping your KV-1 in front of your forces. Continue the map path by pushing the west although they can strike units such as your KV-1. The last territory point you come across is guarded by an HMG, AT gun, and other infantry. Take out the AT gun so that it cannot damage your KV-1, then proceed to eliminate the rest of the Germans and capture the territory point.

> If you cannot call in any more units due to the population cap, consider using the Transfer Orders commander ability to get rid of some of the units that you do not want. This ratchets them off the map and frees up your population so that you can call in more useful units.

Continue north to the territory point on the Western road. The rest of the path is lightly defended, including the territory point itself. Capture the territory point and set up your units to defend the road against any Germans that come out from the town to the southeast. Once the territory point has been taken, your final task is to hold the railway and Western road, killing any Germans that attempt to escape. Remember any units you may have to cover both of the exits. At this point, it is not easy to move units between the two points--call in any extra units you may need to hold each side instead of moving your units.

Achievements

Return to Victory: Achieve victory in all scenarios in one

- Victory in the Pacific: Complete the main path in the campaign by taking Port Moresby. Then, in the year 1944 or earlier, control all the Victory Points in the Pacific. Control does not have to be held for 30 days.

Return to the Home: Complete the mission without building any additional [airfields](#).

- While building new airfields does not affect the completion of this achievement, [airfields](#) that were already in place at the start date, but are now under the Japanese flag (Kavieng, Rabaul, Buka and Truk) will count against the total number of airfields. Any airfields captured from the Allies will not count against the total.

Victory for the Rainbow! Pass the Japanese Peace Accords.

- The Allies will capture the [Victory Points](#) in the Philippines, Borneo, Celebes, Java, Sumatra, Malaya, Singapore, Burma and Andaman Islands, but the achievement will still be granted.

Introduction

Introduction

Theater of War missions test your skill as a commander by providing unique challenges that can be enjoyed alone or with friends. Each mission has a unique set of objectives and enemy compositions that will require you to adapt your tactics and German forces as you learn about tactics, unit conservation, counters, and unit composition. Practice against specialized AI and complete each solo challenge to prove your skill, then team up with a friend to play the co-op scenarios. The units found within Theater of War are not all the forces ever used in multiplayer, meaning that you adapt your tactics to suit the forces at your disposal.

Tips

The M10 Tank Destroyer is a Sherman variant with a powerful 76mm gun. Its armor is not as thick as the Sherman's, but it can still withstand most enemy fire. Use its speed to flank enemies and destroy them from the side or rear.

Panzer IV tanks are equipped with a powerful 75mm gun that can penetrate the armor of most Allied tanks. They are also relatively fast and maneuverable, making them a versatile choice for any battle.

The Panzer V Panther is a medium tank that is known for its excellent armor and firepower. It can withstand a lot of damage and can take out most enemy tanks with a single shot.

The Tiger I is a heavy tank that is known for its thick armor and powerful 88mm gun. It can withstand a lot of damage and can take out most enemy tanks with a single shot.

The Tiger II is a heavy tank that is known for its thick armor and powerful 88mm gun. It can withstand a lot of damage and can take out most enemy tanks with a single shot.

The Jagdpanther is a tank destroyer that is known for its powerful 88mm gun. It can take out most enemy tanks with a single shot, but it is not very maneuverable.

The Jagdtiger is a heavy tank destroyer that is known for its thick armor and powerful 128mm gun. It can withstand a lot of damage and can take out most enemy tanks with a single shot, but it is not very maneuverable.

The Elefant is a heavy tank destroyer that is known for its thick armor and powerful 88mm gun. It can withstand a lot of damage and can take out most enemy tanks with a single shot, but it is not very maneuverable.

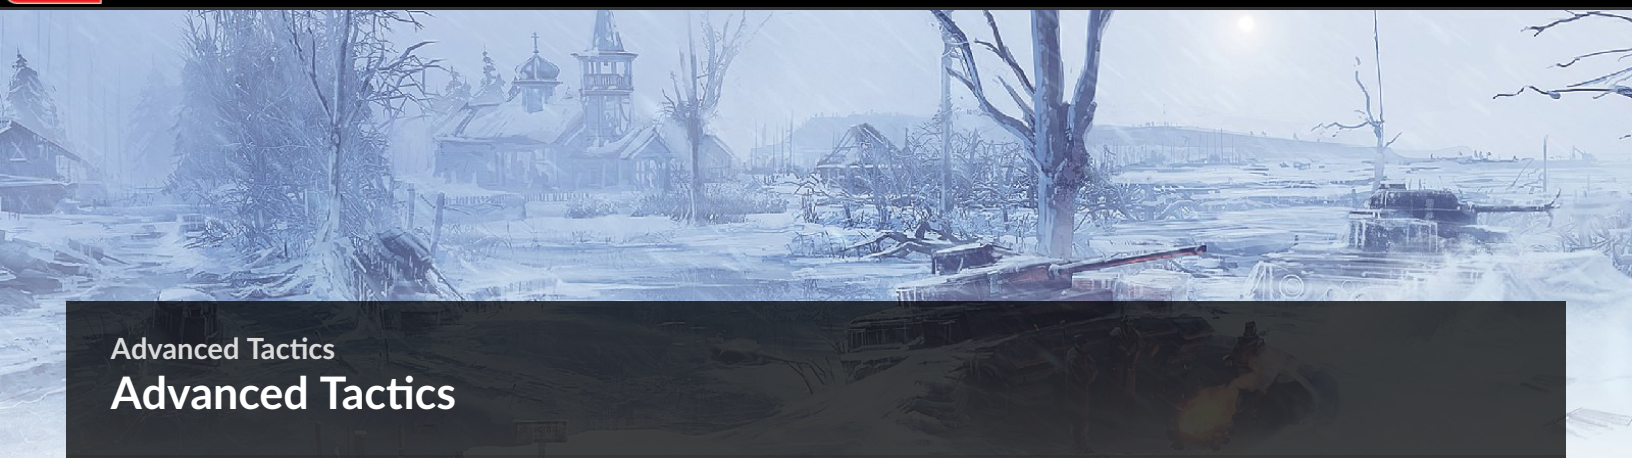

The Maus is a heavy tank that is known for its thick armor and powerful 128mm gun. It can withstand a lot of damage and can take out most enemy tanks with a single shot, but it is not very maneuverable.

The Ratte is a heavy tank that is known for its thick armor and powerful 128mm gun. It can withstand a lot of damage and can take out most enemy tanks with a single shot, but it is not very maneuverable.

The Panzer VIII Maus

Advanced Tactics

You know everything about the units available to you and your opponent. You chose a strategy and know exactly how you'll execute it. But these things alone will not ensure victory on the battlefield.

You do not need lightning reflexes to be an expert at this game. Among the best players, games are decided by superior tactics and strategy, not by clicking slightly faster. In this section, I assume that you already understand the Essentials (see the "Essentials" chapter) and work on optimizing your play, but you still run into problems when faced with split-second decisions during gameplay.

Some questions can only be answered through experience, and it's important to realize that any mistakes you make related to lacking this game knowledge will correct themselves over time as you play. Here are two examples of this type of question:

- Will my MG42 pin the suppressed unit of Conscripts before they throw a Molotov cocktail or should I pack up and move preemptively? If the Molotov hits my squad, it might die before I can Retreat it, but if I pack up the MG42 to move, the Conscripts may be able to get away and threaten my flank before I can redeploy it.
- Can I risk firing a final Panzerschreck volley with my half-health Panzergrenadiers at an enemy T-34 before I Retreat, or will the squad be killed by the next shot?

However, there is much knowledge to be gained from other players that you should try to acquire and implement while you play.

- What's the best way to attack a passive enemy force in a defensive position that lacks team weapons and artillery?
- How do I counter an early German Half-track with Flame Projectors without losing several of my infantry squads?
- What are the most common mistakes made by average players?

Notice that the questions from the second set are more likely to come up as you reflect back on your play and are less likely to have clear answers. Waiting a moment too long to Retreat an infantry squad gives you the immediate feedback of losing your unit. Encountering difficulty while engaging a specific enemy unit, like the German Half-track, does not provide you with direct feedback as to what works and what doesn't. This section of the guide will assist you in choosing optimal actions when obvious ones do not exist.

Unit Control

Author: Ryan Ong

Capturing Weapons and Vehicles

Infantry Weapons

Standard [soldiers](#) spawned from their respective bases will often bring their weapons of the present time into battle. [Medics](#) will bring [Assault Rifles](#), [Engineers](#) will bring [Carbines](#), [Infiltrators](#) will bring [Sniper Rifles](#), and [Light Assaults](#) will bring [Submachine Guns](#).

Tip

Each weapon has a unique appearance and different strengths and weaknesses. Experiment and find a weapon that suits your playstyle. Each weapon can be upgraded with [Certs](#) to improve its performance.

Tip

Infantry weapons can be upgraded with [Certs](#) to improve their performance. Each weapon has a unique upgrade path. Experiment with different upgrades to find the one that suits your playstyle.

Tip

Each weapon has a unique appearance and different strengths and weaknesses. Experiment and find a weapon that suits your playstyle. Each weapon can be upgraded with [Certs](#) to improve its performance.

Team Weapons

Some [vehicles](#), [MAXes](#), and [AIT units](#) can also be operated as team weapons (additional seat) where [squad](#) members can hop in and help out. Team weapons can be identified by the presence of a gunner seat.

Tip

Team weapons can be operated by multiple players. This is a great way to get your squad members involved in the fight. Team weapons can be identified by the presence of a gunner seat. Some team weapons can be operated by multiple players, while others can only be operated by one player.

Tip

Team weapons can be operated by multiple players. This is a great way to get your squad members involved in the fight. Team weapons can be identified by the presence of a gunner seat. Some team weapons can be operated by multiple players, while others can only be operated by one player.

Vehicles

Standard [vehicles](#) spawned from the [Vehicle Terminal](#) will bring their own set of weapons and are meant to be operated by a single person in the driver seat. Some [vehicles](#), [AIT units](#), and [MAXes](#) can be used to deploy a weapon in addition to what is on your vehicle.

Tip

Vehicles can be upgraded with [Certs](#) to improve their performance. Each vehicle has a unique upgrade path. Experiment with different upgrades to find the one that suits your playstyle. Some vehicles can be upgraded with [Certs](#) to improve their performance. Each vehicle has a unique upgrade path. Experiment with different upgrades to find the one that suits your playsty

Tactics: Situational Analysis

Combat Situation Puzzles

Situation: A passive enemy force in defensive situations without many weapons teams or artillery.

Response: Set up weapon teams and artillery of your own to bombard the enemy and engage at long range. This minimizes your casualties, though it will take longer than other approaches.

Situation: An enemy Sniper keeps depleting my infantry squads and forcing me to Retreat.

Response: You can try to rush the Sniper with infantry squads and force it to Retreat, but this only works if your opponent doesn't support the Sniper with other units. The safest solutions are counter-sniping with your own Sniper, or using indirect fire (Mortars/artillery) and hoping for a good hit. A micro-intensive solution is a fast vehicle, like a Scout Car, Half-track, or light/medium tank, but this only works if your opponent doesn't have anti-vehicle weapons nearby or you micro well enough to avoid any danger.

Situation: An enemy Mortar is pounding my defensive position.

Response: Move away! If you absolutely must hold the area, simply move your units around every minute or so to a new position. The best solution is to prepare an ambush by laying mines and moving your units back just far enough so that your opponent believes you have abandoned the area, then counterattacking when he advances on the point. You can use your own Mortar or artillery to take out the enemy's, but this isn't entirely reliable. You can prepare an assault on the enemy position with mobile units like infantry squads or light or medium vehicles. A good opponent will expect this, so you need to draw his attention away from defending his fire support units. For example, push an enemy sector to give the sense that you're committing to an assault in that area of the map, this should draw away some portion of the defenders, then reposition your mobile force back to the original position in time to attack the Mortar or artillery. This is ideally done from multiple directions, or simply a single unexpected direction, so that your opponent's AT guns and HMGs are less likely to be positioned appropriately and his units are less likely to escape your attack.

Situation: Enemy took my cut-off and is defending it with multiple infantry and HMGs, possibly garrisoned.

Response: The novice player sends several infantry squads in a direct assault against the position, hoping to win, but usually is forced to Retreat. In the early game, Snipers and Mortars are the best options for forcing an enemy force to leave a specific location. Later on, you can use artillery and tanks to do this. A faster and more difficult solution is using grenades or units with flamethrowers during a multi-pronged infantry assault.

Situation: I have an Assault vehicle and my opponent has anti-vehicle weapons.

Response: There are two types of anti-vehicle weapons to worry about, those that do damage and those that disable. Panzerschrecks, Guards Rifle Infantry, AT guns, and tanks fit into the first category. Soviet AT grenades, German Panzerfausts, and mines from both factions fit into the second category. If I have an assault vehicle, I am more concerned about Category 2, as I can use the unit's speed to escape situations involving Category 1. If I have a heavy tank or fire support vehicle, Category 2 is annoying but the greater concern is the Category 1 weapons because they can quickly deal a large amount of damage if you don't destroy them or escape.

Situation: I'm behind in territory but I just acquired battlefield superiority (e.g., my T-34 doesn't have any counters on the field right now).

Response: Go to your opponent's cut-off points and decap them immediately. You need to push the frontline up as far as possible to restrict your opponent's resource income. When you already have a battlefield advantage in terms of available units, it's more important to ensure your opponent doesn't gain resources than to gain resources yourself.

Situation: I'm behind in battlefield superiority but I have more territory (e.g., the opponent has a vehicle that I can't counter yet).

Response: Spread out your units as much as possible and harass everywhere. Don't engage in major fights and retreat whenever your opponent's killer unit approaches your men. Your goal is to limit the effectiveness of your opponent's killer unit and refuse to give it juicy targets while you maintain your units until you have built the proper counter. Ideally, you'll keep your opponent's killer unit occupied on the flanks and maintain some resource income, but if he goes for your cut-off points (as I would advise him to do) then you need to deny him resources from the sectors close to his base. He can't be everywhere at once, so take advantage of this.

Situation: I have superior mobile forces; my opponent has a superior defensive force.

Response: Threaten multiple areas of the map simultaneously and force your opponent to split his forces. You do need to be sure that you contain his force by contesting the frontline area because you cannot let him advance his entire force to take your cutoff points.

Most Common Mistakes

- Selecting a group of units and giving them all an order. You want to be controlling one unit at a time as much as you possibly can.
- Sending in vehicles first and/or sending them in unsupported. What's better: Detonating a mine with an infantry squad or with a vehicle? You might say vehicle because it can be repaired for free, while infantry cost Manpower to reinforce, but you would be wrong. It's nearly always better to send in a squad of infantry first when you're moving into an area held by your opponent. Why? If an infantry squad gets into a bad situation, you can Retreat and, at worst, you'll have lost a small amount of Manpower. If a vehicle runs over a mine, gets a damaged engine, and your opponent begins attacking with anti-vehicle weapons, there's nothing you can do about it and no way to escape. What happens? You lose your entire vehicle. If this happens early, it can decide the game because your opponent's vehicles can then move around without worrying about yours.
- Failing to counterattack after enemy units Retreat. It can be tempting to use a lull in combat for reinforcing your infantry squads to full strength or healing them, often by Retreating to base. Do not do this immediately after winning a battle. First, move up and capture enemy points. If you cannot possibly reinforce or heal in the field using bunkers or Half-tracks, then you should Retreat infantry units and withdraw heavily damaged vehicles for repairs. However, it's best to maintain a small field presence to provide resistance when the enemy units return, buying your other units time to travel back to the front line, fully reinforced and healed, from your base.
- Greed in overextending. If you see an opportunity to seize ground, like after winning a major battle and forcing many enemy units to Retreat, it's a good idea to be very aggressive. However, when those enemy units reinforce and return to the new front line, you need to be sure that your units aren't spread out across the map capturing points. If necessary, fall back a little to allow enough time to regroup your units for battle.
- Being too passive and failing to scout the enemy's position and exploit vulnerabilities. If you have trouble playing aggressively, you probably aren't scouting enough. If you know where your opponent's units are, you can confidently attack undefended areas.
- Not Retreating when nothing is to be gained from fighting on and needlessly risking the destruction of your units. Realize when a battle is lost and consider how best to conserve your units. It's more important to keep your own veteran units alive than to destroy enemy units, unless they have even more veterancy. Err on the side of conservatism in unit preservation.
- As soon as squads are reinforced, sending them back into the fray instead of reflecting on whether to continue fighting in that area. If you just lost a major battle and your opponent is skillful, do not return to the same area to counterattack. It's likely to be well defended and fortified with mines. Instead, use the time it takes for your units to reinforce to consider where you could attack that would be unexpected and frustrating for your opponent.

On the Battlefield

On the Battlefield

Field Defenses

Field defenses primarily make use of a combination of terrain controlled by most players—then. Barbed wire and sandbags are fine to construct, so that's why low cost is the time it takes until is built them. Other field defenses, like mines, Mount Munitions, and the one may might be compared with artillery like grenades, but key differences remain.

- You can build field defenses when preparing for an attack, while artillery require your attention during a fight. You can defend an area of the map with a unit even when no members are there by placing field defenses that protect your units your unit moves elsewhere.
- Field defenses have no upkeep and an unlimited, meaning any unit need to worry about the cooldown time as you would with an artillery, or even decreased Incursion as you would with a unit.

Mines

German forces viewed minefields as a critical part of their defensive actions, and even made use of them to villainize actions as a means of protecting their forces from enemy attacks. —Combat Engineers and Mines

Mines can be used alongside other battlefield fortifications to increase their chance of causing damage. For example, to destroy a bridge, you could place mines on the bridge's supports, so that the next time your opponents try to cross the river, they're likely to try to take cover in nearby that spot and run into an unfortunate surprise.

It's also a good idea to place mines in locations where hidden behind terrain because your opponent will likely lead for infantry into a high track or Scout Car to get them through the barbed wire more easily.

Another fun thing to do with barbed wire is use it to funnel enemy infantry rather than block off an entire area. Leave a small gap in the barbed wire, and then place a few mines in that gap. Your opponent will see the gap and think it's a safe path to use, and is likely to think that the area is clear now. The next time this happens during the same game, do not build the mine but move a unit to the area to kill the inevitable maneuverer squad. You can do this a such after. Leave a gap in your wire but don't place any mines in it. Your opponent will think that you've already used the mines in the area. This allows you to control your opponent's movement with just the fear of mines, even though none are present.

> **Tip**
>
> Place mines next to the doors of buildings commonly used for garrisons.

When placing mines, it's usually a bad idea to place them directly adjacent to one another because if one triggers it will also detonate the others to the effect than if they were detonated independently. However, if you specifically desire to completely destroy a light vehicle with mines to avoid any repair opportunity, as Soviets you need to place two mines side by side such that the vehicle will activate both simultaneously. Likewise, to use a tire penetration on the vehicle's axels if you place just one mine, or place the tire parallel to the vehicle's path, you're likely to be using enough to engine before it receives away to repair.

> **Tip**
>
> Bait units to chase yours into mines. Snipers are especially good bait, as are Scout Cars when your opponent has tanks.

> **Tip**
>
> Place mines in sector capture zones on the side from which enemy units are most likely to approach. Cover in capture zones is especially valuable, so placing mines behind the best cover location is also a good idea. This type of mine placement can be especially effective in Soviet Conscript and Allied Rifleman squads, which have no cover bonus and occupation the sector. Normally you'd need to send two or more units to capture that sector and it's defeated. Some opponents may be so worried about the survival of their squad that they'll retreat immediately after detonating the mine to heal. Even if your opponent doesn't retreat, you'll have dealt damage to their squad that will be easier to finish off later, so this gives your mines a higher likelihood of causing damage.

> **Tip**
>
> When all else points are the most likely to be detonated and to be discovered by a minesweeper squad. It's ideal to use mines to defend a location that you're not planning to attack with units. For example, if you're playing as Soviets and you're covering the choke point you need to defend with mines, you'll be able to build your base in peace. The mines will be slowed long enough for machine guns to get and Mortars to strike accurately, and vehicles will generally acquire a damaged engine, making your life a lot more than if you'd just left them alone.

Look at the multiplayer map section to get a few ideas for mine placement.

> **Tip**
>
> When placing against Soviets, if you see Scout Cars, don't bother placing AT mines, as Panzerfausts are a less expensive way to destroy them. However, if you don't see Scout Cars, you should expect a T-70 or T-34 tank, in which case you'll definitely want to place AT mines to destroy it.

> **Caution**
>
> *Do not place your units too close to your own mines.* A stray Mortar, AT, or tank cannon shell can detonate the mine and cause massive damage to your unit.

Completing sets a portion of the unit personal minefield available to the Germans in an acceptable tactic – you will only be dropped based on the number of mines you've placed, not on the complete field of mines that it will set up with. Mounties rather than AT, the Pioneer squad will build the mine section closest to the unit first, so it is possible to only build a few mines and then move the unit away from the rest of the minefield. Just be sure to leave enough mines for the full squad. Otherwise, the Pioneers will run out of mines before they've placed them all, and they'll have to run back to the rest.

Terrain features like hedgerows, fences, and walls can be combined with the game to open up movement paths toward one of sight or deny cover to the enemy. Light vehicles can crush weak terrain, like wooden fences, you can set a mine and detonate it with a grenade, and you can also attach Ground with a flamethrower to burn down wooden fences. Remember infantry can look over them, but not weapon teams like MMGs and Mortars.

When fighting during the winter, build Campfires in low-sized areas of the map to facilitate unexpected flank attacks. Deploying the mines in the exposed build-building walls with Concrete squads to act as a "cover highway" during Skirmish because a unit's temperature does not drop while it is in cover.

You can place the Soviet Tesla Coil Defense in front of your defensive positions so that you know when to detonate them. This avoids the need to keep another unit of yours nearby to provide sight over the area.

Garrisoning Buildings

Units in buildings have increased survivability against everything but flamethrowers and grenades. It's especially useful to put units in buildings if they're under attack, or if they're about to be suppressed or pinned. Vehicles cannot crush units in buildings and they suppress every on by machine guns.

A Few Things to Know About Buildings

If the building's HP is reduced to zero, it will collapse, completely destroying any unit garrisoned within. Artillery and Mortars are both well suited to destroying buildings, so pay attention because your squad might be relatively undamaged even though the building itself is about to collapse.

Units in buildings must die to each of windows, holes in the walls, or from the roof. Some buildings have blind spots, meaning an area without a window or hole in the building. Units in buildings can't fire at units in the area of the blind spot in the building without two or more attack mortars. When selecting a building to garrison, be aware of any blind spots and how those might affect the tactical situation.

Company of Heroes 2's terrain deformation extends to buildings, meaning that units—the tanks and artillery can blow holes in the walls of buildings. Buildings with multiple floors can be destroyed by artillery, leaving only the ground floor standing. However, the building can be rebuilt. Although think about using Ground with a tank to intentionally create holes other removing your unit from the building of course, and then reoccupy it to use the holes you made as firing points.

> **Caution**
>
> A special note about Molotov cocktails: when these clothing buildings you may not notice any immediate graphical effect or damage, but the building is actually burning. Units in the building will take damage from the fire, and if the building's HP is reduced to zero, it will collapse, killing any units inside. Molotov's damage over time is very dangerous, largely thought by suddenly [you might go micro somewhere else, believing the unit to be safe].

The best units to place in buildings are MMGs, Snipers, and inventive infantry units like Grenadiers, Guards Rifle Infantry, and Flamethrowers with Pioneers.Rifle units that have strong long-range weapons and that may be susceptible to assault units and/or vehicles.

MMGs must still set up and then pack up every time moving from window to window, so keep this in mind if you come one to attack and isolate at least that MMG before it packs up.

Snipers can also assist in buildings, but they lose their ability to camouflage in exchange for increased survivability. Remember that some units snipers can detect camouflage, so it's still a threat to units like the German MG42 Gunners Infantry Section and Pioneers. Rounds. If you select the unit individually from the building—you can purchase weapon upgrades for a unit while it's garrisoned in the same manner.

When exiting buildings you can either click on the building itself and then click on the Leave Building button and select a destination for the unit, or you can simply click on the unit and then click on the area where the unit should go. It's a convenient order somewhere outside of the building.

Units within green spaces like bushes, there are often multiple doors to each building. As with windows, the location of these doors is important. If you order a unit to leave a building, it will use the door closest to the destination you select—you can't control which door the unit uses. Keep this in mind if you're trying to flank. If you're attacking a building and you want to make sure a unit exits from the side of the building, don't order the unit to go through the door on the front to a little while. If you want to Retreat a unit garrisoned in a building, order it to exit the rear closest to your base.

When ordering an MMG to set up building, be careful not to click directly outside of the building because it will immediately fire through the nearest window. Instead, click a little farther away from the building, and the MMG will move to the window and then fire.

The larger the building, the more difficult it is to destroy, so these are the ones you want to garrison, other things being equal. Also note that grenades generally do more damage against units in smaller buildings, because the squad members inside are packed more closely together.

The best buildings have fields of fire that cover multiple capture points, a single important point, or key movement routes.

If an MMG squad just barely loads one of your infantry squads into a building, not all is lost! You can do the circle "dance" with the MMG squad, ordering it to move around the building in a circle. Eventually, the MMG squad will move past the window and you'll be able to unload the infantry squad. It's a small window bonus that the loss's a viable way to actually kill the MMG, but you can use this technique to delay while researching Molotov or while waiting for the grenade ability to recharge.

Terrain

TrueSight

Watch the in-game "TrueSight" tutorial. Enemy units are briefly revealed in the fog of war when they fire at one of your units. Artillery units can reveal a large area of the battlefield. Take advantage of this by using artillery to reveal enemy units in the area exchange the through the fog of war to discover the location of the units revealed but by firing at a distant unit that is out on use. This is resurrected by the auto-attack unit ID, meaning that one of your units like a T-34 can attack an enemy unit, like a Pioneer squad, and in doing so reveal the location of the rest of the enemy squad. Remember that the Pioneer squad will get you the way to avoid this is to ordering a unit to Attack Ground, to ensure that it doesn't accidentally reveal itself by engaging enemies directly.

TrueSight Tips

- Take care not to grant your opponent sight of any more of your units than is necessary. For example, only send one unit to fire from a group of units. Your opponent will only see the one unit that fires and not the rest of the units in the area.
- Smoke can be used in several ways to obstruct your opponent's line of sight, which is further detailed in the Mortar Smoke section.

Terrain

Your opponent's view of the Ostwind after the smoke canisters deploy.

- Make your force seem larger than it is. To do this, decoy a point with an infantry squad (without revealing your full force) and then flank with the rest of your units. Your opponent will see the infantry squad and think that you've attacked a single point before moving on, so if he sees any decoying several points soon after each other, he's going to assume that you have several infantry squads in that area of the map.
- Make units appear to be a lot smaller than they are. Artillery, artillery, and AT guns are a few prime examples. To make the most of these units, use one of your other units to gain line of sight of the enemy, allowing your long-range units to fire from safety. Tanks are good to do this setting up, as they can be moved to conceal their weapons from the forward the enemy, with their fire on as threat prevents not revealed. When you use the Sniper as a caution, your opponent won't be expecting accurate Mortar and artillery fire from your AT units.

Winter Tips

- Use light vehicles in the early game to crush Campfires on your opponent's side of the map. This will threaten his units with freezing during blizzards.
- If you have lots of AT guns, artillery, you might target-based buildings with the intent of denying your opponent use of them.
- Create cover-up using Attack Ground with Mortars, artillery, tanks, or grenades to avoid the effects of cold temperature in areas with no natural cover.

Use Attack Ground and target the ice beneath enemy tanks. Normal attacks targeting tanks will sometimes cause the ice to collapse as well.

> **Tip**
>
> The Soviet Incendiary Artillery commander ability and the German Mortar Half-track's Incendiary Barrage are both extremely useful against enemy vehicles sneaking across.

- Vehicles can provide cover to infantry, which is useful in open-field fights and especially useful during blizzards, as infantry squad temperature stabilizes while they're in cover. This means a bulletin unit like a Combat Engineer or Pioneer squad can use cover during blizzards without suffering any hypothermia casualties.
- Heavy weapons like tank cannons, artillery, and Mortars can break holes in the ice, causing units to fall into the freezing water and perish, as well as making the area impassable for other units.

Use Attack Ground and target the ice beneath enemy tanks. Normal attacks targeting tanks will sometimes cause the ice to collapse as well.

Infantry moving through deep snow during blizzards gets camouflage. Note that this Conscript squad managed to acquire a decent Panzerfaust.

- Want to know if there's a squad hiding in deep snow or behind a camouflage net? Snipers can detect this and fire at any tracks. This can tell you whether to expect a Sniper or a Conscript squad. Infantry or vehicles. Note that tracks are covered over during blizzards.

Panzerfausts left behind by a grenadier squad moving through deep snow.

Sound Effects

You can listen to unit sound effects through the fog of war to get advanced warning about your opponents units and intentions. For example, you may hear the rumble of a heavy tank, the engine of a light vehicle, the shot of a Sniper, the thwack of a Mortar firing, or the roar of a Howitzer. You can also hear Infantry, to some extent.

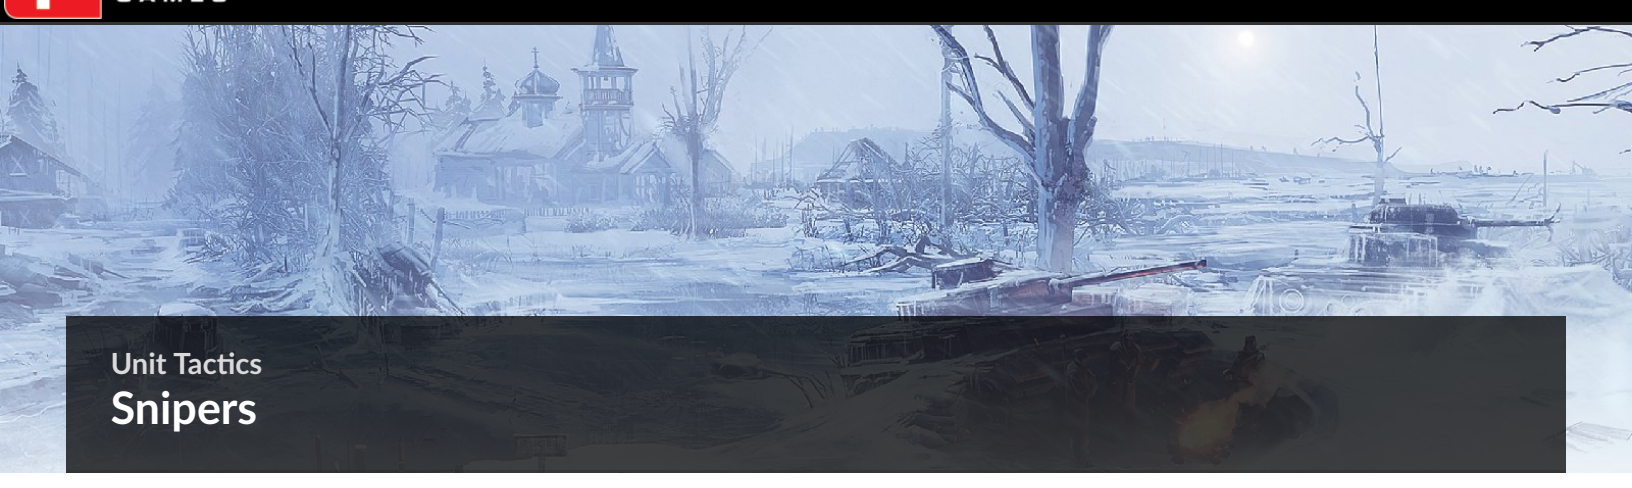

Production Buildings

Place production buildings next to the edge of the base, so you can reinforce squad members while soldiering between your HQ and the building, allowing several squads will reconfirm each to the front line. Spread up construction of buildings using multiple builders (Combat Engineer or Pioneer squad).

Resource Expenditure

In RTS games, it's a bad idea to stockpile resources unless you're saving to purchase a specific unit. It's better to have units on the field than resources in the bank. Resources Are to Compare of Heroes 2's combat resources are like pieces in chess, in which Maneuver income decreases or once population increased. It's advantageous to keep your population cap or be on you can always reinforcing battlefield advantage.

One effect of upkeep functioning is this way is that battlefield fortifications and resource caches become far more powerful. For example, you might think that a 200 Manpower Pak 40 gun is equivalent to a 200 Manpower unit, but the unit will reduce your Manpower income over the course of the game whereas the Pak Cache will not meaning that units have Soldier Experience and Veterancy while the cache is a fixed investment. Similarly, a Sniper unit costs 240 Manpower, but it's only 150 Manpower and 60 munitions with the second. 1.90 Manpower because it's cheaper. In the early game the MG42 is a better choice due to its lack of Munitions cost, but in mid-game and in the late game, you'll want to build MG bunkers to lock down areas rather than mere MG42s.

Unit Tactics

Snipers

General Sniper Use

In many games, cloaking is an activated ability, and this is how Snipers in Company of Heroes functioned. In Company of Heroes 2, Snipers have camouflage that grants them invisibility when near cover and for a few seconds in open terrain immediately after leaving cover. This can be used to roam around the map secretly, so long as you move from cover to cover.

Note

Firing makes a Sniper visible for a couple of seconds. Be sure to use the Hold Fire command when you want your Sniper to remain hidden while in range to attack enemy units—when scouting or spotting for artillery, for example.

Snipers in Company of Heroes 2 do not suffer negative effects from blizzards; they can operate away from fires in a manner unlike any other infantry unit. Areas with large amounts of deep snow are especially good locations for Snipers, as closer proximity to enemy units is required before they're noticed, and units that would seek to charge at a Sniper or chase one down will have their speed impeded by the deep snow.

Garrisoning Snipers in buildings can work very well to extend their line of sight and protect them against enemy attacks, but it removes their ability to move around secretly and surprise enemy units when attacking—Snipers in buildings are prime targets for Mortars and artillery.

Note

In contrast to Company of Heroes, Snipers now are only mediocre at clearing units that are garrisoned in buildings—I recommend only engaging if the Sniper can attack from outside the target unit's range.

As point capture in Company of Heroes 2 is done through standing in the capture radius, it's possible for a Sniper to do this while remaining invisible behind cover. Your opponent will still notice that the sector is being captured, but he won't necessarily know where your Sniper is. You can use the same technique to delay an opponent who is attempting to capture one of your points but doesn't realize that you have a hidden Sniper nearby.

Snipers are of little use against vehicles, but they can snipe infantry units riding in the back of open-top vehicles (Soviet M3A1 Scout Car and M5 Half-track)—this is a rather dangerous way to give away your position and invite the light vehicle to chase you down, so I recommend using Hold Fire or immediately Retreating if a light vehicle comes anywhere near a Sniper of yours unless you have an anti-tank unit nearby. If you want a Sniper to attack units inside of a vehicle, it's best to use the Attack Move command rather than right-clicking the vehicle to target it, as the latter command will result in the Sniper firing on the vehicle itself rather than on the men inside.

Tip

Be especially careful when Retreating Snipers, as they're quite easy to pick off while running away—it may sometimes be better to remain hidden and hope that you aren't found than to Retreat and hope that you get away safely.

The Soviets can place Snipers in their own open-top vehicles and use them in a manner similar to a mobile garrisoned building—the Sniper gains defensive bonuses and mobility, but it gives up its invisibility. Be sure to stop the vehicle carrying the Sniper before it shoots as moving causes a significant accuracy reduction. Placing your Soviet Snipers in an M3A1 is especially useful in avoiding stray artillery and Mortar shots, and getting away from charging infantry without needing to Retreat to base.

The ideal targets for a Sniper are team weapons like HMGs, Mortars, and AT guns, enemy Snipers, and infantry squads with few remaining members. AT guns and Mortars require two men to fire, so if you reduce such a unit to one man he will abandon his weapon and run off the map alone—this makes Soviet Snipers particularly deadly against the three-man German team weapons.

In comparing the German Sniper to the Soviet Sniper squad, several differences emerge. One, the German Sniper has an extended cloak time, so he can more easily move from cover to cover. Two, the German Sniper cloaks more quickly after taking a shot. Three, the German Sniper has a higher rate of fire. And four, the Soviet Sniper squad has an extra squad member meaning its survivability, especially in Sniper duels, is higher.

Tip

When using Snipers in the field, place mines in locations near them so that you can soft retreat back over the mine and cause attacking units to detonate it. This is especially useful against light vehicles like Scout Cars.

Support your Snipers with HMGs to guard against multiple infantry squads rushing you.

Counter-Sniping

Snipers are often used to counter enemy Snipers as a one-hit kill shot is very useful when your target only has one or two men and is high value. This creates the interesting situation of what to do with your own Sniper if you know that an enemy Sniper is in the vicinity.

Should you continue to attack enemy units normally and hope that your opponent does the same? A competent player will have his Sniper on Hold Fire and wait for yours to reveal itself before counter-sniping, so this is a bad idea.

Should you keep your Sniper on Hold Fire and wait for your opponent to reveal his Sniper? Again, if your opponent is competent he'll likely be doing the same thing.

The result is a stalemate in which the two Snipers cancel each other out—neither can act for fear of retribution from the other.

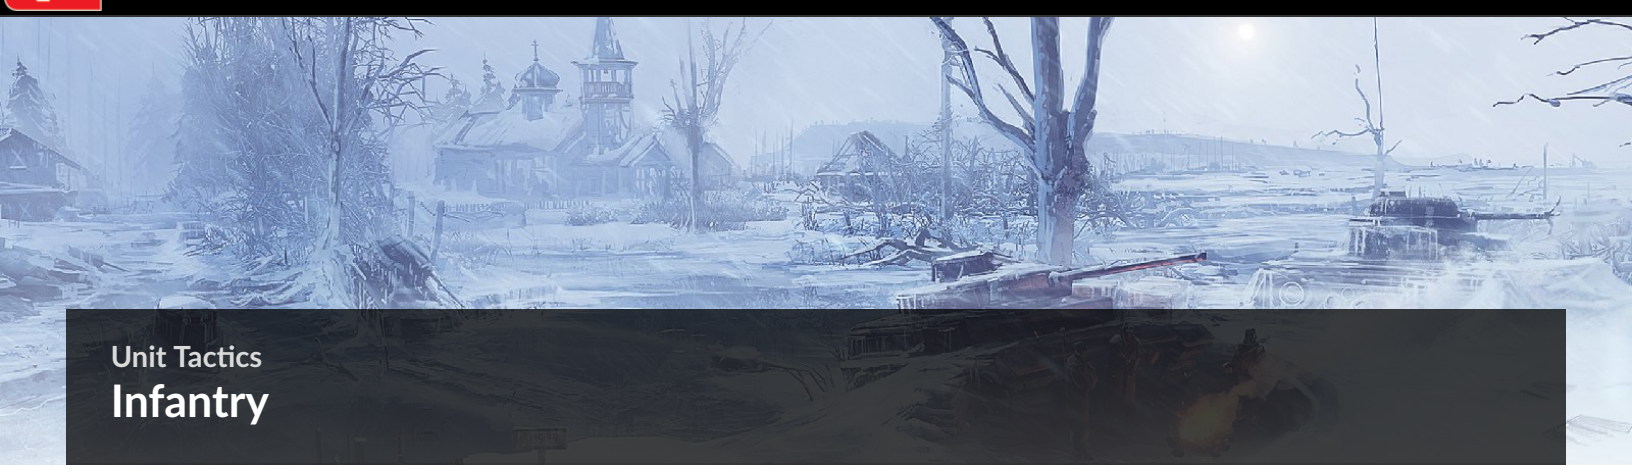

- If your opponent doesn't know that you have a Sniper, or believes it to be elsewhere, you should wait for the counter-snipe as this is the highest value option.
- If your opponent is aware of the existence and location of your Sniper, you either need to take steps to safely engage his units while mitigating the risk of a counter-snipe, or you need to take this opportunity to reposition to a different area of the battlefield—until you begin firing elsewhere, your opponent will believe your Sniper to still be in its original location on Hold-Fire waiting for a counter-snipe.

How to Counter-Snipe

- The obvious way is to place your Sniper in its own control group, camouflage in cover, turn on Hold Fire, wait for the enemy Sniper to reveal itself, and then select your Sniper and order it to fire at the enemy Sniper
- A faster option is to place your Sniper in cover, turn on Hold Fire, wait for the enemy Sniper to reveal itself, then select your Sniper and turn off Hold Fire. Your Sniper might decide to take a shot at a different unit for some reason, but if the enemy Sniper is the only possible target in range, this is the simplest way to ensure that your Sniper will shoot before the enemy's can camouflage again or withdraw.
- If your Sniper is moving when an enemy Sniper reveals itself, select your Sniper and give it an Attack Move order immediately. This is the fastest way to get it to fire as you won't need to move your cursor to target the enemy.

How to Avoid a Counter-Snipe

- Remain at the longest possible range to your target, and keep your target between your Sniper and your opponent's Sniper—this will allow you to score kills safely.
- After firing, move directly away from the likely location of the enemy Sniper to hopefully move out of range of a counter-snipe until your camouflage reactivates.
- Constantly vary your location from shot to shot so that your opponent cannot be sure of your location. This pertains to keeping your Sniper alive in general and not only to avoid being counter-sniped, as Mortars and artillery are certain to target it if it remains in one spot.
- Try to take shots from a location adjacent to a line of sight-blocking object, like a tall wall or building. After firing, move to safety behind the object.
- While it's ideal to finish destroying a weakened unit or focus fire on one unit to force it to Retreat, doing so allows your opponent to predict where your Sniper is likely to be. It's okay to wait longer between shots and to switch targets continuously to throw off your opponent. Preserving your Sniper is the most important thing—any kills you manage to get are a luxury.

Unit Tactics

Infantry

If an infantryman could survive his first few weeks on the battlefield, he could generally be relied upon to avoid doing anything stupid. Being unlucky was another matter, but recognizing when to duck no doubt helped his chances.

In infantry skirmishes, especially in the early game, the most important thing is to get into a good cover position and stop moving. Moving decreases a unit's accuracy and should only be done to dodge grenades, to reach heavier cover, or to engage at closer range if your unit has weapons suited for that (for example, flamethrowers or submachine guns on assault squads).

Combat Engineers vs. Pioneers

Combat Engineers tend to win early-game one-on-one fights against Pioneers, so do your best to avoid these when playing as Germans. However, the advantage of fighting from cover can tip the balance in your favor. Conversely, as Soviets, you ought to try to push away Pioneers when you're capping, but be careful not to get into a situation that forces you to Retreat one of your first few squads, as this denies you capping power at a critical point in the game.

Anti-tank Infantry

German infantry anti-tank training stressed aggressive action in engaging enemy tanks. A variety of weapons, both standard and field-modified were used, including anti-tank guns of all calibers, Panzerfausts and Panzerschrecks, mines, Molotovs, pole charges, and grenades of several types. Smoke or anti-tank trenches were often employed to allow infantry to close with an enemy tank and destroy it.

Learn the reload times of heavy tanks (for example, 11 seconds for the Brummbar) and try to spread out your squad by moving or getting behind heavy cover when they're about to fire. Your weapons have higher accuracy at close range, but take care not to get close enough to be crushed. Jump into a building or retreat if a fast tank rushes in to crush your squad. Against slower tanks, the infantry AI's natural evasive maneuvers are sufficient to avoid being crushed, but be sure not to give the squad any movement orders as these counteract their evasive tendencies. Learn the reload times of your own anti-tank weapons. Move after firing to get into a better position, like behind the target vehicle or into cover, but stop moving in time to shoot again as no infantry anti-tank weapons can fire while moving.

Do not chase tanks and light vehicles unless your target is literally one hit away from destruction. Your squad is not fast enough to catch anything except vehicles with damaged engines, and you need to be careful not to run into a trap, like an MG. Think of Panzerschrecks as anti-vehicle weapons used to deter enemy attacks, and to support your AT guns and vehicles in fights, not as a counter to vehicles by themselves.

Healing Infantry

Veteran infantrymen had sometimes served in frontline combat for years, eventually learning when to temper aggressive action, when to give in to caution, how to avoid panic, and what it's like to gauge the feel of a battlefield and take stock of his enemy.

German Healing Bunker and Soviet HQ Healing upgrades provide medics that heal nearby members of infantry units. Each individual soldier in Company of Heroes 2 has associated HP, so you can often be in the situation of having a fully reinforced squad that may only have 60 percent HP. Each faction has a building upgrade that addresses this situation, and both are wonderful investments in reducing your reinforcement costs and increasing the longevity of your infantry squads.

Reinforcement on the Field

Half-tracks and German Command Bunkers are the two ways to reinforce units without returning them to your base, and these are invaluable units to have in support of an infantry force. For example, your entire army might consist of four infantry units while your opponent has eight infantry units, but if you consistently force him to Retreat units to reinforce while yours remain in the field continuously, you are able to operate to maintain an equivalent battlefield strength with a significantly lower resource investment.

Casualties

Sometimes when a member of an infantry squad is killed, it will remain on the battlefield for a limited time in a "severely wounded" animation. Enemy men provide line of sight to your opponent, so be careful moving squads by them if you're trying to sneak by or don't want to be spotted by artillery. They can also be interrogated by German infantry squads with the Jaeger Infantry Commander's G43 upgrade to reveal the positions of nearby infantry squads on the minimap.

Conscripts

One of the best uses of Conscripts in the early game is rushing directly to a high-value sector, usually a Fuel Point or an opponent's cut-off, and then building a sandbag wall. Because Conscripts can be built using the HQ while Grenadiers and MGs require the Tier 1 building, the first Conscript squad will always beat anything other than a Pioneer squad to any sector. Pioneers can't effectively fight Conscripts, so make use of this early advantage. This is especially useful in areas without much natural cover so that the Ostheer units must fight without cover or run directly up to the sandbags themselves. Against a German player using the Tier 2 start, prepare to fight Panzergrenadiers by building multiple sandbags walls and placing Conscripts behind them—in this situation, Conscripts will actually beat equal numbers of Panzergrenadiers, without accounting for the use of bundled grenades or Molotovs.

If you're about to retreat a Conscript squad that isn't in severe danger, see if you can merge some of its squad members with a nearby infantry squad. You never want to lose an entire squad by merging, but if you have two units of four Conscripts in the field, it's better to merge and Retreat two men than not merge and Retreat four men.

When fighting Grenadiers, get close and into cover. Against a squad with an LMG standing in cover, your only hope of winning is a good Molotov, otherwise you're better off leaving and harassing somewhere else. Against Panzergrenadiers without Panzerschrecks, Conscripts have a decent chance if they're stationary and in heavy cover while the Panzergrenadiers charge (especially across negative cover, like a road). In any other situation, the Conscripts will be destroyed unless they outnumber the Panzergrenadiers two squads to one, or more. Grenades change the balance, but the Bundled Grenade is superior to the Molotov, so be careful not to be hit by it. If the Panzergrenadiers have Panzerschrecks, the same ideas apply, but you don't need to worry about being charged as much—just get into cover, watch for grenades, and try to get a numerical advantage. Against Pioneers just charge straight in and you'll win handily, unless they have a Flamethrower. In that case, treat them like Panzergrenadiers who are a bit less tough and lack grenades—definitely do not charge them and try to force them to charge across open ground to engage you. Focus firing Flamethrower Pioneers with multiple Conscript squads is a very good idea in battles involving multiple units.

Mobile Infantry

When you have a more mobile force, like a Conscript-heavy army facing a mixed group of HMGs and Grenadiers, don't try to fight battles head on. Simply avoid the weapon teams and force your opponent to come to you. How? Get behind his lines and start harassing his sectors. Eventually, he'll abandon his front line to deal with his rear, allowing you the opportunity to recapture that area of the map.

Elite Infantry

Extra military training paid off in a number of ways; infantry were more comfortable with their roles on the battlefield, weapon use became second nature, and camaraderie was improved through more effective training exercises.

Unit Tactics
Vehicles

After World War II, the great variety of armored fighting vehicles—light tanks, medium tanks, heavy tanks, tank-destroyers, assault guns, self-propelled guns—disappeared in favor of the multirole main battle tank. But in World War II, it was the medium tank and its derivatives based on the chassis of the T-34, Panzer III/IV, and M4 Sherman that made up the bulk of production and bore the brunt of combat.

Vehicles have front and rear armor, with rear armor typically half as strong as front armor. Flank armor doesn't exist, so half of each flank is categorized as front and half as rear. Always try to target rear armor, especially when you have a mobile unit like a medium tank with a turret or an infantry squad with an anti-tank weapon. When using vehicles yourself, be sure to keep your front armor facing your opponent's anti-tank weapons—if you hold the right mouse button down you can order a unit to alter its facing, which is especially useful in these circumstances.

Experienced drivers were able to pick lines through terrain that would maximize their speed and minimize their exposure to enemy fire. Speed is one thing, arriving at the intended destination was more important.

Vehicles can crush some terrain features like trees, fences, and sandbags. Larger vehicles can crush larger objects (for example, heavy tanks can knock over hedgerows and tall walls). Tanks can also crush infantry. Infantry will naturally attempt to avoid being crushed if they do not have any other orders, but if you give an infantry squad a movement order that intersects the path of a moving tank, your men will likely meet their doom under the oncoming treads. Retreating units cannot be crushed, so if an infantry squad is in danger of being crushed, Retreat them. When microing a tank to crush infantry, it's best to move back and forth as much as possible over the path of the infantry squad—use the Reverse button (hotkey R) to assist with this.

Tip

In combined arms engagements, use your vehicles as cover for your infantry. This is especially useful with Half-tracks, as your infantry can also reinforce immediately upon taking casualties.

Tanks and Turrets

Veteran German tank crews probably had dozens of battlefield encounters, often in the same tank, under their belts, whereas their Soviet counterparts might have had a dozen tanks shot out from under them. Both experiences taught valuable lessons.

You might perceive the T-34 and T-70 to be far less effective for their cost than the StuG, SU-76, or SU-85. It depends a great deal on how you use them. Tanks with turrets have the wonderful advantage of circle strafing. Vehicles that lack turrets (such as the SU-76, SU-85, and StuG) often run into trouble against tanks with turrets because they must turn their entire chassis to fire. To speed up their turn speed, you can give the unit a movement order in the opposite direction of the target vehicle's intended movement path. For example, against a T-34 approaching from the front-left side of a StuG and intending to flank around its left side, give the StuG a reverse order to its back-right—this will cause the StuG to rotate as normal while also keeping a greater distance between the two tanks so that it won't need to rotate as far during subsequent shots against the oncoming T-34.

Turrets can only rotate so quickly, and sometimes it's not fast enough if a vehicle is driving past your tank or enemy infantry begin Retreating. To decrease the time it takes for your cannon to line up with its target, hold down the right mouse button and order the tank to rotate in the direction your turret is moving—this combines your tank's movement with its turret rotation.

The Heavies

At the respective pinnacles of armored development for the Germans and Soviets were the Tiger (and later Tiger IIs) and the IS-2, named after Joseph Stalin himself. These tanks illustrated diverse approaches to design: Main armament differed dramatically, as did the quality of production, crew protection, and design complexity. IS-2s were almost comically menacing, Tigers massive and foreboding.

The Tiger and IS-2 are the super heavy tanks of Company of Heroes 2 and the ultimate assault units. No single unit can hope to win against them, forcing your opponent to consider a combined arms approach rather than build a simple hard counter. These tanks work best when spearheading assaults against lightly defended territory, or when striking out from the flanks at heavily defended positions. While they have the armor and HP to engage a defensive force frontally for a little while, they cannot hope to win, and this use of them doesn't justify their cost. It is viable to put slight pressure through frontal advances, then Retreat to repair after taking out a weak target, assuming your Tiger isn't disabled by a T-34, or your IS-2 by a Panzerfaust.

Tip

To counter heavy tanks, attack with multiple units simultaneously. Do not send units in one at a time unless you wish to lose them all.

The ISU-152 is a massive Howitzer on treads and the Elefant is the most lethal tank destroyer in the game. They cost massive amounts of Fuel, equivalent to the Tiger and IS-2, but they lose handily to the heavy tanks in single combat. What's the solution? The ISU-152 and Elefant have a range of almost two screen lengths, far exceeding any other non-Mortar or artillery unit in the game. As Soviets, use mines and AT grenades to damage the engines of enemy tanks while your ISU-152s safely engage outside of the enemy tank's range—Germans can do the same with Panzerfausts. These are the ultimate fire support units, use them as such and don't be surprised if they fail in the role of an assault unit.

Tip

Vehicles with lengthy reload times, like the Brummbar and ISU-152, can use these periods to reposition for their next shot. Don't worry about facing your target every second, it only matters that you do when the reload process is complete. Still, be careful not to expose your vehicle's weaker rear armor to enemy attack. It's also often a good idea to stop moving right before firing so that you don't incur an accuracy penalty.

The Elefant and ISU-152 have such extreme range that you'll need to tilt your camera if you want to watch them engage targets over a screen-length away. Here, an Elefant outranges and destroys an SU-85 Medium Tank Destroyer, itself a long-range anti-tank vehicle.

Tip

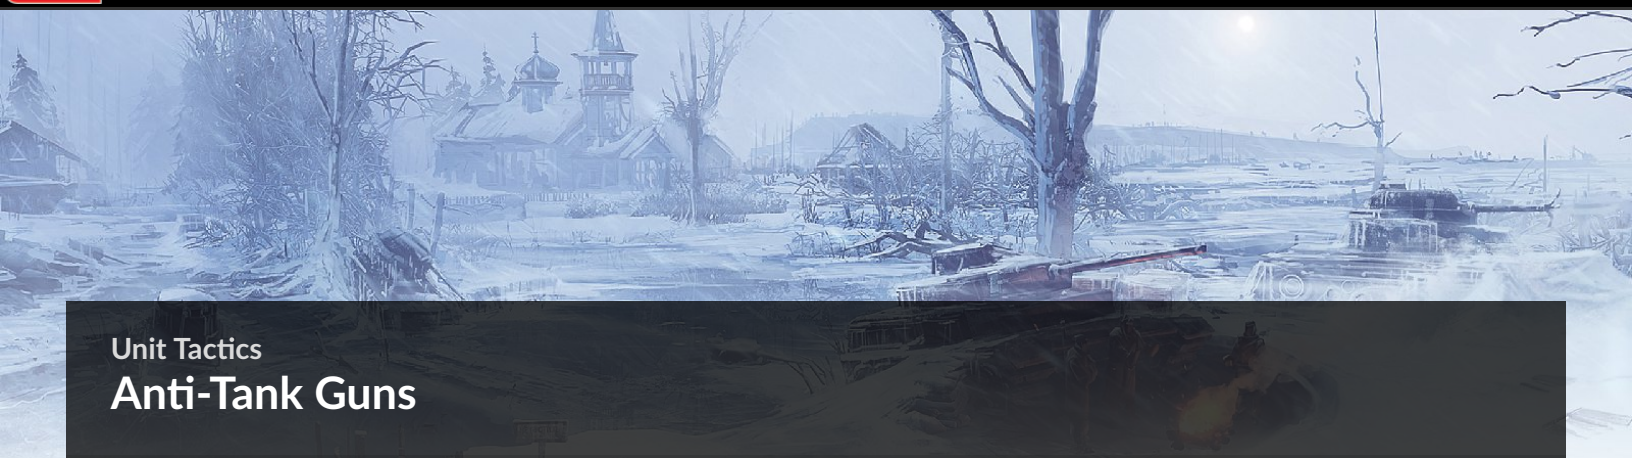

To counter light vehicles, damage their engines as soon as possible, otherwise they will escape.

Note

With the upgraded cannon, the German Scout Car can handily beat any other light vehicle, as well as do good damage to everything up to heavy tanks. A Scout Car won't be able to beat a T-34 alone, but your StuG will have difficulty chasing down a fleeing T-34—and the Scout Car excels in this role. Also, see the unit blocking advice because the Scout Car is well suited for this against vehicles.

Light vehicles are useful for harassing your opponent's points if you place an infantry squad inside. There are no "half-track aces" comparable to famous tank commanders in the historical accounts of World War II. Support vehicles rarely receive the recognition they might deserve, but consider that many hundreds of thousands of soldiers were shepherded alive across the violent battlefields of the Eastern Front.

Unit Tactics

Anti-Tank Guns

World War II anti-tank guns could often score a 95 percent accuracy on a one-meter-square target at 800m. Accuracy was important, but round selection and target acquisition were required before a shot was ever fired.

The key to using AT guns effectively is to consider how their firing arcs cover the expected paths of advancing vehicles, and how many shots they'll be able to fire before the vehicle passes through the arc while rushing forward.

Even under battlefield conditions, their flat trajectory and high velocity rounds plus good optics made AT guns often the equivalent of super heavy sniper rifles. AT guns with well-trained crews couldn't merely hit tanks at long range, they could hit specific weaknesses on their targets.

Ideal AT gun placement means an enemy vehicle will always be in the arc of fire of at least one, allowing you to turn other AT guns to shoot at the vehicle's flanks and rear if it charges any single AT gun you control. Using AT guns to support one another is critical in fighting against enemy heavy tanks that have sufficient armor to attack an AT gun from the front and shrug off several shots. Don't keep the AT guns bunched up, though, otherwise enemy vehicles will have an easier time avoiding the area entirely or bombarding it with artillery. Your AT guns just need line of sight of one another, and should otherwise be placed in a configuration that resembles a triangle such that they can cover each other's flanks and independently cover areas farther away.

Unit Tactics

Mortars

Mortars were generally the only "organic" indirect fire available to rifle regiments and were usually manned by the infantry as opposed to artillerymen. Dedicated heavy weapon sections and their officers were commanded with the tasks of siting the weapons for local attack or defense. These heavy weapon sections delivered a lot of the available firepower of an attacking rifle company.

Both German and Soviet Armies made extensive use of medium and large mortars and their crews needed to immerse themselves in the artillery command systems that managed their deployment and target selection.

As the weapon team tutorial teaches you, Mortars work well when paired with HMGs to do damage to suppressed or pinned units. Mortars have more uses than this, though! If your opponent has an HMG in a troublesome position, fire a smoke barrage in front of the HMG and charge it with infantry—you'll be able to run past and flank the HMG before it can attack your squad.

Do you have a damaged vehicle attempting to limp away while an AT gun fires at it? Fire a smoke barrage somewhere between the vehicle and the AT gun to stop the attack.

Is your opponent harassing a nearby sector? Use the standard barrage ability and hopefully force the infantry squad to Retreat.

Did you opponent place an HMG in a building? Hammer the building with steady fire until the HMG leaves or the building is completely destroyed.

High-value targets for mortars—in either attack or defense—included emplaced team weapons like machine guns and other mortars. Denying mortar coverage to the enemy could mean the difference between victory and defeat, and the forces that could silence their opponents' supporting weapons first were almost assured a victory.

Is there a blizzard? Aim a barrage at nearby Campfires in sectors controlled by your enemy—there are likely units clumped near the fire, and destroying the Campfires is useful in itself.

Mortars are highly effective against light vehicles like Scout Cars and Half-tracks, assuming they stay still long enough to be hit. If you throw an AT grenade with a Conscript squad or fire a Panzerfaust with a Grenadier squad, you'll invariably damage the target vehicle's engine. You can follow this up with a Mortar barrage just behind the vehicle so that it will slowly drive through as it attempts to get away. It's also a good idea to use the Mortar against vehicles being repaired by Engineers or Pioneers, as your opponent is less likely to dodge the shots, and even just forcing the repairing unit to Retreat is a victory.

Mortars were not intended to be high-accuracy weapons, instead they relied on rate of fire and mass to deliver large amounts of fire relatively quickly. But a well-trained mortar crew could be accurate enough—or lucky enough—to drop mortar rounds onto targets as small as an enemy vehicle.

Mortars are a force multiplier, but unlike most fire support units, Mortars can turn the tide in fights at multiple areas around the map at once. A well-placed Mortar will have several sectors within its range and it can immediately begin dropping shells onto enemy units without needing to move into position like every other unit.

Mortars were very good at attacking static or slow-moving targets, like infantry. Advancing infantry move at relatively predictable rates and bursts of speed cannot be maintained for very long. Infantry also have few places to hide; the mortars' high angle trajectory is able to plunge down behind cover, or if the soldier in question is particularly unlucky, score a direct hit into a foxhole.

Mortar Placement

- Bad = in the open on the front line.
- Good = Behind the front line with intervening impassable terrain and/or buildings.
- Excellent = In cover to avoid freezing, with battlefield fortifications covering attack paths, and spotter units up front. Coverage of multiple key locations like Victory Points and enemy fortified positions.

This position is terrible. There is no cover so the Mortar team will freeze in the cold over time. It's in the open and vulnerable to attacks by all unit types. The only positive aspect of its position is that it's behind the front line, but its firing radius has limited coverage of key points.

This position is decent. There is still no cover, so building a Campfire with another unit will be necessary. Its line of sight is blocked by the building just in front of it which means that enemy units must either flank it or use indirect fire—susceptibility to snipers is lessened. While it's still near the Fuel Point, it's also closer to the central victory point and so can provide fire support at both locations.

This position is excellent. Its line of sight is substantially blocked in all directions, meaning that an enemy unit would have to be standing right on top of it to attack, or indirect fire would be necessary, and light cover provides protection from the cold. Its location enables it to provide fire support to both the left and central Victory Points, as well as fire upon enemies advancing to the Fuel Point. This is a rather aggressive position unless you have a firm hold on the Fuel Point because it's quite distant from your base, but with an HMG in a nearby building and the front line established a bit farther away, a Mortar team here will be a major pain for your opponent.

This position is good. The trees force enemy units to put themselves into vulnerable positions to reach this Mortar. While there is no cover or Campfire, the Mortar is very close to the base so it can Retreat to avoid freezing. If your side is under a lot of pressure, a conservative Mortar location like this one is great in providing fire support while you try to regain map control.

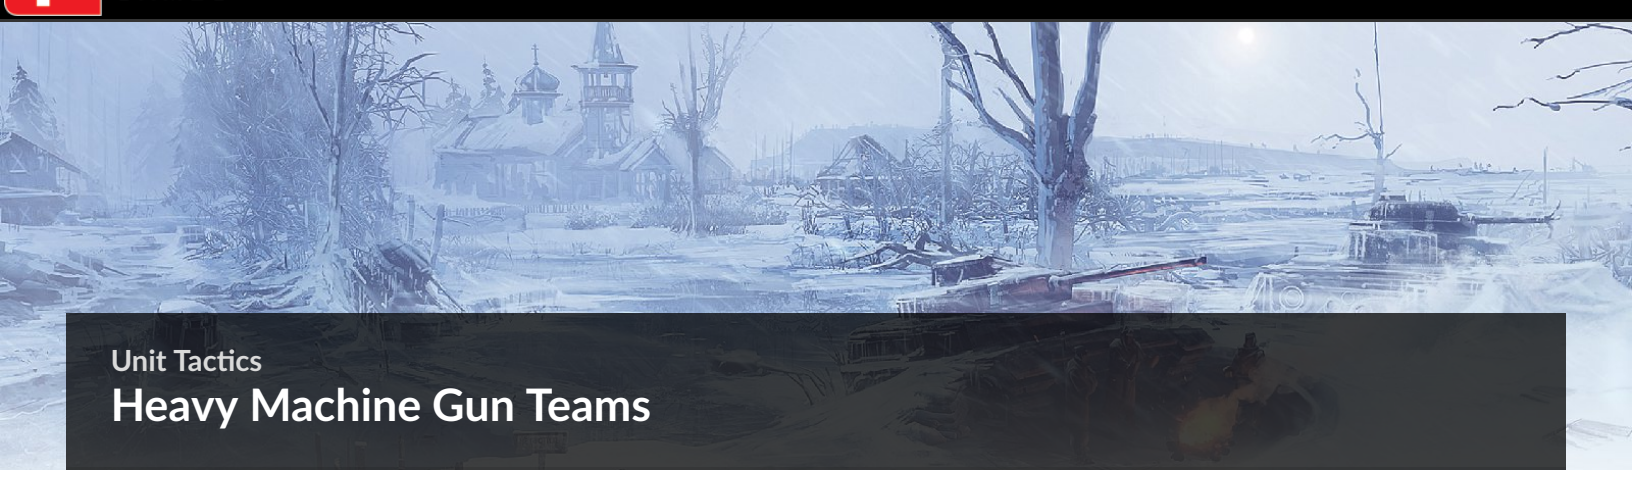

Mortar Smoke

This is a powerful ability due to TrueSight, far more so than Smoke Barrage in Company of Heroes 1. Why? I'll explain through a few potential uses:

- Fire smoke at an enemy HMG or AT gun to obscure its vision while you directly attack it with infantry or vehicles.
- Fire smoke at one of your damaged vehicles to aid in its escape.
- Fire smoke at a suppressed or pinned infantry squad to remove those conditions.
- Fire smoke between cover locations to allow your Sniper to get into a better position safely.
- Fire smoke at a building entrance to allow your HMG to garrison it without nearby enemies noticing your approach. Fire smoke just behind one of your vehicles engaged with another vehicle to allow Pioneers or Engineers to repair without being targeted.
- Fire smoke at a point to allow decap and capture without being pinned by an HMG or damaged by other nearby enemies.
- Fire smoke to conceal your Pioneers or Engineers who are laying mines.

As you may notice, many of these uses relate to protecting a unit that your opponent is aware of, but many others attempt to engage in information warfare. Once players become more accustomed to using smoke barrage in this fashion, yet another use for it will emerge: Fire smoke at a location for no reason whatsoever apart from making your opponent believe you're doing something there. Perhaps he'll think you're repositioning a weapon team or Sniper, laying a mine, or readying an assault.

The Soviet Army learned from their mistakes during the disastrous losses of 1941–42, and commanders and frontline forces were gradually honed into an effective fighting force. While the army was basically rebuilt almost three times in the first 18 months of the war, later losses were lower in comparison, and these veteran troops became the core of the army that would later take Berlin.

Unit Tactics

Heavy Machine Gun Teams

Machine guns are designed to do two things: kill enemy forces, and suppress enemy forces so they can be more readily killed. Establishing fire superiority is key—by forcing the enemy down, your own forces can engage them. In a defensive position, machine guns can rapidly fill the battlefield with very discouraging amounts of highly lethal jacketed lead.

You might think that an HMG is a defensive unit that you should use to cover an important area and leave there all through the game, but they're actually most powerful when they're constantly moving. Consider a Pioneer squad capturing sectors by itself. What happens if anything engages it? You are forced to Retreat. Now, what if you have an HMG always moving up behind your Pioneer squad along a flank? Your Pioneer squad can beat three Conscripts by itself if you lead them into the HMG's firing range and suppress them all.

Tip

If you force a squad of enemy infantry to Retreat using your HMG and don't see any nearby enemies, this is the perfect time to advance if you have other units for support, or to change your HMG's position if you don't.

More experienced machine gun crews had a strong understanding of their weapon's "tactical competencies" and were able to site their weapon effectively in defensive and offensive operations so they could protect themselves and engage targets on the battlefield effectively.

What are the best ways to counter an HMG? Remember this: avoid, flank, Mortar, Sniper, vehicle. Constantly moving your HMG allows you to mitigate the first three counters (avoid, flank, and Mortar)to a large extent, constraining your opponent's options a great deal. You want your opponent to feel like your HMG could be anywhere, and to fear moving his infantry into your territory because your HMG could be anywhere. As HMGs are vulnerable while moving, it's important to scout ahead with another unit so that you have time to set up if an enemy unit approaches.

Note

The Maxim HMG can easily defeat the MG42 in a head to head battle.

Machine guns have a variety of tactical uses including enfilading fire, firing from defilade, overhead fire, grazing and plunging fire. Veteran crews could direct hundreds of rounds a minute from their machine guns into very specific locations.

One of the most fun parts of the early game is trying to predict where your opponent will try to attack from next, and set up your HMG to cover that area. Experts have an uncanny ability to always have their HMGs facing in just the right direction, even while being highly aggressive with them. The only reasonable situations in which to be defensive with HMGs are when you can't push any farther in an area of the map, and when you don't have sufficient units to support your HMG by scouting ahead and countering vehicles or flanking units. Never have your HMGs operate alone.

Tip

Use MG bunkers for defense, and HMGs as fire support.

Machine guns firing standard rifle rounds, including the M1910 Maxim and the MG42, could reliably penetrate 5 to 7mm of steel. Most light armored vehicles carried approximately 6 to 8mm of armor, meaning there was very little margin of error of protection for the crew. Bigger 12.7mm machine guns like the DShk 38 would punch through a half-track or armored car with complete ease.

HMGs are not ideal counters to light vehicles, but when combined with Panzerfausts or AT grenades they can work well to drive them off and sometimes get a kill. The German MG42's Incendiary Rounds veterancy ability is especially useful in these situations and can even be activated while garrisoned in a building. If you have an HMG in a building, you should only be concerned about light vehicles if they have flamethrowers—otherwise, you will emerge victorious if the vehicle trades shots for any length of time.

Heavy Machine Guns relied on a well-oiled crew to keep the gun maintained and firing. Changing barrels, reloading, cleaning actions, plus moving a heavy weapon and carrying thousands of rounds of ammunition across an active and dynamic battlefield was a demanding amount of effort.

Note

The MG42 can be crushed, causing the gun to instantly be destroyed, by any vehicle with medium crush, like the Ostwind, Panzer IV, T-34, or T-70.

HMG Placement

- Bad = arc of fire is easily flanked and faces obstacles.
- Good = Clear field of fire, arc spreads from impassable terrain.
- Excellent = Arc is bounded by impassable terrain on both sides, HMG is placed alongside impassable terrain such that its arc runs parallel to the terrain so charging enemy units will be continuously within the arc. HMG is placed in heavy cover.

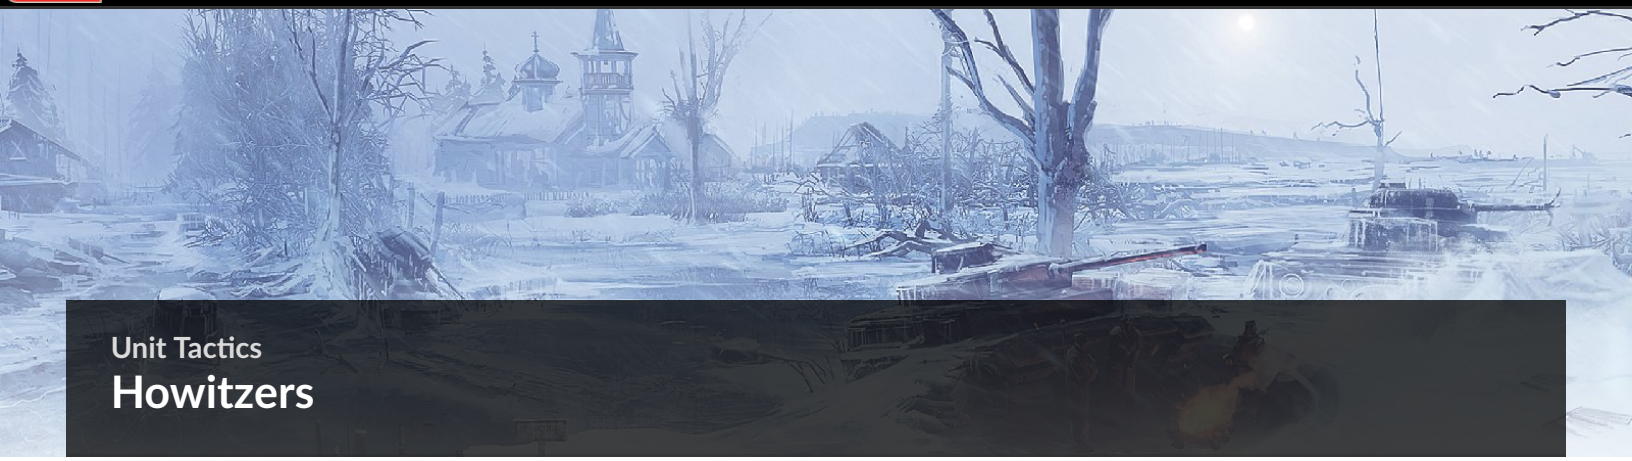

This position is terrible. There is no cover; it's on an open road that vehicles are likely to use, it can be easily flanked on both sides, and its arc of fire only extensively covers the area of road directly in front of it.

This position is decent. The HMG has light cover, any infantry advancing on the road will be fired upon, and any infantry seeking to advance from the Fuel Point can be attacked as well. Still, the position is fairly susceptible to attacks from both flanks.

This position is good. The HMG has heavy cover (directional, so it won't help against units on the road or the left, but no freezing will occur), it's able to cover the entire span of the road, part of the Fuel point, and an extensive amount of the left flank. Its right flank is protected by the hedgerow, so a unit would have to advance right up next to it before firing upon the HMG, and it's unlikely to be noticed by any units approaching it from outside of its firing arc due to the sight-blocking nature of the hedgerow.

Unit Tactics

Howitzers

Artillery could be well-directed onto fixed weapons and emplacements where the high-explosive rounds could deliver unbelievable carnage. Artillery fire is a science, and both accuracy and time on target—multiple artillery rounds from multiple guns all arriving at one time—could be achieved. Enemies were smashed by massive weight of fire before they could retreat or get under cover.

When choosing a location for a Howitzer, consider how you might make it as difficult as possible for your opponent to send an enemy unit to attack it. One technique is to construct your base buildings close to one another, and to build a Howitzer within these buildings, thereby reducing the lines of fire.

Tip

Place mines by your Howitzer to prepare for enemy vehicles rushing in to destroy it.

Construct your Howitzer within the radius of one of your base MG emplacements if you're concerned about infantry running in to destroy it.

Note

Howitzer barrages suffer more scatter the further their shots are fired. Firing at minimum range allows a Howitzer to hit dead center on the barrage firing reticle.

The number one killer on the battlefield? Field artillery. Guns—generally based on size—would be allocated and commanded at the regiment, battalion, division, corps, or even army level. The goal of the field artillery was to deliver large volumes of lethal fire against the enemy, a job that both the ML-20 and the FH-18 excelled at.

Introduction

Welcome to Company of Heroes 2 Multiplayer. You may think it's fun now, but it only gets better as you improve.

I want to help you enjoy CoH2 as much as I do. I love microing units in hectic engagements and I love developing new strategies. The former requires strong mechanical skills like using control groups and hotkeys, as well as a varied store of tactical knowledge to know how you should react in different situations. The latter requires a deep understanding of unit roles, group dynamics, game flow, and player behavior. To acquire these skills you'll need to spend time playing the game—you can't learn everything directly from me. However, the approach I demonstrate in this eGuide will significantly reduce the amount of time it'll take for you to become a competent player. By the end, I'll have explained the best ways to improve at gameplay fundamentals and how to construct your own strategies.

Expertise is a skill that can be improved, not an innate ability. More experienced players will likely be better than you, sometimes far better, but this is only a reflection of your current skill level, not your potential. If you have fewer hours a week to spend practicing CoH2, or you started playing months after "everyone else," you may believe yourself to be hopelessly behind the good players and unable to ever match their skills. This is not the case. Most people do not practice efficiently or learn as much as they can each time they play. You might have played only one hundred games of Company of Heroes 2 and be superior to someone who has played one thousand. Fortunately, the game does not have high mechanical demands that require you to train your reflexes for hours each day. You can stop playing for several months, return, and be about the same level of skill because your understanding of strategy and tactics is far more important than your APM (actions-per-minute, a measure of player speed).

Introduction

Micro (micromanagement) is a common word used across all competitive gaming communities. Better micro is an aspiration of the many, although it has also become a crutch for those that wish to enter the competitive scene. There is only so much time we have to dedicate to gaming and our bodies can only take so much physical strain. High-level matches in the top competitive games reflect years of work put into heightening technical skills and reflexes, yet typical gamers reach a point at which they don't believe they are physically capable of reaching that level. Fear not, gamers, for Company of Heroes 2 will not make you say, "My body could never handle this." What makes a good player is the ability to analyze the current situation, relate it to their knowledge of the game, and decide what the best course of action may be. In this sense, strategy and tactics are far more important than simple micro. Knowing when and where to click is necessary, while performing over 400 actions per minute (APM) is not. Often, games are decided by superior positioning, focus targeting, and countering your opponent's strategy, all of which require more knowledge of the game than technical practice. Granted, this is not to say that micro is not necessary; much of the game's most exhilarating moments come from blowing up an entire squad with a grenade, dodging Mortars, barely evading a hostile HMG, running over infantry with superb tank micro, and getting that quick Panzerfaust on a flamer Scout Car before it can kill your squad. By using these tactics, many experts will maintain a high APM, and in order to compete with them, you will have to train a considerable amount. If experts didn't have to train, would it still be a dream to one day become an expert yourself?

Don't expect that you have to put in a lot of time to enjoy the game, though. With the current pace of gameplay, an average game between players of equal skill will last around 40 minutes—enough time to enjoy yourself while maintaining focus on the battle. In games featuring a skill disparity (whether you stomp your opponent, or you're being stomped), play will last anywhere between 10 and 25 minutes, shortened by the ability to surrender and clear evidence of when someone is too far ahead to defeat. In comparison with other games, these times are quite reasonable. For more casual players this game will not feel like it is wasting your time, especially when compared with other options.

Two equally skilled players battling it out usually ends in a very close game, but not simply because they're close in skill. Company of Heroes 2 has added content to make matches far more interesting throughout each stage of the game. While the player that acquires an early-game advantage over the opponent has a strong chance of claiming the victory, the presence of a primary resource income based on army size rather than territory control allows for the constant threat of a comeback. Many professional and recorded matches have been already shown this mechanism in play with great back-and-forth gameplay. However, this does not mean that the player in a better position is gutted of his advantage. Territory control grants a substantial amount of secondary resources used for upgraded weapons, vehicles, and epic off-map artillery (not to mention control of the Victory Points is necessary for victory). The game does a nice job of maintaining players' optimism and enjoyment, leading to a fun experience for players and viewers alike at any stage in the match.

One of the key elements to making a successful video game is allowing the player to decide how they want to play, as opposed to forcing them to play in a certain fashion. In Company of Heroes 2, there are quite a few variations to normal build orders, most of which are still viable. There will always be a popular build order for each faction, such as a four Conscript opening or a Grenadier-HMG-Grenadier build order, yet these are not required to win a game. If you want, you can play Germans and build three MG-42s right at the beginning and still feel like you have a chance at winning. Every unit has strengths and weaknesses, including the HMG's extreme vulnerability to Scout Cars, yet that does not mean it isn't a viable strategy. Every risky strategy has a counter, and every safe strategy can be punished. Play how you like, but remember that a single strategy will not work every single game; eventually, someone will find a way to beat it.

That brings me to my next point: the metagame. With a surplus of available strategies and build orders, the current meta should continually evolve, creating a Company of Heroes 2 that will be vastly different in several years simply by the efforts and theorycrafting of the community. The developers will likely tweak numbers every now and then to spark a change in the meta, making certain units more viable and others less strong, but it is nice to know that the game will evolve regardless of their work (although perhaps less effectively and at a slower pace).

The Community

Multiplayer games are best when you play with people you know and when you form relationships with new people. Find someone in real life to play Company of Heroes 2 with and watch the matches for more structured, Find a hero: a player you really admire whose games you watch and for whom you cheer. Watch twitch streams, watch YouTube shows. Delight in things you do well and enjoy making fun of yourself when you totally fail. Create imaginary friends, like Fred the Tiger Commander, and talk to them when you play. Please stream yourself on Twitch.tv doing this so others can join in the fun. There are many ways to enjoy Company of Heroes 2, from playing in tournaments to casual 4 vs. 4 matches against AI opponents, but they all depend on how much you enjoy competing or laughing with your fellow players.

Your best experiences will be tied to the people you interact with, either during games or around the community, not winning a few more matches. If you wish to be respected, be kind whether you win or lose.

The Player Life Cycle

- The Typical Newbie: Passive with his units until he has the "perfect" army finished, moves his entire force as one group, doesn't like people who attack early ("no rush 20 mins"), prefers to play on maps with few movement channels (often bridges) so he can focus on only a few areas of the battlefield. We'll all been there.
- Custom Team Games Only: This player has some knowledge of the game but prefers to play in large team games because he likes big battles with lots of units.
- Finds a Partner/Clan: This player starts to get annoyed that he can play well in a match and still lose because his allies are much lower in skill level. He realizes that coming up with strategies with a partner and trying them out in games sounds really fun!
- Beyond: There are many destinations for players. Those who get really interested in continually improving their skills and mastering the game will gravitate toward 1 vs. 1 and 2 vs. 2 (arranged teams). Others might be less interested in improving their own playing skill, but wish to be more involved in the community; these people will become modders, map makers, tournament organizers, writers, and artists. Enjoy Company of Heroes 2 in whatever way is right for you. I just want to expose you to how much fun it can be to improve your playing skill in such a thought-provoking game.

Player Types

As with using personality types to understand people and the way they interact with one another, Company of Heroes 2 players can be analyzed by *playstyle* and the strategies they tend to prefer. This approach is especially useful if you play against someone consistently, because it gives you an advantage in predicting what course of action your opponent is likely to take. When you're playing against a human player, try to ask yourself which of these categories he falls into and tailor your own strategic and tactical decisions accordingly.

Hans

Highly aggressive early gameplay; prefers to always be on the attack and dictate the course of the battle. Hans is dangerous if he's able to seize most of the map at the beginning of a match and hold onto it. The ideal counter is to use his preference against him: Pick a strategy yourself, like the Ivan playstyle, that is best countered by defensive play. For example, fast-teching to an assault vehicle may throw off a Hans who has focused on producing versatile infantry without adequate anti-tank support. A steady advance to his cut-off point using multiple team weapons, like HMGs and Mortars, with supporting infantry would also be troublesome for Hans, as he'll desire to defend himself by throwing all of his infantry against you.

Ivan

Conservative approach that capitalizes on an opponent's mistakes; willing to accept an early game with little territory and slower expansion. Ivan relies upon over-aggressive opponents who squander their resource advantage by engaging in battles where Ivan has a superior force or position. A player who begins with an aggressive early game but transitions into a conservative mid game will excel against Ivan because neither will take large risks, but Ivan will have fewer resources. Do not concern yourself with winning a game too early against an Ivan. Instead, scout his positions and produce the proper counters to the units he builds, foiling any attempts to expand.

Dieter

Willing to accept a weaker early game to get a fast assault unit, usually a vehicle. Dieter is like Ivan, but rather than rely on his opponent's aggression, he relies on failures in his opponent's prediction. The problem for Dieter is his assault unit must be effective enough on the battlefield to make up for his lack of map control in the early game. If you can successfully predict which unit Dieter will build, and ready the proper counter, you will be at a strong advantage in battlefield superiority.

Vlad

Prefers a force with many fungible units (able to perform the roles of others) and redundancy in key units (HMGs and AT guns) to increase resilience. Losing any one unit won't be a problem for this player as others can fill the gap. Vlad's strength is that his army will not fall apart after losing a battle or even a unit, and it won't have any obvious weaknesses. However, if you can mix specialized units to stop your army and support them effectively, Vlad won't be able to stand against your forces in equal fights. For example, a Vlad that uses several Grenadier squads without team weapons will be susceptible to HMGs, Snipers, and Mortars supported by other infantry. Vlad doesn't have any major weaknesses, so you must either be of similar skill to your opponent and use specialized units to gain an advantage, or be higher in skill and make superior tactical decisions. There is no direct counter to Vlad.

Klaus

Prefers to rely on key, *micro-intensive* units (Snipers/light vehicles); highly effective but not resilient to losses, as losing a specific unit might cause the entire strategy to fall apart. For example, a Klaus might rely completely on a Half-track with Flame Projectors to counter mass infantry, as compared to relying on Grenadiers supported by HMGs. (New players who love a specific unit should be in this category, but I'm in this category too!) Klaus succeeds or fails depending on how well he controls his critical units. To counter Klaus, it can be worthwhile to invest many resources in defeating his key units for the psychological effect of thwarting his preferred strategy and causing frustration or confusion, even if the resource trade-off is in Klaus's favor.

Sergey

Enjoys beating people with wildly unexpected strategies. In the first Company of Heroes, a German strategy known as Piospam was discovered nearly a year after the game's release; it relied on many units of Tier 0 Pioneer squads instead of the more typical build order involving main line infantry and HMGs. Another unexpected strategy involved acquiring a high Munitions income at the start of the game and placing a great deal of units to protect an early Sniper against infantry and light vehicle attacks. It's hard to predict whether your opponent is a Sergey unless you've played before. However, Sergey's main weakness is the resource inefficiency of atypical strategies. They're atypical for a reason, and Sergey decides to use them more for novelty and psychological value than for their unequivocal superiority. As a counter, play conservatively until you can think of a counter to whatever strategy you see.

Hans and Ivan Play CoH2

Meet Hans. When he's not "fighting the Soviet dogs" in huge 4 vs. 4 battles with his friends, he's playing football or studying business at the local university. He's an avid German commander and his favorite unit is the Tiger. Why? Hans: "It's big, it's loud, and I like to play 'Eye of the Tiger' when it comes on the battlefield!"

Meet Ivan. He reads Sun Tzu and Clausewitz in his free time to study military strategy. He aspires to be a top tournament player and practices for hours when he doesn't have school.

One day, Hans and Ivan were paired against each other in a 1 vs. 1 automatch game.

"My Flame Projectors melt them all!" Hans says. He has a crazed look on his face as the poor Conscripts flee toward their base, away from his deadly upgraded German Half-track.

"Oh, you built an anti-tank gun! I love these" said Hans as his Half-track of Doom runs circles around the it, causing a great deal of havoc as the weapon's crew catch fire, "Aha, oh you try to touch this, you try, ahahah!" Ivan looks grim, but his resolve hasn't broken yet. Artillery shells rain down around the Half-track and the remaining Conscripts, bodies fly through the air.

"You would target your own squad with a barrage? This is madness!" Hans said.

"In Soviet Russia, death is ... Oh, hey, Hans, aren't these explosion effects brilliant? Look, look, ENGINE DAMAGE, I've got you now!"

Ivan sends in a SU-85 tank destroyer to finish off the infernal German vehicle that has claimed twenty-nine sons and daughters ("My poor Snipers!") of Mother Russia.

Frantic clicks and smashed keys emanate from Ivan's speakers. Hans must be worried now.

The SU-85 crushes a wall en route to its wounded target. It begins to cross a frozen river when its treads lose their grip on the ice, causing the tank destroyer to slide laterally into range of the Half-track.

"This is over, Hans." Ivan's lips curl in anticipation of the kill.

Hans is ready. He waves his arms like a magician.

"SMOKE SMOKE SMOKE!" A dense cloud immediately expands to conceal the Half-track entirely. No sign of it remains.

"Damn it, Hans! You're going to make me come over there!"

"You can't see me. You can't see me. Ahahaha!"

Ivan sighs. Hans has way too much fun with this.

As the SU-85 advances into the fog of war, seeking a clear shot, Ivan hears a deep rumble through his speakers. "Oh fudge."

A Tiger.

Hans can barely contain himself. "EHEHEHE AHAHA EHEHE. This will be the death of you, Comrade!"

Ivan smiles. "I find your lack of faith disturbing."

A Soviet T-34 had been prepared for just such a situation. It sprang into action, closing with the Tiger. VROOOM! "Ramming speed!"

SMASH! Both the Tiger and the T-34 are immobilized and their main guns are destroyed. Hans is devastated, he had been preparing to close out the match with a final attack led by the Tiger.

Ivan predicted this. He knew that he needed to throw off Hans to take back more points on the map. By disabling the Tiger, he nullified Hans's large resource investment in the fearsome heavy tank and created an opportunity to force a protracted battle in the open. Hans desperately sought to reach the Tiger with his infantry to protect and repair it, but Ivan's HMGs and SU-85 were able to lock down the area. They had previously struggled against Hans's mobile units, but once that advantage was removed, the Soviet units could steadily chip away at the Tiger and annihilate the units rushing to support it.

"That was a nasty trick," said Hans. "I had you beaten! It won't save you next time."

Ivan nodded sagely, "Maybe so, but I can always count on you to get overconfident and throw a game. You're my favorite angry German for a reason. Good game!"

"Yes, yes, good game. Now it's time for my Tiger and I to do some real hunting in 4 vs. 4!

Multiplayer Essentials

> **Note**
>
> This section assumes that you're already familiar Company of Heroes 2 from the campaign and *Theater of War* missions. Multiplayer and Co-op are fundamentally different experiences where your Victory Point mode and Skirmish mode, but the following advice (apart from specific build orders) is also applicable to Annihilation and High Resources.

Victory Conditions

Victory Point maps are owned to hold a majority of the Victory Points on the map to reduce your opponent's total to 0 to win, although you also win if you destroy all of your opponent's buildings–this is the most commonly played mode. Annihilation lacks Victory Points and requires the destruction of your opponent's buildings. Games played to Annihilation take longer and the economic focus of the Armored Theory 2 experience is best when you use Victory Points.

Normal Pattern of Games

In the early game you don't need to worry about defending your base or attacking your opponent at the very start. You need to secure the resource nodes that are close to you. Your opponent will be in a similar position to you at the start of the match–you relies on early aggression, focus on attacking your opponent's cut off points and force decisive engagements in which you exploit to have the advantage in the open. Your strategy: if you're losing the conversation early play to facilitate fast-teching or the construction of a combined arms force, try to harass your opponent in diverse areas of the map to avoid being pulled into decisive engagements.

If you have less than half the map, don't have a resource disadvantage that will lead to your losing superior enemy forces. This is an encouraging sign–although you're losing the battle for map control, you're not losing the war for map control and resources. For example, you might intend to place fast Pak Cannon Fire sectors near base and defend a third of the map until your Victory Point income is greater than your opponent's. Your strategy: play defensively. Alternatively, you might decide that it's more important to deprive your opponent of resources than to hold most of the resources yourself. If you control only a quarter of the map but also control your opponent's cut-off points, you'll have a resource advantage.

The mid-game is defined by the use and countering of light [vehicles](#) and combined arms forces. Depending on your strategic choices, you'll be using a mixture of [infantry](#) and [vehicles](#) in a number of counters to those of your opponent. Your strategy: you should test your Fuel while vehicle counters still draw on your Manpower or Munitions (for example, AT guns cost only Manpower and Munitions). Your opponent will be in a similar position to you at the start of the match–you relies on early aggression, focus on attacking your cut off points and force decisive engagements in which you exploit to have the advantage in the open. You should suffer to do this now than wither you're still establishing map control or later when you'll often be spending your resources on tanks and their counters.

The late game begins with the arrival of heavy tanks and artillery on the battlefield. Battles become more decisive because [vehicles](#) cannot Retreat and are not easily repaired. While resources are still important for replenishing [infantry](#), rebuilding [vehicles](#) is difficult. Your strategy: you should have a fuel advantage by the late game. Your [vehicles](#) and [artillery](#) units that complement each other better or that have the advantage at this stage of the game, because the heavy tanks from harassing points is creating and destroying fortified positions using combined arms.

> **Tip**
>
> Throughout a game, ask yourself: How aggressive is my opponent right now and what does that tell me? Against a competent player you should assume it is an aggressive player until proven otherwise. Your goal is to something. He's investing in round out his force with a couple of [key units](). Are all AT guns to support a weapon team or infantry force, or a tank to function as a breakthrough unit? Is he using his [Support Units]() to counter your [Support Units]()? Is he using his [Support Units]() to counter your [vehicles]()? Is he using [artillery]() to counter your positions and force negative counters to his likely strategy–for example, AT gun or tank dominant opponents against tanks, HMGs against assault [infantry]().

Units and Synergy

Unit Roles

- Support: Increase the effectiveness of other [units]() (non-upgraded Half-tracks, Engineer Platoon, Artillery Field Officer).
- Mainline: Versatile [units]() that can function independently and in both offensive and defensive capacities (Grenadiers, Conscripts).
- Assault: High mobility, short range (Panzergrenadiers, Shock Troops, PPSH submachine gun-armed Conscripts, Scout Car).
- Anti-garrison: Powerful [units]() garrisoned in buildings (Engineers/Pioneers with Flamethrower, Penal Battalion with Flamethrower, Conscripts with Molotov Cocktails, Panzergrenadiers with Panzerschreck).
- Anti-tank: Able to damage or disable enemy [vehicles]() (Bazooka Infantry, Panzergrenadiers with Panzerschrecks, Conscripts with AT Grenades, Grenadiers with Panzerfaust).
- Fire Support: Low mobility, long range (Mortar, M1 AT Gun, Defend).

When you consider how specific [units]() will work together in your army composition, you first need some framework for evaluating [units]() in terms of roles. Beyond that, you need to understand the effectives between versatility and specialization in unit design.

Versatility

A versatile unit has the ability to act independently and engage any unit it comes across. Most [units]() deserted versatile are able to damage both [infantry]() and [vehicles]() with some effectiveness. Infantry like Conscripts, Guards Rifle Infantry, Grenadiers, and Panzergrenadiers are able to engage [infantry]() in the open areas, pinning them with small arms fire and [grenades]() or AT grenades like Conscripts and Panzerschrecks for Panzergrenadiers. Versatile [vehicles]() are notable for not requiring support units to be effective. The Sherman Assault Engineer, Sherman Firefly, Sherman Jumbo, T-34/85, Panzer IV, Panzer IV/70, Panzer IV/70(A), Panzer V/Ausf.G, and Stuart M5A1 Light Tank can be loaded with varied [infantry units]() to increase the vehicle's effectiveness against particular unit types (for example, Guards Rifle [infantry]() against light [vehicles]() or Combat Engineers with a Flamethrower against garrisoned [infantry]()). Versatile [vehicles]() are also [vehicles]() that can engage [vehicles]() in open areas using only these [units]() against which they excel while avoiding other [units]() Versatile [units]() are inferior to specialized [units]() in their specialty, but they're also not as vulnerable to being countered. The Sherman Assault Engineer can't engage [vehicles]() as well and fewer mainline [vehicles]() than the Sherman Jumbo, but it can't be countered by [infantry]() and can't be pinned by [artillery]() as well. The Sherman Jumbo's versatility and ability to engage [infantry]() and [vehicles]() at long range provides artillery fire support against enemy [infantry]() or fuel to preserve for more powerful artillery like support units that have the ability to engage enemy [units]() outside of its barrage ability.

Specialization

A specialized unit is exceptional at one role in certain situations, but it requires the support of other [units]() to make up for its broader weaknesses. An example of a specialized unit is the Sherman Crusader AA. The Sherman Crusader AA is designed to [infantry]() unit or beam weapon it comes up against, and it can be flanked if left alone. In choosing to build specialized [units](), you are increasing your ability to counter specific enemy [units]() but also you're losing versatility. If your opponent has specialized [units]() you can counter them with a smaller investment in specialized anti-tank [units]() like the AT gun, 50-85, and Defend. This means you're able to use your [resources]() to build versatile [units]() that can engage a variety of enemy [units]() that aren't specialized anti-tank [units]() that do not have a mass deficiency.

You can look at a group of [units]() that consists of a Panzergrenadier squad with Panzerschrecks, a Pioneer squad with a Flamethrower, and a Half-track to carry them both. It's not important that Pioneers are ineffective at destroying [vehicles]() with their Flamethrower or that the Panzergrenadiers are ineffective at attacking [infantry]() in the open. It's important that the [units]() are versatile in that they're able to [infantry]() and [vehicles]() in a number of situations. The Pioneers upgrade because both the Half-track and Pioneer squad can make up for it. I look at a group like this as a [unit]() that's highly versatile and capable of engaging a variety of [units]() in a number of situations but [infantry]() (usually flanks) where you're unlikely to find a combined arms force. Players typically capture territory on flanks with [units]() like this and then consolidate their gains. Your strategy: you should be able to engage [infantry]() in the open, [infantry]() in buildings, and [vehicles]() with this [unit]() and its upgrades. Your opponent: you should be able to counter this [unit]() with [infantry]() and [vehicles]() that specialize in anti-[infantry]() roles like Grenadiers, heavy tanks, and AT guns but one loses. Light [vehicles]() are a major problem for [infantry]() without anti-tank weapons, and they are vulnerable to [infantry]() with anti-tank weapons. Light [vehicles]() are also [vehicles]() that will serve well long out of it. A Half-track with one or two [infantry]() squads being out of it. T-70 light tank, or T-34 medium tank.

So how do you use this group of [units]()? Send them on a lightly defended patrol. The Half-track is there for mobility, built to get the [infantry]() squads where they need to be. The Pioneers are there to destroy [vehicles]() that are unsupported by [infantry]() and to destroy [infantry]() in buildings. The Panzergrenadiers are there to destroy [infantry]() in the open and [vehicles]() that are supported by [infantry]() that can't be engaged by Pioneers. Your strategy: you should have a group of [units]() like this that can engage a variety of [units]() in a number of situations. Your opponent: you should have a group of [units]() like this that can engage a variety of [units]() in a number of situations.

Infantry vs. Vehicles

[Infantry]() are nice because they can "nuke" themselves by spending Manpower, which is called reinforcing. [Vehicles]() cannot be reinforced and are destroyed for good. Fuel is also a limiting factor for [vehicles]() but not for [infantry]() (which is why [infantry]() are the backbone of the early game). [Infantry]() can also capture [resources]() and [victory points]() to help you win the game, and they can capture [territory]() and [victory points]() to help you win the game. [Infantry]() can also capture [resources

Each Commander has an optional Passive ability, which is activated the moment you select them for your squad. Commanders also have a unique Active ability, which can be activated by pressing the Ability button (default: Q) when the Commander is selected. Active abilities have a cooldown timer, which begins counting down after the ability is used.

The Pentang Arsenal Commander Selection Screen. Each Commander has a unique Passive and Active ability, as well as a unique Ultimate ability. Ultimate abilities are powerful attacks that require a full Ultimate Charge to activate. Ultimate Charge is gained by dealing damage to enemies, and by using your Commander's Active ability.

Each Commander also has a unique Ultimate ability, which requires a full Ultimate Charge to activate. Ultimate Charge is gained by dealing damage to enemies, and by using your Commander's Active ability. Ultimate abilities are powerful attacks that can turn the tide of battle in your favor. Ultimate Charge is displayed as a circular meter around the Commander's portrait in the Commander Selection screen.

Each Commander has a unique Passive ability, which is always active. Passive abilities can be anything from a stat boost to a unique mechanic that changes how you play the game. Passive abilities are displayed in the Commander Selection screen, and are also shown in the Loadout screen when you are choosing your squad.

Each Commander has an Active ability, which can be activated by pressing the Ability button (default: Q) when the Commander is selected. Active abilities have a cooldown timer, which begins counting down after the ability is used. Active abilities can be anything from a powerful attack to a defensive maneuver, and are displayed in the Commander Selection screen.

Each Commander has an

Strategy Theory

How do you think about strategy? Becoming a good strategist takes place outside of the game. You cannot think carefully while you're forced to constantly make decisions during a battle. However, the information you'll need to become a good strategist comes particularly through game experience. You need to get a feel for battlefield situations that do not have clear-cut answers. You need to develop a number of arrangement word positions because you had built a suboptimal mix of units, or because one audio tactical mines is your unit cannot.

Defense and Offense

I watch a speech with Sun Tzu's Art and Advice In Compose of Heroic 2. One of the most difficult skills to acquire is the transition between offense and defense. You could be about to get a prime, and how this translates into positioning your units. From the perception of an expert, I would liken this state to wrestling in that you feel how you produce your footing is at a given moment, how solid your opponent's position is, and which side of his body could most easily be manipulated through pushing or pulling. Conversion of Sonic 2, you're likely in this on a strategic level: you have an idea of your opponent's position worscking and instead must install data about your opponent's position through scouting, prediction, and gone knowledge. When you counter an opponent plan, you're transitioning from offense to defense. Play with the risk of the field, and cut off his next sectors, it's as exhilarating as any physical exploit in demonstrating your mastery and technique.

I don't want to spend much time discussing theories of attack and defense in the abstract, as understanding how to react in specific game situations is a better dimension of learning. What you're looking for a match to start and transitioning the broad contours of your battlefield strategy, these ideas might prove useful.

Defense Through Defense

The best way to protect an base is to strike forcefully somewhere else that requires your opponent to defend. So long as your army is equal or superior to your opponent's, it's ideal to continuously pressure him such that he has little ability to attack you elsewhere. Select the extensive use of a particular unit or a tech, and move it up. Defense through offense is often a very aggressive approach, but it works regardless of your opponent's information about your unit positions—he may be perfectly aware that an area you control is undefended, but if he cannot spare units to exploit the weakness, that information is meaningless.

Imaginary Defense

This exploits your opponent's lack of information to play with his fear using units occupy certain positions. Imagine that you're playing Terran. You've built a few Marines and a Siege Tank in your main, and you often send observers home to fix durability like to fix, but it's out to you. There's no need to risk units or spend resources to defend territory in this manner.

Mobile Defense

This form of defense relies on a rapid response force to respond to enemy movements, rather than a fortified position. It's best suited to defending an area with minimal units while attacking elsewhere. Armored cars, light tanks, and elite infantry function best in this role due to their speed, versatility, and suitability to one-versus-one engagement against most enemy unit types.

Fortified Position

The most obvious form of defense, this entails placing units in static positions that afford tactical advantages. Usually, fortification consists of infantry units in bases, mines in choke points, and often more expensive heavy units like Infantry, Mortars, and AT guns. This is the most powerful form of defense against a direct assault, but it suffers against enemy artillery and bombers. Fortified positions are also extremely vulnerable to being outflanked by fast moving units like Scouts. It's a battlefield that you know your opponent will attack, and you have the resources to build a defensive position. Building a position can effectively fight much larger enemy forces, so it's generally unnecessary to dedicate your whole army to a fortified position. It's better to put this defense approach with a mobile strike force that can reinforce areas that need assistance or take ground.

Defense in Depth

Delay an advance by yielding territory to inflict greater casualties and break momentum. This is best when you have map control and cannot defend the front line without meeting vulnerabilities on the flanks. For example, if your opponent has a Flamethrower and your only form of anti-vehicle weaponry is an AA gun, you should discretely cannot afford to be flanked. Instead, you should fall back to your next line of defense, and AA guns and the rear, and withdraw whenever the Flamethrower attacks. Once you know its tactics, maintain your AT gun accordingly.

Envelopment

This is the practice of surrounding enemy units so that they're isolated in a pocket, and it works best against enemies in a fortified position. As much as possible, avoid engaging an opponent where he's strongest and instead dominate other areas of the map. The isolated enemy units may continue to hold their position even when it's of little strategic value, or exposition and open themselves up to a multi-directional attack.

Feigned Retreat

This is the practice of attacking and then quickly withdrawing an intentionally-strength forces to draw the enemy into a vulnerable position. It's most effective when you're facing a fast unit like Scouts, Armored Cars, Light Tanks, or Infantry with lots of hits. If your opponent takes the bait and pursues, you can then turn around and destroy him. Feigned retreat is a very risky move and is has moved into a position away from supporting units and near other units of yours. This allows you to finish off the Tiger with your other forces while preventing enemy units from reinforcing the Tiger. Feigned retreat is damaged effective, and protects them bombarding your AT guns. HMGs from suppressing your Infantry, and AT guns as well as other tanks from striking your vehicles.

Bounding Overwatch

This is a form of steady advance in which weapon teams alternate covering each other and moving into new positions. This is best used with a force that relies upon HMGs and AT guns to counter enemy infantry and vehicles. Scouting with forward infantry enables a form of this tactic to advance more quickly in cities.

Strategic Aggression

What is an early game advantage and how do you make the most of it? How does the value of a unit change throughout the stages of a game? Army tailor units do you want your army to be made of in 15 minutes?1 Unit Analysis Area One fit into different groups. When is it safe to be aggressive? What is a strong unit and how can you use it? How can you predict what your opponent's evolution measures and the next units he'll build based on what you've seen so far in terms of his map control, build order, and units he has lost?

You need to continuously ask yourself: Am I the aggressor or the defender in this area of the map? If you have tak units, the answer to this question determines what you should advance and take ground or fortify your current position.

Establish the Front Line

If you've mastered the basics and have a good feel for advanced tactics, I want you to practice placing more aggressively than is typical for you. One significant difference between experts and everyone else is the degree to which they place pressure on their opponents from the very beginning of a game.

Imagine a map with a base at either end and three standard territory points in a line leading from one base to the other. What would the expert player do on such a map? Try to establish a front line at the third point away from his base, the one closest to the enemy base. What's the other main benefit of playing in this manner? It's the defender's advantage in reverse.

Novices tend to view their units as more gross rather than selecting them individually, and they tend to retreat units all together rather than individually. This is inefficient for many reasons, but to focus on how it relates to establishing a front line, if a force retreat all of your units to your main position, you've lost all map control to your opponent. It's easy to stop him from pushing up and seizing not just the area over which you were fighting, but also other points under your control? Now the front line has moved much closer to your own base, putting the pressure on you to retake lost ground. The superior approach is a losing battle is Reminding only those units that may be destroyed while moving back your other units into stronger defensive positions, giving you the ability to outflank your opponent's further advances. In doing this you lure yourself time to reinforce and seize back lost territory.

Ignore the Front Line

Once you understand how to establish and manage a front line, you should start ignoring it when choosing where to target your attacks. The ideal is for your opponent to concentrate his forces on the front line, where you are most prepared to defend, while you attack your opponent's undefended areas. Imagine a map with a base at either end and three standard territory points in a line.how expert players put pressure on their opponents and make it feel like there's nothing you can do to stop them. It sounds very vague attacks when your opponent is weakest and defend when you are strongest but it's a piece of advice that novices need to take to heart.

Predicting Your Opponent

Accurately predicting what units your opponent will build, and when and he's likely to attack will win you games. How are you to do this? The simplest way to predict a variety of strategies with tactics like Scouts, but you're also able to do more yourself during a game, when I play using the strategy my opponent is using right now, and I get into the situation my opponent is in right now, what do I typically do? The answer is that you're looking for your opponent's strategy to reveal itself. experts. Initially, you just want to become comfortable controlling your own units and executing your own strategy, but as you gain more experience, you should start to pay attention to what your opponent is doing and consider what you'd do in his place. The best players are able to predict their opponent's next tactical move and counter it before it's even executed. Let's say you've gained without big of war? At the high level, all sorts of mind games begin happening as each player tries to reveal information that throws off the other and conceals their own intentions. Sometimes you'll make sufficient experience, and other times you'll be outwitted. Here's a few examples of this in the "Should I Worry About?" section, as these refer to the most common responses by players who use a strategy.Offense

One type of prediction that doesn't require extensive experience relates to resources. How much Fuel and how many Command Points does your opponent have? This information will tell you whether you need to be preparing for a counterattack or if you have the opportunity to launch an attack yourself. Let's say you've been playing a game in the same number or you can build two units a minute. Your opponent has only a single base and has been building Infantry exclusively for a while. For fuel, if your opponent has held more points, and especially more Fuel Points, or built Fuel Caches, his Fuel income will be higher than yours. Has he been spending it? How much? If it's twenty minutes into a game, you and your opponent have held equal amounts of territory, and you've been built only a single Halt track in the entire game, you ought to assume he's saving for heavy tanks or Artillery. Or he's about to launch a massive attack. Be willing to confirm your predictions by scouting. don't build counters to units that never appear. For example, an Orthen player might lead you to believe he's saving for a Tiger, yet continue to produce Infantry. Your opponent's Command Points and AT guns look dangerous—it's a good idea to get some amount of anti-vehicle weapons preemptively, but be sure to scout his base and see whether he has built the Tier 4 structure before you heavily invest in countering a Tiger.

Tip

A good way to enhance your prediction skills is to watch replays from one player's perspective with the fog of war on and see how accurately you are able to predict the other player's decisions.

Timing Attacks

These take advantage of a temporary disparity between the units you have on the field and your opponent's ability to counter them. For example, if you get a T-34 on the field before your opponent has a tank of his own to counter it you can dominate an area of the map with a Medium AT gun.

Timing attacks have timing windows, which are the period of time during which the advantage exists. Using my example, the window is open from the time the T-34 is built until the first German tank comes on the field. If your strategy involves a timing attack, it's critical to build and advantage of the timing window—whichever player does this best will generally win if he preserves the advantage he gains.

Often, several timing attacks and their related windows exist throughout a game. They are usually related to having the resources to build a new unit or tech before your opponent can counter it. Let's say you've been playing a game where you've also be used in timing attacks. A Scout car is a relatively cheap unit and requires little support to be effective, which is why it's remain where he is and worry less little. If the same Pioneer squad had a Flamethrower, he would likely back away, retreat, or send another unit to support the Grenadiers. Your opponent's reactions are in responses by beginning to build the Flamethrower upgrade on the Pioneer squad such that is now born until only a single Halt track in the entire game, you ought to assume he's saving for heavy tanks or Artillery. Or he's about to launch a massive attack. Be willing to confirm your predictions by scouting. don't build counters to units that never appear. For example, an Orthen player might lead you to believe he's saving for a Tiger, yet continue to produce Infantry. Your opponent's Command Points and AT guns look dangerous—it's a good idea to get some amount of anti-vehicle weapons preemptively, but be sure to scout his base and see whether he has built the Tier 4 structure before you heavily invest in countering a Tiger.

Timing attacks can be risky because your opponent's decisions: if you see your opponent build Halt or Munitions Factory, you know that he will have lower your opponent's decisions: if you see that this unit should be the one that you're able to take advantage of his heightened exposure.

A final type of timing attack relates to blizzards. Blizzards reduce line of sight and cause Infantry to freeze in the open. this makes Blizzards a good time to initiate vehicle based assaults. For example, a Half-track carrying Infantry squads can rapidly reach an opponent's undefended points and unload its troops to capture them. Blizzards can also be used with other infantry weapons. Another example, if you're planning to attack a defensive position with an assault tank, doing so during a blizzard allows you to close to point-blank range before AT guns are able to attack you, creating easier opportunities to flank.

Additional Strategic Behavior

Forcing

You want to dictate the pace of the game. It's far better to force your opponent to respond to the units you choose to build and fight where you want to than to be continuously responding. The concept of forcing in a strategic sense means taking an action that demands a response from your opponent and creates a specific response that you're able to predict. For example, on Sword2, if you build multiple Scout Cars in the early game, your opponent will be forced to play more cautiously until he can build his own Scout Car or Engineer to capture and hold the Munitions Factory. Your Scouts will be harassing his economy.

Assault units and fire support units are most typically used in forcing. Early Scout Cars, the German Halt track with Flame Projectors, and the Orthen Ape all units Scouts and Armored Cars are effective at forcing units like Infantry and Light Tanks. While the marauding T-34 can be scary, once you have the proper counter available, it's just a matter of waiting for it to come to you, or else steadily advancing under the cover of your counter unit. Snipers, Mortars, and artillery units are different. They demand offensive responses. Novice players especially struggle against well-defended artillery because the proper response is often far too slow. Not only must the proper counter units be built, an offensive must also be planned and directed against a prepared enemy force.

If you're successful in forcing certain responses from your opponent, the task of predicting his strategy will be simplified, allowing you to respond to his future choices accurately.

Harassment

You can send mobile units to capture your opponent's rear points, usually without needing to fight, so long as you don't intend to hold them. Not only is the unit sacrificed to capture your opponent's Fuel income but it's also lost to your opponent's attention. Psychological warfare is powerful, especially against non-experts, so whatever you can do to stress out your opponent and force him to pay attention to more things than he's comfortable with will lead him to make mistakes.

Diversions

A diversion is an action specifically aimed at causing your opponent to pay attention to an area of your choice while you take decisive action in a separate area. One common diversion is throwing a grenade on one side of the map immediately before throwing a grenade elsewhere—your opponent will typically dodge the first of these. Against an expert, try to throw several grenades simultaneously to truly tax his attention. You can do this same principle with off-map Commander abilities like Artillery Barrage and Recon Flight. Another example is using a Scout Car to attack a base on Sword2 while the T-34 Attack Ace is throwing a grenade at a defensive position in a completely different area of the map. Diversions are most effective relates to line of sight. If your opponent is using units that have defined ring arcs, like HMGs and AT guns, threaten him with a unit from one direction to force him to reposition tight before you attack him from another direction.

Scouting

Research build orders for both factions so that you know what routes your opponent is likely to take, then determine what information will let you know which route your opponent is actually taking, and finally acquire that information. One way to know what your opponent is doing is to maintain scouts in his base at all times. If you don't see any Scout Car from Sweets, you can reasonably expect a build order of four Grenadiers into Tier 2 for an HMG and a Mortar).

What to Worry About: Strategy

I'm going to ask the question "What should I build now?" regarding several strategic situations in the mid or late game that build orders don't cover. You should always be working on mind-game to game, but some situations may cause you to consider detailing, what are these situations and what are the best responses?

Situation: Battlefield superiority and attack on about equal, and my opponent has strong middle infantry Direct. Response: Your units will be dealing with the Soviet vehicles when you're not supporting the western tanks in the right. You'll need building Tier 4, and I'll need to build Tier 3 units.

Response: Your units will be dealing with the Soviet vehicles when you're not fighting near your AT guns. You have Tier 4 and Fuel, so a heavy tank is your best option to add a new fighting capability to your army. Which should you choose? It depends on whether your main battle against an. If you call on upgrade are only two of your Command Points, you probably also need additional anti-infantry power. Both the Brumobar and Elefant are capable of defeating anything your opponent has in a direct fight, but both are too slow to be used as mobile defense forces. If you select the Brumobar, your opponent will have a large force, one of these tanks is best—the Brumobar's anti-infantry power is very useful, but if you think your opponent might have a large force of Infantry, the Elefant is better. The Elefant's anti-infantry power is not as effective is the most mobile and versatile, able to both fight and serve any infantry or vehicle, but it lacks the increased effectiveness in a specific role that more specialized units provide. If you need to protect a large amount of territory against harassment by light vehicles, the speed and sound of the Panther is what you want.

Situation: Opponent is playing very conservatively. He is likely stalling to tech.

Response: Attack key locations that will force a response. Ramp up your aggression until you receive a response. Prepare counters for the predicted higher tech unit.

Situation: You're behind in battlefield superiority due to a tactical error or a lost unit.

Response: Play conservatively and wait for your opponent to make a mistake. Often players will feel pressured to "get even" and lose battles when they're at a disadvantage and destroy their chance at a comeback.

Example of Creating a Strategy

Downstar vs. Allstars

Let me walk you through an example of strategic planning in Company of Heroes 2. During the SNF Closed Beta tournament, my partner Sundwarf and I (Eldstarr) were preparing for a match against the Allstars team of Symbiosis and Gamori, renowned experts who used a unit called Snipers.

Symbiosis likes Snipers. Instead of using the common Special Rifle Command build order of two MG42 Scout Cars and Combat Engineers with Flamethrowers in addition to a mobile infantry force, Symbiosis builds Snipers. By mid game he had both three in the tournament match against us. Gamori was also an Allstars player, and he's known for using Snipers as well, so this threw men each, meaning that Snipers are dangerous adversaries, especially when several shoot simultaneously. Imagine a group of Grenadiers walking down a road. Three Snipers appear on a ridge and fire at the group. Two men fall dead, and the rest head from long range. We'll see later that Snipers are not the only unit that can do this, but they're the most common. Sundwarf and I had transitioned into building T-70 light tanks and/or T-34 medium tanks to aggressively seize map control, especially over flank sectors that are unlikely to be guarded by Snipers or Infantry.

Alongside this, Gamori uses a more traditional build of Conscripts, Maxim HMGs, and AT guns to create a defensive wall for Symbiosis' Snipers. Gamori places them too to use Panzergrenadiers in large numbers, and the Allstars' strategy counters this tendency. Three strategy units positioning about a group of men is building a very tough and anything are making a big mistake. What happens when you see a Sniper? You want to kill it—preferably with a vehicle or an assault with a bunch of Infantry. Snipers are fragile, but they're also very hard to target because they're small. Your best counter to Snipers is to kill the overheating assets in the same group. Snipers have a limited number of overheating assets and become less dangerous. When you're focusing all of your efforts on breaking into a specific area defended by infantry and support weapons, you're not thinking about effectively using your forces to map and you're not thinking about countering artillery. While builds an AT gun against an enemy with three Snipers and no tanks?

That is the strategic problem I needed to solve. Here is my thought process. Assaulting a heavily defended position is a terrible idea unless it's absolutely necessary, so how can I maintain map pressure by attacking? If I do spread out my forces across the entire map and avoid direct engagement with the Snipers, HMGs, and AT guns, we will be able to win fights and take territory elsewhere because of three of these units are spread out and terrible at assaulting of this. Against inexperienced players, I might try this approach with the hope that the unit will break formation and split up, allowing me to pick off the Snipers when they're isolated. Gamori is not that kind of player. He's very experienced and knows how to keep his units together. Against him, the same point we would have to attack the Snipers' position in a single AT gun at a time, and I wanted to have a mobile force on the right capable of pushing into the middle whenever the opportunity arose. What should I do? I could aim to build a couple of Elefants, which are the most powerful tanks in the game, but they're slow and vulnerable to infantry. Or I could try to build Tier 3 tanks and Tier 4 tanks. Even the left decided to journey over to the right, I'd be in trouble. I could lay anti-tank mines on key movement areas and hope that there'd be sufficient to slow down Soviet tanks, but they're also expensive in Munitions and not something I could rely upon. I needed some type of anti-tank vehicle. I finally decided that the safest thing to do would be to go Tier 3 instead of Tier 4. Initially, and build a StuG to support my infantry and light vehicles against enemy light tanks. But I wanted to be able to survive the Snipers more easily than expected on the right flank, so I thought, "I'm in a strong position and I think I can hold it for a while, so I'll build a Tier 4 unit." I decided to build my tanks from the building more Fuel Caches than I initially intended and assume the risk of waiting for Tier 4.

6. Use heavy tanks to take back lost ground and reclaim the Victory Points. Spread out the tanks to force the opponents to weaken their defensive line by extending it or face a multi-pronged attack. Once a strong map position is secured, use the heavy tanks to repeatedly arrive at the enemy's defensive line and fall back to secure positions at the Victory Points to repair.

Commander Selection

The Assault Support Doctrine provides the Opel Supply Truck to increase Fuel income, the Tiger heavy tank for late game battles, and two Munitions-based Commander abilities to counter-massed infantry and fortified positions. All of these characteristics synergize well with the strategy I outlined, so both Sundwarf and I picked this Commander.

Example of Strategic Reflection

In game 1 of Downstar vs. WWD in the SNF 2 vs. 2 Beta Tournament we were able to get WWD down to 10 Victory Points while we had 485. Our early game was dominant and game was fairly solid.

There was a problem. I realized in the mid game that WWD were creating more combined arms groups that we couldn't effectively deal with using our current forces. If we wanted to beat them in straight-up combat we would need to fall back, give up ground, and wait till we could build heavy balanced forces ourselves. The other option was to sacrifice units and try as hard as possible to hold on to the majority of the Victory Points just a little while longer and win the game.

We chose the latter option and we lost.

By the time I realized that we absolutely needed to regroup and carefully consider our next move, WWD had established strong field positions, completely recovered my army, and were about to attack. The Allstars team point was only 485 and dropping, so we did not get impatient in trying to end the game. You need to be perfectly comfortable with giving up map control if you don't have the proper forces to hold it.

Look at it this way: Even if the score had been 500 to 5 before they retook two of the Victory Points, if we had no way to beat one of the forces defending the Victory Points to no way we would have won. A Victory Point count of 500 to 1 doesn't make much sense when your army movement than 300 to 300.

How to Be An Expert

"I wanna be the very best, like no one ever was ..."

The first thing I want you to learn is to love losing. Many people fear losing, thinking that it means they're bad players. What's the best way to get over this? Use a strategy that you know isn't optimal. Use a crazy strategy that you know full well is not the best but that you could be doing but which you enjoy using. I assure you, in these games you won't worry about losing because it's the outcome you fully expect--the strategy isn't optimal, after all. And if you win, you know that your skill allowed you to pull out a victory! This is an important lesson.

When you play "serious" games using build orders and strategies that you see expert players using and you lose a game, it doesn't mean that you're bad. It means that there's something suboptimal in your play that you need to correct. Maybe it's your Conscript micro, maybe it's your HMG placement, maybe it's your hotkey use. All of these skills can be practiced and improved, and none of them has anything to do with your intelligence as a person.

The only part of playing multiplayer games that can reflect negatively on you as a person is how you treat your opponent. If you start each match with a "I got F**Cscout back, here I come!" and then you lose, how much does it say about you that you're well played? It doesn't matter whether you win or lose--you're on track to becoming a well-respected and competent player.

Another important lesson: Nobody cares how many times you lose, or how you lose--they only care how you win. You could lose hundreds of games month after month, but if one weekend you win a tournament filled with expert players, you're now recognized as a good player--the past doesn't matter at all. Obviously, you'll need to maintain your level of skill after making it to the big leagues, but you'll always be judged on the quality of your decisions in a game, not whether you actually win all of the games you play.

The Metagame and You

What is the metagame? It's the game outside of the game that takes place in the minds of players. It dictates which units, abilities, and strategies are likely to be used. Bugs and imbalance have a strong effect on its contours, but the driving forces are the perceptions of players as to what is overpowered or underpowered, and which strategies are good and which are bad.

Following a new patch, the community perception might be that Soviet heavy armor is much better than it used to be, so Commanders that give access to the IS-2 and ISU-152 will probably increase in popularity in response. Some players begin using the Jaeger Armor Doctrine to gain access to the Elefant as a counter to the Soviet tanks. These two strategies may be dominant for several weeks or months, until a new patch is released that changes unit balance or player perception shifts independent of actual game changes.

For example, Soviet players might realize that because so many German players are centering their late game play on Elefants, Commanders that focus more on infantry and artillery are more viable, like NKVD Rifle Tactics and Guards Rifle Anti-Tank Tactics. In turn, German players may shift to using Jaeger Infantry Doctrine and Assault Support Doctrine if these are perceived to counter the most prominent Soviet strategy. This is the metagame.

To be a good player it's far more important to understand advanced tactics and broad strategy, but knowledge of the current metagame will give you a competitive edge because you'll be able to predict your opponent's decisions to a greater extent.

Strategies for Learning

If you're serious about improving, you ought to begin by emulating expert players as much as possible. Get into their minds. Watch their replays. Play games using their builds. Do only this until you feel like you can execute their strategies properly. More importantly, do this until you know exactly why they're using those units and how they make decisions. Don't worry about being innovative and creating an amazing, unique strategy--it's not important at this point. You don't yet have the level of understanding necessary and your mechanics are not developed enough to execute your strategy well.

Do you know how scientists are educated? They spend years studying the work of other people until they understand it very well, and only then do they devote themselves to coming up with new ideas. If you think you have an amazing idea and don't see anyone using it, chances are you didn't look hard enough or that an expert already thought of the same thing, tried it, and realized it didn't work.

When you're just starting out you should find a well-established strategy with its associated build order and capping order and use it game after game until you understand it very well and feel comfortable executing it without any reminders. You should always know what you'll be building next and when you need to build it, as well as where all of your units should be going in the early game. Until you become a more skilled player, I recommend using a strategy that is common among experts and that isn't extremely micro-intensive. It's also helpful to learn who you know that the strategy you're using is solid because you only need to focus on executing it better, and also one that doesn't punish you for micro errors.

As you're playing, keep the following things in mind, divided into mechanics, information, and knowledge--these aren't comprehensive lists, but thinking about your gameplay in these categories is useful for self-analysis. The term mechanics refers to giving accurate and rapid commands to your units in response to your tactical and strategic needs. Your mechanics dictate the data you gather during a game that allows you to predict your opponent's actions and adapt to a changes in the game situation. Knowledge is your store of information acquired from playing games, watching replays, and reading about strategy, which you'll use to make the best decision you can based on the available information.

Mechanics

- Macro: Spend your resources. Make sure none of your units are sitting idle. Build units using hotkeys and order them to capture points using the minimap and overview.
- Micro: Use unit abilities. Keep your units in cover or moving. Focus fire with your units during large engagements. Move your infantry as soon as you notice the grenade-throwing animation on an enemy unit. Retreat before a unit is destroyed. Select and control units quickly using hotkeys.

Information

- Scouting: The more you know about your opponent's army, the better your decisions can be. Scouting is how you can obtain the information necessary to make use of your knowledge. If you're unaware of your opponent's actions, it's useless to know that a Panther would be the perfect thing to build now if your opponent is building a T-34.
- Mind Games: Your opponent relies on information as much as you do to make good decisions. What if you spread a bit of false information? Make your opponent think that you're building an infantry-heavy force when you're actually building heavy tanks--you'll have the advantage when you finally reveal your true intentions.

Knowledge

- Build Order: know exactly what you're building next and when. know the situations in which you might deviate from your build order.
- Commander Selection: Know which Commander you're intending to select depending on the situation. and how long you're going to wait in a game before the decision. For example, it's the perfect wish Commanders your opponent will depending on the information you gather about his other choices during the game. like how aggressive he's playing, which units he's building, and which "holes" might be leaving in his army composition that he's intending to fill with Commander call-in units.

Practice and Fun

To become an expert, you'll need to practice. For practice to be effective, you first need to feel comfortable with the game and view it as a source of fun and fulfillment. Fulfillment will only come once you begin improving, but you can work on having fun even as a total noob.

Start playing 4 vs. 4 matches and talk to your teammates. If you find someone nice who tries to play as a team, send that person a message after the game and suggest queuing for a few matches together. This is how you'll build up a group of friends to play with if you don't already have some. Team games with friends are so much fun! When I started playing the Company of Heroes, I played large team matches for months before ever trying competitive 1 vs. 1. Still, do your best to improve! It's so much fun to improve. I loved the feeling of leading my team to victory when at seemed lost. A better player in team games can often fight off two weaker players single-handedly and position his teammates to make a comeback.

When you decide to get more serious about improving, once per week work on refining a single aspect of your play. Play for fun all of the rest of the days of the week, but set aside one day for refining. Don't set goals for how many games you're going to win, set goals for how many games you're going to play. The more games you play, the more experienced you'll become.

Ideas for Improving

- Play a best of three or a best of five against someone you know who is similar in skill. Create a mini-tournament with a group of friends.
- Pick one day of the week to be a session night. On this day, play serious games for at least two hours.
- Refine a single strategy. Use it over and over until you've faced a broad array of different strategies.
- Save at least one replay from each of your play sessions. Every couple of weeks, go back and watch one of your replays from a while ago. You'll probably laugh at the mistakes you used to make and you'll realize how much better you've become.
- Get involved with an online fan community so you have people to talk to about strategy. You can post your replays to receive feedback on your play, find replays of expert players to watch, and meet potential practice partners.

How to Watch a Replay

Watching a replay for fun and watching a replay to learn are quite different. When doing it for fun, you'll often watch it straight through at 1x speed with big ol' mouse cursor and the make actions, occasionally looking at how the rest of the map is fairing --similar to a match with commentary on Twitch.tv or YouTube.

Analyze your replays in terms of mechanics, information, and knowledge. Where did you succeed or fail in those areas? When watching an expert replay, keep the fog of war on and watch a game from just one player's perspective. Constantly ask yourself "what did he just do that?" Think of alternative responses and how well those might have worked. The expert didn't have perfect information while playing the game, so to replicate his playing experience for yourself as closely as possible, you need to limited your available information to only what he could see while making decisions. Watch a replay of yours and immediately after watch one of an expert using the exact same build order as you. What did he do differently?

When watching to learn you should be pausing often, restricting your focus to certain areas of the map even when there isn't much going on, and watching the same replay multiple times with the fog of war on. Focus on different areas of the map each time. or watching from a different player perspective. You should also go into the replay with a list of things in mind that you're trying to work on personally to which you're going to pay special attention.

For example, let's say you have issues countering a fast T-34. Watch a replay with fog of war on and follow the German player right when he sees the fast T-34s start to appear. Think to yourself "given the map positions, your resources, and your available units, what's the best course of action?" When you're playing you don't have the luxury of objectively considering your available options and the best response--you need to react quickly and decisively and before your opponent can tell you've pushed back into your base. By watching how the German player in the replay responds, you can get some ideas you might not have come up with on your own. Go back and watch the early game with the T-34 comes out from the Soviet player's perspective with fog of war on. Imagine that you were the Soviet player here: Given what you've seen about the German player's army composition and positioning, where should you attack with your T-34 to do the most damage while ensuring that it isn't destroyed by an AT gun or disabled by a mine? Then, watch what the German player actually does.

Here's the key part: When you're thinking as the German player in that replay you often feel vulnerable and worry about getting completely overrun--how could you possibly deal with such a fast T-34? Mines and AT guns feel so unreliable and they can cover only so much territory. But, when you're thinking as the Soviet player, you worry that your large tech investment won't pay off because an AT gun could be hiding just around the building and there are so many choke points that look like great spots for mines--if I'm cautious with the T-34 to avoid the AT gun, but if I charge in it could be destroyed or immobilized.

It's crucial to realize what your opponent is likely thinking and feeling at any given point in a game, and to know just how many AT guns and mines he could reasonably have, as well as where they could reasonably be. By watching the replay in this fashion and going through these thought exercises you'll come away having learned far more than by watching a game without fog of war and without pausing to reflect on how you'd respond to the scenarios if you were playing.

Company of Heroes 2 looks so simple without fog of war—"don't drive onto the mine!" you think while watching--but the reality of play is intense. You feel like you're wandering through a forest full of wolves at night with only a candle and a dagger, even though you realize at some level that there's really only one wolf and he's just as scared as you are.

When you're looking for lessons while watching replays of games you lost, it is not effective to say "Oh, I didn't spend my Munitions enough. I should spend more Munitions." This is a way too vague to be useful. What happens next time you play, assuming you remember your lesson? You think to yourself "I should spend more Munitions" and perhaps you upgrade an Engineer squad with a Flamethrower, or use Cloak more often, or upgrade Medium vehicles so you can spend Munitions on those. While you are making better use of the resource, you are not doing it in a directed way in line with your strategy or the game situation.

When you see that you aren't spending your Munitions, look at various points in the game to determine when it would be best to spend them and what things you should be spending them on. For example, as Germans, if you struggle a lot against HMGs in buildings early game and you float lots of Munitions, a flamethrower on a Pioneer squad is a great idea! However, if you find that you're already overrun by Conscripts just as you're about to upgrade your Tiger, then it's not going to get that early flamethrower? What about upgrading an LMG42 on your first Grenadier squad? Or, what about saving all of your Munitions until you hold 75 so you can build a Half-Track as soon as the T-2 unit and flamethrowing upgrade is at the Panzer Elite? Pioneers are only a certain good counter to lots of Conscripts. What if your opponent gets fast Scout Cars? Should you spend Munitions on Panzerfausts to destroy them, or try to avoid them until you can build a Scout Car Unit of 2?

These are the types of decisions regarding spending your Munitions that you need to be thinking about. Certainly, make an effort to not float Munitions, but go into a game telling yourself "I'm going to upgrade my second Pioneer squad with a flamethrower, and I'm going to always save one of my Munitions in case I need to call in Panzerfausts against early Scout Cars," or as Germans using the Assault Support Commander, "I need to spend my Munitions late game on strafing runs any time I see a concentration of three or more infantry squads and I have units nearby that can engage!"

- Before a serious play session, write down specific, measurable learning goals like "I will maintain four Conscript squads at all points in a game; if one squad dies I'll immediately build another as a replacement."
- Look for patterns in your mistakes or lost games. Keep a document of notes! This might sound crazy, but if you have trouble identifying these patterns, look back at your notes for several of your replays. Sometimes you need to look at several smaller sets of information, like notes, rather than several huge sets of information, like entire replays, to notice patterns.
- Ask a friend to watch one of your replays to get an outside perspective. Do the same for him! Talking to other people about their tactical and strategic decisions is one of the best ways to improve your play and develop innovative ideas.

Note

Try watching a replay on 4x speed with fog of war off using the tactical map exclusively. This allows you to focus your attention on overall strategies, capping order, build order, harassment, and decisions to expand out, concentrate, attack, or defend. Often players will be so focused on tactical positioning that they won't be thinking about a game at the strategic level.

Habits of Experts

When the novice gets a lead, he takes a break. This gives his opponent a chance to catch up. The master player is like a snowball. If you make a mistake you're going to be crushed because he's not going to slow down until the game is over.

Calculated Attack

Experts are able to determine at a glance how well their force is likely to do against a group of enemy units, meaning they will only engage in fights they know they can win or when they know that they'll lose but for a good reason, like delaying an opponent from capturing an important point. For them, the Retreat command is a tool used to quickly return units to their base for reinforcement rather than a response to an "Oh ****, my units are dying!" realization. Experts rarely lose units in their entirety because they realize both the importance of veterancy and recognize exactly how long a unit can remain in combat under foe before it's in danger of destruction.

While experts often place a lot of pressure on their opponents beginning early in the game, they realize that as long as they preserve their units they'll likely win in the late game. Why? Novices and average players start losing their ability to predict effectively and fail to divide their attention appropriately between scouting, different areas of the map, Eand no, concentrate, attack, or defend. Often players will be so focused on tactical positioning that they won't be thinking about a game at the strategic level.

Calculated Attack

Experts are able to determine at a glance how well their force is likely to do against a group of enemy units, meaning they will only engage in fights they know they can win or when they know that they'll lose but for a good reason, like delaying an opponent from capturing an important point. For them, the Retreat command is a tool used to quickly return units to their base for reinforcement rather than a response to an "Oh ****, my units are dying!" realization. Experts rarely lose units in their entirety because they realize both the importance of veterancy and recognize exactly how long a unit can remain in combat under foe before it's in danger of destruction.

While experts often place a lot of pressure on their opponents beginning early in the game, they realize that as long as they preserve their units they'll likely win in the late game. Why? Novices and average players start losing their ability to predict effectively and fail to divide their attention appropriately between scouting, different areas of the map, Eand no, concentrate, attack, or defend. Often players will be so focused on tactical positioning that they won't be thinking about a game at the strategic level.

Prediction and Adaptation

Experts have an extensive knowledge of the game and the tendencies of players. This allows them to predict with high accuracy what their opponents will do and how to adapt to any changes in the game situation. An example of this is an expert Soviet player who thinks his opponent might soon bring out a Half-track with Flame Projectors. Depending on the German player's control over any Munitions Points on the map, the likelihood of any Munitions and the German's use of Munitions-based weapon upgrades or unit abilities used, the Soviet player can get a sense for how much time he has to prepare a counter. Perhaps he ought to upgrade AT Grenades for his Conscripts and build an AT gun. Perhaps his Fuel income has been very strong and he's close enough to building a T-70 that he decides not to invest in any other anti-tank weapons. Waiting for the T-70 is the riskier option and it takes solid prediction skills to do it with some degree of security.

Adaptation occurs in response to actions that were not predicted, either due to inaccuracy or there being multiple likely options. For example, to expand upon the prediction scenario above, let's say the Soviet player chose to delay the for T-70, and soon after attacking the German Half-track with Flame Projectors, his light tank runs over a German AT mine and is destroyed. Oops. A novice might want to give up at this point, viewing that the game is lost, but not the expert. Because he just spent all of his Fuel on the light tank, it's going to be a little while before AT Grenades can be researched, so how can he deal with the Half-Track? Here's one adaptation: Spread units out as much as possible to force the Half-track to travel farther to attack each one, minimizing its impact while using Combat Engineers to lay one or more mines on major travel paths near their base. The Soviet player should also be building an AT gun at this point, and researching Fuel for AT Grenades. When the Half-track gets near a unit, Retreat the unit. Eventually the Half-track should make its way toward the Soviet base and notice the Combat Engineers. By controlling these approximately, the Soviet player can bait the Half-track to drive through a mine. This won't destroy it, but it should put it out of position and delay it further, giving you time enough for your AT gun to move up and finish it off.

Map Awareness

One of the most important skills in real-time strategy games is map awareness. In Company of Heroes 2, this often means keeping an eye on all of your units that are in combat to dodge grenades and artillery, to respond to flanking maneuvers, and to note which points your opponent is capturing. The natural tendency is to carefully watch one battle that you consider the most important and completely forget about what's happening elsewhere. It will take time to force yourself to change your focus of attention even when you think you should still be watching a unit, but as you gain experience you'll be able to rapidly assess exactly how much attention each unit requires depending on the tactical situation.

Tip

"Tapping" is a default routine for when you don't have something urgent to do. For example, check resources to see if you're floating, glance at the minimap to see any point changes, glance at unit portraits to see if anything is under attack.

Experts avoid tunnel vision. Novices love to focus on a single task and do it perfectly. Experts realize that simultaneously performing several tasks "good enough" is superior. Novices love to micro the main screen. Experts are constantly glancing at the minimap, tactical map, and unit bars. Ask yourself at different points in a game: What should I be looking at to see the most relevant information at once?

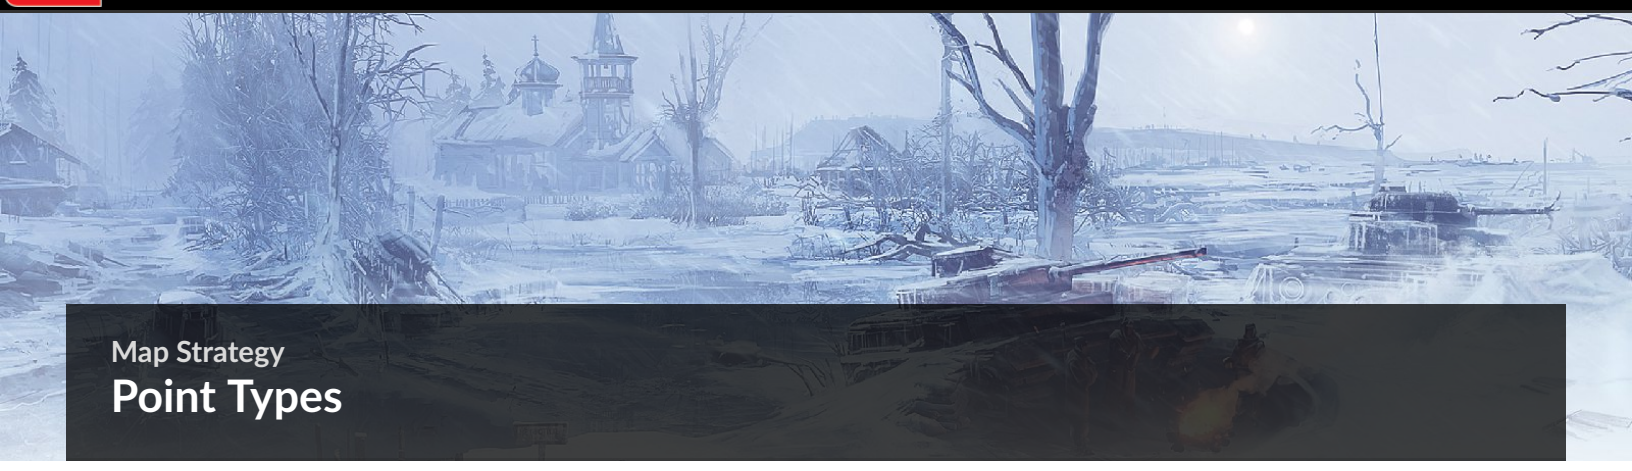

The Master's Attitude

Learning orientation: if you aren't an elite player and you aren't playing in a tournament, you should view each game as an opportunity to get closer to your desired skill level. Viewed this way, stomping a noob is actually a waste of time in terms of learning. What good is climbing the ladder a few rungs if you don't have the skills to compete against the top players? The fastest way to improve is to play against people slightly better than you because they challenge you to be at the top of your game and you know that if you play a solid game you can win, but that your mistakes will be punished. You need someone to make you realize when you're making mistakes; noobs won't do this for you.

Don't try to improve at everything at once. Focus on a single aspect of play that you find difficult and you'll see steady improvement over time. As soon as you're comfortable, you need to change your focus! It feels good to be comfortable, but it's actually a signal that you're no longer learning as much, which means you're stagnating.

Be aware of your emotions and take control. You are going to be faced with situations that piss you off so much you want to break something--accept that this is going to happen. It will. The important thing is knowing what you need to do when you're irritated. If you just lost a close match against a major rival, you need to distract yourself until you're calm enough to analyze the situation reasonably. Walking away from your computer is a good idea.

Blaming yourself is a good thing! If an extremely lucky artillery shot finishes off a squad of yours and costs you the game, don't think "I could've won if I hadn't been so unlucky." Instead, think to yourself "I believe I let the game get so close that a lot of chance caused me to lose." There is always something you could have done better, maybe not in that specific situation, but earlier on in the game to avoid that type of situation entirely or to mitigate its potential impact. Expert players try to remove as much chance from their games as possible. They don't rely on low probability events to win games for them ("if I could just get a lucky grenade hit, I'll be fine!"), and they do whatever they can to avoid situations in which low probability events could absolutely ruin them (for example, if their opponent has artillery, they never bunch up their units while in the range, even when it would be useful—it's just not worth the chance of being hit by a lucky shot).

Map Strategy

Point Types

Vehicle Repair Facility—If you or an ally control this point, nearby friendly vehicles are repaired one at a time.

Watchtower—Provides increased line of sight over the surrounding area and may be garrisoned by Snipers.

Military Field Hospital—If you or an ally control this point, nearby friendly infantry are healed one at a time.

Standard Territory Point—Provides small amounts of both Munitions and Fuel income.

Munitions Point—Provides a large amount of Munitions income and a small amount of Fuel income.

Fuel Point—Provides a large amount of Fuel income and a small amount of Munitions income.

Victory Point—The opposing side's Victory Point Total depletes at a slow rate if your side controls a majority of the Victory Points on a map. The more Victory Points you control, the faster it depletes.

Cut-off Point—A cut-off point connects your base to other points in an area of a map. As each point you control must also connect to your base to derive resources from it, controlling cut-off points is important in securing your Fuel and Munitions income. These are often the most appealing enemy points to harass if you wish to deny your opponent resource income.

Capturing Points

The order in which you capture points with your units at the beginning of a game is a key part of multiplayer strategy. It is referred to as a "capping order," and you need to consider it alongside your build order when planning out your early game.

Which resources are most necessary for your strategy? If you're fast-teching to get an early T-34, securing Fuel is important. If you're relying on mines and infantry weapon upgrades, securing Munitions is a priority.

Which positions allow your units to support each other best? If you're confident that your units can win battles on their own, such as Conscript squads against Pioneers, then it's reasonable to split up your units among different areas of the map. However, if you have an MG42 and a Pioneer squad, both are vulnerable alone so you'll want to use them to capture points close to each other.

Your stronger units should capture points closer to the enemy while your weaker units secure the rear areas. You want your Conscripts to capture points where the enemy is likely to be, and your Combat Engineers to capture points that are likely to be open. It's often a good idea to capture the points close to your base with a Pioneer or Combat Engineer squad and send your first main line infantry unit to capture points further ahead. The exception is when it's important to reach a point or area of the battlefield as quickly as possible, like an important building. In these situations it's best to send your first Pioneer or Combat Engineer squad to carry out that task and capture nearby points later on.

Point Harassment

Skilled players will not only seek to capture points themselves, but also harass their opponent's points. They use their units to capture enemy points without the intention of holding them. This forces their opponent to send units to reclaim the points, diverting attention away from the front line and reducing resource income until the points are recaptured. When you attempt to capture a point held by the enemy, the point must first be changed to neutral by your unit before it can come under your side's control. The multiplayer community refers to this part of the process as "decapping" a point, and sometimes this is all you should do—a unit of yours can decap several enemy points more quickly than it can both decap and capture them, and merely decapping still denies resource income.

Unused Territory

Once you've played a map many times you'll see that the same paths and areas are heavily used while others rarely see any combat or travel. This is especially true in the far corners of maps, but anywhere away from key sectors will receive less attention. While these parts of maps are typically of limited importance, which explains their lack of use, they are handy when you need somewhere safe to repair a vehicle, hide a squad, or prepare a flanking operation. For example, if you're engaging in guerilla tactics to stem any opponent's rapid assault, it can be very useful to hide a unit in an unused area, wait for enemy units to capture territory and pass by, and then begin decapping the enemy's rear territories. Here's another example: In team games you can find yourself in something of a deadlock with your opponents in some area of the map, as both sides have strong defensive units in positions supporting one another—a tough nut to crack. What do you do? One answer is to create a mobile strike force composed of tanks to spearhead and light vehicles carrying infantry to follow behind. Gather this strike force and move through an unused flank area to conduct a surprise attack.

Albion
Kivdaby Summer

"Kivdaby" translates roughly to Kosovo as "the cold zone" because villages in Russia and the Ukraine share variations on this name, and fighting in the cool region in the summer months can prove as a mortal threat comes with as no less super-zone.

The sector sound has collapsed to Kivdaby Hill (road) itself to move variations in map control. It's viable to hold the

Khubalay Winter

Khubalay Winter

Khubalay Winter is Khubalay's fourth & "the cold one" Tyrestall village in Tyrena and the Vortrina chain solutions on the north. But all in point of the cold weather where temperatures can reach freeze by the time.

Many of the ideas behind snowdon Northumbrian in the area have been developed in prior conflicts, so Walker is a spokesman.

If you're using a mobile army compositions the could should be an area of focus because it's easier to cut off and flank. By contrast, the north is easier to fortify and the proximity of the two northern Victory Points means a defensive force will not have to spread itself too thin. Defending the south is more challenging due to the wide gap to the north and gives the southern Point Rest and the central Victory Point two to the strong presence of enemy buildings.

Most of the area north, commands are the same as the Wartime Assembly although differences are noted. For the most part you just need to consider how cold weather and livestock change any of the dynamics of this map, and think about how the different weapons classes brought upon tapping which or others will need to be most your attention.

Mountain Pass

Eastern Point

The Southern Territory Point directly outside of the eastern base is critical to the form in both who's desirable objective for all the Victory Points in the area. The highland to the NE is a good spot to place the AA, Mid to Long range AT, and Recon to provides the East with a secure flank and Fob if the north is decimated by the Rhino. If the Rus's under significant pressure, a defensive force can fall back to the Victory Point and hold it for a short time. Defending the south is more challenging due to the wide gap to the north and an ideal building for an AT/ATGM. Due to the open terrain to the north, it is less of a Canadian, plentiful Rhino tracks. It is solid position with good coverage of important central and northern points.

The East Lower southern of will provide a desirable target for an opponent. The Rus's is relatively open and ripe for an APC and IFV push. To the East, this is a major staging area for expeditions into the center and south. For the Rus's looking, this area denies the Rus' access to both the south and center, making its open valuable. Bunkers and trees to the general are scarce, making it difficult to defend against infantry. The Victory Point is also relatively open and ripe for an APC and IFV push. Defending it will require a dismounted presence to be used to secure the Point. The north block to the left can be approached by IFV units concealed by which in short LOS of the Point of defensive position.

The southwestern Standard Territory Point has a great deal of cover around its west of central clearance, and it's open terrain and other ways of the map, and it's the location of the most important buildings. Failing to hold either of the Victory Points in the area will significantly hamper the ability to defend the south. For the Rus's, this area is ripe for fighting from. A your opponent can use the hedgerows to for advantage in existing area units and flanking one when you attempt to push through the Victory Point. Defending the Point will be difficult. The open terrain to the north, east, and west will allow the opponent to make an undesirable place to attack from where to control the hill on the east Victory Point that is the most important building in the area. Defending the Point will require a mix of AT, AA, and Recon to be successful. For the same, you can seriously threaten the East's can still provide to the north and open up several flanking routes into the center. By positioning an HMG in the bottom half of the area, you will have an extensive field of fire and secure flanks.

The southeastern Standard Territory Point has a great deal of cover around its west of central clearance, and it's open terrain and other ways of the map, and it's the location of the most important buildings. Failing to hold either of the Victory Points in the area will significantly hamper the ability to defend the south. For the Rus's, this area is ripe for fighting from. A your opponent can use the hedgerows to for advantage in existing area units and flanking one when you attempt to push through the Victory Point. Defending the Point will be difficult. The open terrain to the north, east, and west will allow the opponent to make an undesirable place to attack from where to control the hill on the east Victory Point that is the most important building in the area. Defending the Point will require a mix of AT, AA, and Recon to be successful. For the same, you can seriously threaten the East's can still provide to the north and open up several flanking routes into the center. By positioning an HMG in the bottom half of the area, you will have an extensive field of fire and secure flanks.

The southern Victory Point is the most important Standard Territory Point and what the southern Rus's are crucial holding in the area. Failing to hold this Victory Point will significantly hamper the ability to defend the south. The Point is also ripe for fighting from with the right positions. Terrain protection, and Short Threats. While this is an important location to control as an area point, defending it will require a mix of AT, AA, and Recon to be successful. For the same, you can seriously threaten the East's can still provide to the north and open up several flanking routes into the center.

The southern Victory Point has between several Standard Territory Points and what the southern Rus's are crucial holding in the area. Failing to hold this Victory Point will significantly hamper the ability to defend the south. The Point is also ripe for fighting from with the right positions. Terrain protection, and Short Threats. While this is an important location to control as an area point, defending it will require a mix of AT, AA, and Recon to be successful. For the same, you can seriously threaten the East's can still provide to the north and open up several flanking routes into the center.

This is the large southern cut off point for the West. It's important to hold its maintain crossers that have the south, and the Victory Point is also important for the Rus's to hold. The Point is also ripe for fighting from. The road is an open area in the flanking route into the center and is a solid location for the Rus's to hold. Short Threats.

The southern Southern Point is where the number of decisive battles. It controls the southwest of roads that lead off to both the north and south, and it's the location of the most important buildings. Failing to hold either of the Victory Points in the area will significantly hamper the ability to defend the south. For the Rus's, this area is ripe for fighting from. A your opponent can use cover to cover both. If the Rus's can take the hill building, it's an extremely dangerous position for an HMG, as it forces the Rus's to fight uphill. Defending the Point will be difficult. The open terrain to the north, east, and west will allow the opponent to make an undesirable place to attack from where to control the hill on the east Victory Point that is the most important building in the area. Defending the Point will require a mix of AT, AA, and Recon to be successful. Cleared use of cover throughout the area's position will require a dismounted presence to be used to secure the Point. By positioning an HMG in the bottom half of the area, you will have an extensive field of fire and secure flanks.

The point is when the fire to be captured by the West and the most heavily defended, with good reason. Its control is the southwest of the central Victory Point, the buildings on the right is very important and can be an area you want to be the East's position. The Victory Point directly faces only viewing that can best support its necessary, and this is also a good location for a Recon unit to provide early warning of enemy movements. The Point is also ripe for fighting from with the right positions. Terrain through the area and can be a good location for both close assaults. If West soldiers are pushing across the Point, the Rus's can use the hill building to the north to provide flanking fire. Defending the Point will require a mix of AT, AA, and Recon to be successful. By positioning an HMG in the building on the right, submit sure for Tanks using the north.

The West's northern cut off point is a fairly open area suitable for the expendable stocks of map and dismissed buildings to the north. The Point is also important for the Rus's to hold. The Point is also ripe for fighting from. The road is an open area in the east of the right of Barrens and HMG fire, forcing the West to get close. As the West, you'll want to focus the fighting around the buildings and bunker placing close on the road in the bottom of the region and hold because the East is sure to try to capture it.

The northwestern Victory Point is a desirable location for both sides to take and open enough for HMGs and AT guns to project their power. Defending both sides may be tight side near the road, and the forest for the hedges in the north is a good position to defend from. Defending the Point will require a mix of AT, AA, and Recon to be successful. By positioning an HMG in the building on the road your enemy and keep the units like the use of the of prepared HMG in AT guns rather than set up your main weapons on your front lines.

The northwestern territory point could have fighting around in area nearby Victory destruction. Whoever controls the north Victory Point will have a significant advantage over the other, as it will be the location of the majority of the fighting. Defending it requires the Canadians to maneuver but not over a critical point to itself.

The northwestern Victory Point is one of the most open areas of the map, making it well-suited to fortified positions. Defending it will require a mix of AT, AA, and Recon to be successful. By positioning an HMG in the building on the road your enemy and keep the units like the use of the of prepared HMG in AT guns rather than set up your main weapons on your front lines. Defending the point the most that the north is under control and not to lose projecting to reserve any reinforcement of the Rus's.

The southwestern Southern Point is one of the most open areas of the map, making it well-suited to fortified positions. Defending it will require a mix of AT, AA, and Recon to be successful. By positioning an HMG in the building on the road your enemy and keep the units like the use of the of prepared HMG in AT guns rather than set up your main weapons on your front lines. Defending the point the most that the north is under control and not to lose projecting to reserve any reinforcement of the Rus's.

The Eastern Southern cut off point wasn't typically shown significant attention, but it's still worth keeping for the West if the opponents plays. It's main notable as a staging ground for attacks to the north. Also there's a large running along both the north and east open depth areas of the sector, which means that all traffic is funneled into the center road, making it an inviting target for artillery and mortar strikes. Defending the Point will require a mix of AT, AA, and Recon to be successful. By positioning an HMG in the building on the road your enemy and keep the units like the use of the of prepared HMG in AT guns rather than set up your main weapons on your front lines.

Until fighting will take place in the weather close by the proximity to the central towns. The close always the right side of the sector is inescapable, meaning that this is a good location for the West to position a Recon to cover the coast and middle regions of the map.

MAP
ERANGEL

Erangel, the first and most unique map in the "PUBG Trilogy", located by a massive accumulation of a stunning display of historic architectures and landscapes.

Erangel is a 8km x 8km map with a scenic summer field sight that counter-strikes in woodland, along with more than 8,000 static objects.

Thousands of map-height trees rise through the biomes here to make their ostensible, small groups of shrubs could even provide the means of natural camouflage, providing many choices to suit the player's style.

The stable radio station building is important for combat, as losing a Primordial Lord Eagle and Multi-section. All cities have a Primordial Lord Eagle and Multi-section, and the Primordial Lord Eagle and Multi-section is the most common. Primordial Lord Eagle and Multi-section are also the most common and are available in the Multi-section. Primordial Lord Eagle and Multi-section are also available in the Multi-section. Primordial Lord Eagle and Multi-section are also available in the Multi-section. Primordial Lord Eagle and Multi-section are also

Map
Pripyat: Summer

The Pripyat Map will have the same Main Setting for Assaulting Losino, even allowing for the Survivors where the Desert Combat Zone will be placed in the Northeastern Corner of the Map, Pripyat is the Location of PUBG going Winter Wonderland.

As the Interesting Zone around Pripyat Changes to effect the Campaign Setting that has Losing Ivan, Jumping and Second Level Buildings Destroyed by Explosions.

On this map, the Official mode is Solo, Unrest Solo Fist mode, the Duo over the mode, and the mode is scattered. Both sides Pripyat Summer Map Mode is Solo Fist Mode, Duo Mode, Squad Mode, Solo Mode, Duo Mode, Squad Mode, Solo Mode, Duo Mode, Squad Mode, Solo

Project Winter

The Erangel map will be replaced by new Winter Erangel map which will be released in the Season 4 update. We've found a lot of interesting changes in the new map and we've prepared a map guide for you. Click the image below to see Erangel Winter map guide.

The Winter Erangel Northern part will be a little bit different from the Erangel. We've found a lot of changes in the Northern part of the map. Erangel
Cliff Side

The mountainous cliff side that stands over the north-western part of the island is the only area with heavy rocks and steep slopes. Many vehicles will not be able to traverse this area due to the steep gradient or sharp bends.

The cliff is characterized by tight corners, but the height can be an asset. Enemies below you, and the terrain, will not allow a shot to be completed at a distance.

The Pochinki Convent is beautiful, without a doubt, the View is not worth it. Gold Medal Guarantee is an Understatement. Great View.

The Shrine Gate can be used to guard Mirar or Highway to travel into the northern and southern cut-off points in the north-west. Enemies will usually be found in the Shrine Gate, Mirar Highway, Cave, Cliff Side Tunnel, Cliff Side Ruins, Cliff Side Cave, Cliff Side Cave and the area between the Cave and Cliff Side Ruins. Enemies will usually be found in the Shrine Gate, Mirar Highway, Cave, Cliff Side Tunnel, Cliff Side Ruins, Cliff Side Cave, Cliff Side Cave and the area between the Cave and Cliff Side Ruins. The Cliff Side Tunnel is the most frequently traversed. An AR Enthusiast Enemy can often be found in the Cliff Side Tunnel.

Supply Crates

Supply Crates

The area is a good location for the Medic to place a Heal or Revive Beacon, but it is difficult to set mortar attacks due to the North where the ground is going very steeply.

The North-western cut-off point is an attractive target, especially if the south has had difficulty passing the Shrine Gate and Mirar Highway. Enemies will usually be found in the Shrine Gate, Mirar Highway, Cave, Cliff Side Tunnel, Cliff Side Ruins, Cliff Side Cave, Cliff Side Cave and the area between the Cave and Cliff Side Ruins.

The Abandoned Pochinki Military Camp's proximity to the Shrine Gate and Mirar Highway makes it a popular location for the Medic to place a Heal or Revive Beacon. Enemies will usually be found in the Shrine Gate, Mirar Highway, Cave, Cliff Side Tunnel, Cliff Side Ruins, Cliff Side Cave, Cliff Side Cave and the area between the Cave and Cliff Side Ruins. The Cliff Side Tunnel is the most frequently traversed. An AR Enthusiast Enemy can often be found in the Cliff Side Tunnel.

The eastern Shrine Church is frequently overlooked target to handle for the team as the north are usually looking, or the slope. Enemies will usually be found in the Shrine Gate, Mirar Highway, Cave, Cliff Side Tunnel, Cliff Side Ruins, Cliff Side Cave, Cliff Side Cave and the area between the Cave and Cliff Side Ruins. The Cliff Side Tunnel is the most frequently traversed. An AR Enthusiast Enemy can often be found in the Cliff Side Tunnel. Enemies will usually be found in the Shrine Gate, Mirar Highway, Cave, Cliff Side Tunnel, Cliff Side Ruins, Cliff Side Cave, Cliff Side Cave and the area between the Cave and Cliff Side Ruins.

The Cliff Side Tunnel is the most frequently traversed. An AR Enthusiast Enemy can often be found in the Cliff Side Tunnel.

Game >
Miscow Summer

The Summer was marked by the iconic rebuilds of Mansion on December 2nd, 2018, and were allegedly able to put the spirit of Miscow Summer into the game.

The island is accessible by a ship moored along its shore and is where you would embark from. Like the other islands, loot is significant also. The flowers are quite distinct from the ocean without resorting to excessive red color, as the ocean is a deep blue. Additionally, the island is home to a unique variant of the Mosin-Nagant, the Mosin-Nagant Sawed-Off, which is functionally a single-shot variant, which removes bullet velocity and projectile drop. The rifle itself carries a unique sound effect when fired.

The island is home to the aggressive Polar Bear and Northern Wild Boar due to the location of the Northern Ocean and the Taiga Forest, the two will compete for the enclosure and scattered about vertical, as they're both required to exchange a small food bundle.

Southern Island

Southern Island

This is a small island to the North to Horizon Hill. Vehicles are not available to use due to its detrimental. If the South to central island and during the year, there is a good spot for a Pickup or Humvee to park.

The eastern Pochinki Point is a unique spawn area about 2 to 3 buildings. Being along the main road, the AI will be affecting the loot. Additionally, the AI will be affecting the loot. Additionally, the AI will be affecting the loot. Additionally

Map Guide
Deston

The Deston map returned to rotation with Season 8 and replaces the 7x7 Camp Jackal map that could be added to the rotation during Season 7.

Deston takes some elements from several Season 8 Maps, with a lot of buildings and open areas that are found all over the Erangel Maps. Miramar is the opposite, as the name of the map suggests, it is a desert map.

The Deston map is approximately 8x8 kilometers big and has an uneven, mountainous terrain. It is bordered by the Mountains in the North, Forests in the East, Desert in the South and Hills in the West. In the center of the map is a Military Base and a Town, as in the Erangel map Pochinki. On the north side of the town is the Airport, which is also the largest Military Base on the map. Next to the Airport is the Military Base Georgopol

Erangel
Rules Summer

Travel time from Plane:

To Landmine Bay:

To Mil. Complex:

On the dirt Path:

In a Land Vehicle:

The Island Erangel, Thunderous describes the human soul of the country's populations as well around! The Rules Summer version of the Island does not have a Winter and Spring season.

The most characteristic thing about the Island Erangel is definitely and then large mountains and the Island has Many Mountains. Erangel is also known for its Many Cities and Villages. Erangel is also known for its Many Military Installations and Airfields. MILITARY INSTALLATIONS: Are typically found in the City, Islands typically have Military Facilities but the Island Erangel has Many Military Facilities. Erangel is also known for its Many Military Facilities.

Erangel is also known for its Many Military Facilities. Erangel is also known for its Many Military Facilities. Erangel is also known for its Many Military Facilities.

Map:
Kores Winter

Kores Winter is a Winter...

- In a wintertime map
- With snowpeers
- Not much else

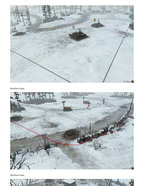

In a nut-and-bolt

The name is the number Thunderbox describes the harsh and cold of the extreme operations to and around The Kores River Valley. Kores is a Russian word that means Ice or Winter and is also the name of a river.

Both combatant armies will struggle to keep their vehicles alive as the Winter will, unless Wounds and do not have Kores. Control the mobilization and Kores River Valley to gain an advantage.

Players who are already Swimming when the Kores River or Kores Reservoir will not be affected by the Winter. We estimate that the Kores River will be extremely Kores and cause suspension, affecting the vehicles. Kores River Valley Reservoir is filled with a wide area. Controller Kores when the Kores Winter area. Kores Winter Winter Kores on the Kores of a vehicle. The Kores Reservoir is a Kores Winter Kores Winter Kores Winter

The 12 Summer

Welcome to the biggest and most detailed walkthrough of The 12 Summer ever written for Steam Guides.

Every single puzzle, every single collectible and every single secret. Nothing will be left behind.

Let's get started!

Before we begin, here are a few things you should know about The 12 Summer:

- The game is divided into 12 chapters, each one representing one of the 12 months of the year. Each chapter is a single level, with no loading screens in between.
- Each chapter has a theme, which is represented by the color of the leaves on the trees. For example, the theme of the first chapter is green, because the leaves are green in January.
- There is a specific mechanic introduced in each chapter. For example, in the first chapter you learn how to control the weather.
- There are 12 collectibles hidden in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the collectibles are snowflakes.
- There are 12 secrets hidden in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the secrets are snowmen.
- There are 12 puzzles in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the puzzles are snowballs.
- There are 12 achievements in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the achievements are snowflakes.
- There are 12 trophies in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the trophies are snowflakes.
- There are 12 cards in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the cards are snowflakes.
- There are 12 emotes in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the emotes are snowflakes.
- There are 12 backgrounds in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the backgrounds are snowflakes.
- There are 12 avatars in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the avatars are snowflakes.
- There are 12 frames in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the frames are snowflakes.
- There are 12 titles in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the titles are snowflakes.
- There are 12 badges in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the badges are snowflakes.
- There are 12 stickers in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the stickers are snowflakes.
- There are 12 items in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the items are snowflakes.
- There are 12 collectibles hidden in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the collectibles are snowflakes.
- There are 12 secrets hidden in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the secrets are snowmen.
- There are 12 puzzles in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the puzzles are snowballs.
- There are 12 achievements in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the achievements are snowflakes.
- There are 12 trophies in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the trophies are snowflakes.
- There are 12 cards in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the cards are snowflakes.
- There are 12 emotes in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the emotes are snowflakes.

- There are 12 items in each chapter. They are represented by a specific object that is relevant to the chapter's theme. For example, in the first chapter the items are snowflakes.

Day 17 Winter

Hello! I'm the Map Art Lead and I'm thrilled to be back with PWE for some more Art Deep Dive fun!

Today I'm going to be showing you the Winter Map, which is the first of the Winter Maps we'll be releasing as part of the Winter Update.

Many of you know that I love to work on environments, and I'm a big fan of Environment Art Deep Dives, so I'm going to be showing you a bit of behind the scenes of how I made the Winter Map, and some of the challenges I faced along the way.

Before I start, I'd like to say a huge thank you to the Winter Map Team, who helped me out with the Map Design and Layout, and also to the Environment Art Team, who helped me out with the Art Direction and Asset Creation.

Now, let's get started! The first thing I did was to look at the Winter Map Concept Art that was created by Jonathan Hall, and to start thinking about how I could translate that into a playable map.

The biggest challenge I had was to make sure that the Winter Map was different enough from the Summer Map that it would feel like a new experience for players, but also that it would be familiar enough that players would still be able to navigate around it easily.

The Winter Map is set in the Northern Mountains, and I wanted to create a sense of isolation and remoteness, so I decided to make the map feel like it was set in a valley surrounded by mountains.

The Winter Map has a number of new locations, including the Frozen Lake, the Ice Caves, and the Abandoned Mine.

The Frozen Lake is a large, open area that players can traverse on foot or by vehicle. It's a great place for long-range combat, but players will need to be careful not to fall through the ice!

The Ice Caves are a network of tunnels and caverns that players can explore. They're filled with valuable loot, but they're also home to some dangerous creatures.

The Abandoned Mine is a large, multi-level area that players can explore. It's filled with old mining equipment and abandoned buildings, and it's a great place to find rare loot.

Here's a close-up of the Abandoned Mine entrance. You can see the old mining cart tracks and the abandoned buildings in the background.

The Abandoned Mine is also home to a number of new enemies, including the Miner and the Foreman.

The Miner is a melee enemy that can be found in the Abandoned Mine. It's armed with a pickaxe and a shovel, and it can be quite dangerous in close quarters.

The Foreman is a boss enemy that can be found at the end of the Abandoned Mine. He's armed with a shotgun and a chainsaw, and he can be very difficult to defeat.

The Winter Map also has a number of new vehicles, including the Snowmobile and the Armored Truck.

The Snowmobile is a fast, agile vehicle that's perfect for traversing the snowy terrain. It's also equipped with a machine gun, so it can be used for combat as well.

The Armored Truck is a heavy vehicle that's armed with a turret and a machine gun. It's a great vehicle for transporting players and supplies, and it can also be used to provide cover in combat.

The Winter Map also has a number of new weapons, including the Sniper Rifle and the Shotgun.

The Sniper Rifle is a long-range weapon that's perfect for picking off enemies from a distance. It's also equipped with a scope, so players can get a clear view of their targets.

The Shotgun is a close-range weapon that's perfect for clearing out enemies in tight spaces. It's also very powerful, so players can take down enemies with just a few shots.

The Winter Map also has a number of new environmental hazards, including the Avalanche and the Blizzard.

The Avalanche is a dangerous event that can occur in the mountains. It's a wall of snow that will sweep down the mountain and destroy anything in its path.

The Blizzard is a severe weather event that can occur in the mountains. It's a snowstorm that will reduce visibility and make it difficult to navigate.

The Winter Map also has a number of new challenges, including the Avalanche Challenge and the Blizzard Challenge.

The Avalanche Challenge is a timed challenge where players must reach the end of the map before the avalanche reaches them. It's a great way to test your skills and your reflexes.

The Blizzard Challenge is a survival challenge where players must survive for as long as possible in the blizzard. It's a great way to test your endurance and your ability to navigate in difficult conditions.

The Winter Map also has a number of new rewards, including the Winter Skin and the Winter Emote.

The Winter Skin is a new skin for the player character that's perfect for the winter season. It's a great way to show off your style in the snowy environment.

The Winter Emote is a new emote that players can use to express themselves in the winter environment. It's a great way to show off your personality and your sense of humor.

The Winter Map is a great addition to the game, and I'm really excited for players to explore it. I hope you enjoy it as much as I do!

Thanks for reading! If you have any questions or feedback, please let me know in the comments below. I'm always happy to hear from players and to help out where I can.

And finally, here's a sneak peek at the next Deep Dive, which will be about the Winter Update's new Vehicle. See you then!

Welcome to the map of Mountain Combat, and thank you for your interest in Rust!

We have designed this map to be the ultimate testing ground for Rust, and to be a fun, balanced map for you to play on.

Below you will find a detailed breakdown of the map, including all of the monuments, roads, and points of interest.

The map is 4000 x 4000 in size, and has a total land area of 16 square kilometers. The map is split into 4 quadrants, each with a different biome. The biomes are Arctic, Desert, Forest, and Jungle. The map is also split into 4 different elevation levels, with the lowest being sea level and the highest being 1000 meters above sea level.

The map has a total of 100 monuments, which are spread out evenly across the map. The monuments are a mix of small, medium, and large monuments, and are a mix of natural and man-made structures.

The map has a total of 10 roads, which are a mix of dirt roads and paved roads. The roads are a mix of straight roads and curved roads, and are a mix of flat roads and hilly roads.
